From: clinton.peebles@saloon.bcbbs.net (Clinton Peebles)
Subject: Want to build Yagi

GRH>I'd like to build a simple, cheap 2 meter Yagi antenna,
GRH>just for fun, just to experiment. Where can I find a
GRH>fairly cheap (or free??) set of instructions or diagram?
GRH>Thanks.

September, 1993 issue of 73 Amateur Radio Today has an article for a 7
element 2 meter yagi out of an old TV antenna. I've had mine in the air
for about 4 years now and it works great.

Newsgroup names form an index. Do you think librarians should shelve
books according to the whim and in-jokes of those who know a subject,
or according to a relatively objective system that's helpful to both
those who know and those who don't?

It appears, to judge from e-mail I've gotten from two sources now,
that the "boatanchor" name has a decades-long history and is widely
recognized in the journals of the field. If anyone who knows could
take a break from the one-upmanship games to document this, it'd go a
long way toward settling the question.

Most of the Hamfests I have been to lately have had a lot
of older computer equipment in it and if I were you I think
I would investigate that before I would double space a drive
that will slow that 286 right down.

I don't think remarks of this type are going to win friends and
influence people. While I participate on the existing boatanchor mail
list, I've also paid my dues as a Usenet administrator.

You may rest assured that anyone who operates a Usenet setup, provides
spool space, newsreader access, etc., is affected by creation of
newsgroups and their charters, no matter what the topic.

Steve's points are well taken.

We have gotten to the point where we are haggling about a nonexistent
RFD. I think we need to see the details of a proposal to see what is
included and what is excluded from discussion, etc. as much as anything.

From my perspective, and that is the perspective of an engineer who was
designing some of this stuff when it was new, the term "boatanchor" is
by no means universal, ancient, or even applicable to all older
electronics. I have never heard an engineer or technician refer to a
grid dip or a meter as a "boatanchor," and, indeed, these devices tend
to be rather small. I don't think you can get consensus from even
dyed-in-the-wool hams on just what older equipment is a "boatanchor."

I think some of the hams might consider that a lot of the activity on
the current "boatanchors" mail list is from non-hams, and that any
parallel Usenet group should expect some level of non-ham participation
by technically-proficient people who have interests in older
electronics.

There also remains, in my mind, some very real doubt that there are 150-200 votes out there for the group among the hams. I would suggest that the proponents consider getting a proposal together as an RFD and getting it posted, and spend time building support for the idea, rather than calling people "outsiders" and making blanket statements about what's acceptible and what is not. The current hassling over the name of a completely unproposed newsgroup is not going to win friends and influence people, and taking the attitude of "hell no, our minds are made up" is going to inspire "no" votes to come out of the woodwork when, as, and if, the thing does go through the RFD/CFV process.

So far as I know, there is no draft charter, no draft RFD, and neither David Lawrence (tale) nor group advice have commented on anything---we are simply sitting here hypothesizing on how many 35Z5's are needed to power an 813 final amplifier. And there are an awful lot of people on Usenet who don't know a 35Z5 from an 813.

As I understand it, the process for creating a newsgroup is to draft a charter and post an RFD, then listen to the comments, showing some indication that you are considering them rather than rejecting them out of hand, then finalizing it as a CFV. I'd suggest to the proponents that it is time to pursue the normal process rather than hypothesizing.

>: HTEXT.

One of the better features of Gold software is the ability to set up TNC files which can configure your TNC any way you like. At cold start, the file RESET.TNC will be read into the KAM's memory; at warm start, STARTUP.TNC will be read in, and at program stop, SHUTDOWN.TNC will be read into the KAM. You can make and use as many others as you wish.

Edit these files to include the desired settings, and the reload will be automatic.

HTH
(I run PkGold.)

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
May 19th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 400 sellers and
free, off-street buyers parking!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Pacific and
Landsdowne streets in Cambridge; half a block off
Albany St near Central Square from 9AM to 2PM,
with sellers set-up time starting at 7AM.

!! RAIN or SHINE !!

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

>> Any comments or advice plse....subbustr@whidbey.net

Dave.

It will work fine, but you would loss about as much as you
good gain. DOS 3.0 is less than a meg, and 6.22 is just under
6 meg. I doubt you will get "full doubling" (ie; 40 meg), and
with the additional time it would slow down the drive, I just
dont see it working out well for you.

It also typically adds 50% to seek time, so if you have a screamer,
say 8ms, it will run at about 12ms. Not bad you say, but that curve
is not linear. As you go up, say an old 22ms MFM drive, you are now
up to a staggering slow 33ms!

But none the less, it will work. Drive/Double Space are software
compressors, and wont effect the "media" or mechanics of
the hard disk.

Take care, and good luck.

And if someone can show that "boatanchor" is widely recognized among radio amateurs who are not native speakers of English, that would help with me.

How about rec.radio.amateur.equipment.obsolete? There are probably other kinds of obsolete equipment besides boatanchors, but if this discussion is any indication, I suspect that such a group would be de-facto dominated by boatanchor traffic.

Just how old are you (I'm trying to figure out if I'm completely screwed
or not)? It may very well be true that there'll be nothing left for me
when I turn 65 (70, 75?), or that I'll have to rely on my own savings
to retire. So what?

[snip snip]

: =paul=

... which gets back closer to the original postings:

You go to a gathering of hams, and see a lot of grey hair. So what?
Frankly, I'm more concerned that one can go into most churches and see
a lot of grey hair. Or civic organizations. Or a lot of other places.
The problem isn't one of insufficient number of youth in ham radio;

it's a problem of too many youth into non-productive and counter-
productive activities. Ham radio used to be a place for young people
to get a start in doing something productive -- whether it be the
technical aspects of the hobby, or in developing communications and
interpersonal skills. Maybe we should be more concerned with trying
to restore that (an everybody wins situation) than with starting
or fighting an intergenerational war.

Just my $.02

While that's technically true, I can't get very excited about one more fourth-level group considering the eight thousand other groups I'm carrying - and that's a fairly small feed by current standards. Face it, the world is *not* sitting on the edge of its seat WRT newsgroup names any more.

Maybe people admining sites that carry only the rec.radio.amateur hierarchy or some similarly small feed feel differently (not a poke at Henry, I don't know what site he admins) but anyone who's anything like a full-spectrum carrier just doesn't have time to worry about anything as trivial as a single group in a well established hierarchy like rec.radio.amateur.

Lighten up folks, this isn't real life, it's just Usenet.

Xtians is slang for Christians. Just as Xmas is slang for Christmas.
Granted you dont see it often, but its commonly known.

Take care.

The Stamp Faq is done very well and I like to see it here every month.
Perhaps Mr/Ms Anonymous should quit playing with the anonymous servers
and find a real ISP and get rid of that 300 baud modem. Netscape is
pretty slick these days. :-0
Alternatively LOSA can be reduced to a one page summary with just the
http or ftp pointers and maybe an automated email return mailer (like
archie).

The main reason I like to see this faq is because with a Stamp a
person new to electronics can actually be up and running in a couple
of hours and that includes putting all the parts together on a
breadboard.
My stamp I works fine with my 8-bit PC running Dos 3.x and I had
a simple test program running inside 10 minutes. Most of the commands
are rather simple to use and it's a great way to get into building robots.
(I think this applies to most of the other newsgroups listed in this
post's header.)

Also I would like to thank Christer and others like him for their
time and effort in providing these faqs for the rest of us. It sure
helps us a great deal with our hobby or work projects. Thanks!

Yes but you have to study 255 Charecters in morse roughly 50,
much less. And for ANY char in ASCII it takes eight ceros and
ones (eg. 01001110, di-da-di-di-da-da-da-di) where in morse it
would take less than five (numbes 3 ...-- di di di da da) for all
letters is lees than 5, even the e is just . di

So as you wish... :)

BUT Cw is the mode to play with minimum help. You just need a
font of RF and connecting and disconnecting it, comsuming much
little energy. Remember that even ASTRONAUTS HAVE to know it, the
last way to exchange info, IF EVERYTHING ELSE FAILS.

I remember an article in a publication that I think was from
the IEEE. I remember a test of transmission from one floor to
another. As I remember the conclusion was that the signal went
down the hall, out the window, down the building. in the window,
down the hall and to the receiver. I wish I knew where that
article was.

Why not just wait until May 31 to mail your application? If the call is your Uncle's old callsign, unless you have other relatives that are hams, you are the only one who can get the callsign in Gate 1. So if you don't send it until June 10th I don't think it would make any difference.

Source record: 225531

Here the situation, I'm just starting in on this radio thing and I'm having a problem figuring out what is best. I started with a couple of 49 MHZ radio shat in pocket communicators so I could play paintball and talk to another member of my team at the same time. I quickly found out that the refs use the same frequency and that the rang and clearity wasn't that good. I nneded something that would work better since I didn't have time to play around with things while I was playing paintball. I also tryed to use these in the car since we travel in multiple cars a lot and I thought it would be nice to be able to talk to each other. At any rate this didn't work. I returned them and figured I would give a CB a shot. It started out really good, then I realized that the CB (a hand held one) would be great for paintball, but not very good for the car since it picked up every little electronic devise in my car, since I have a stereo well over $1000 and an alarm to guard it along with a radar detector to watch for police oh and I can't forget about the pager and cell phone. Anyway you get the point, I'm into electronics. So now I hear all about these HAM radios, and VHF. How far can they reach and what kinds are the best, how much do they cost, where can I get them, are there a lot of people using them? You get the idea, I have no clue about them. I know I need a licencse and that's about it. Some one has been a great help to me so far, any more help would be greatly appreciated. I am extreamly interested in what the benefits are off having the VHF as opposed to the CB. Well please get back to me, one of the more important things is cost and range. I want to creat a docking station for it for my home and for my pickup truck. I am very interested on how far people think they can go. Please email me at bprender@lynx.dac.neu.edu with any help. I don't read these all the time so I would probibly miss any resonse to this. Thanks for any help at all......

>don't acknowledge the existence of physical and mental handicaps. To the
>best of my knowledge, no one gets to pick whether they have Parkenson's
>or not.

Your father's condition, while unfortunate, is still not a reason to elimnate motorcycle driver's or CW tests. The fact that you'd think it is, is quite frankly incredible!

If I was physically unable to pass the tests for a private pilot's license, I certainly would not expect the FAA to loosen the restrictions until I could! The tests exist for a reason, safety. If I can't fly safely, WHATEVER THE REASON, I don't get a license. Nothing more to it than that.

CW tests existed for a reason, emergency communications. If I couldn't provide those emergency communications, WHATEVER THE REASON, I didn't get a license. This is no longer valid now that CW stations aren't required on board ships, and THAT is why we should start thinking about no more CW tests.

>When are all you normally-blessed people going to stop repeating the lie
>that "Anyone can learn to ride a motorcycle or do CW"?

Maybe when people stop trying to drag us all down to the lowest common denominator. Political correctniks would have no one better than anyone else, and the only way they can do that is to make sure everyone is equally dumb, equally incompetent, equally handicapped. Does that sound like a good, progressive, world that will improve the human condition?

>sure of the spelling.

Nope. I have some dictionaries and know how to use them. I wouldn't use a word if I were unsure of the spelling and then attempt to excuse myself by embedding a marker in the text. I'd look it up - as I would if I found a usage that I didn't understand. 8-)

> But I am not sure, with all this Generation
>X stuff, maybe it has something to do with that.

I'm a little old for generation X. Not too young to have done a little reading either. You will find that this usage more common (although archaic) among people who have some academic or institutional (church) interest in the subject. You can find an interesting discussion of the etymology of this particular usage in the OED (Oxford English Dictionary). (As I recall it also mentions that some prefer the form Xian.)

In an earlier posting, one "Drew in Florida" suggested that he would derive pleasure from a tire iron, but seemed to lack the imagination as to how best to use it for maximum effect.

Said tire iron would perhaps be best applied by him inserting it in his left ear, and driving it with a large mallet until it emerges from his right ear and pins his head to the ground. The driving should continue until the driven end is flush with the scalp.

His loss of brain function ensuing from this presumably pleasurable experience will in all likelyhood not be noticed (certainly not by those who know him from his postings on Usenet), but the resulting immobility will, one hopes, prevent him from reaching his keyboard to further spew his hatred and bigotry worldwide on this newsgroup.

I believe this could be considered the Florida version of seppuku. And he will put himself out of our misery. Honorably.

1. If you are paying 15.3% you are self-employed. There are damn few
minimum wage employees that are self -employed. Otherwise you pay
7.65%. If you are self-employed, and you apparently are, there are
special deductions you can take to offset your tax rate. Get the
Social Security Pub. 05-10022.

2. Social Security checks do not go out to all retiree's. Those who
have too much current income (from a job or self-employment) cannot
qualify for any benefits. In addition, couples with a combined income
from all sources > $44,000 pay federal tax on 85% of any benefits
received. So it goes right back to the government. How would you
know who in Florida is on SS anyway? Just because they seem to be
retired doesn't mean they are drawing any benefits.

: I think it was something about grey hair at ham gatherings...

: Oh REALLY? Thanks for speaking for ALL OF US under 40 (don't let the
: QCWA life member in the .sig fool you -- I am still under 40).

My mistake I should have said, "MOST ALL of us..." if I was really snide I might have said, "anyone under the age of 40 who has a clue..." No offense. I 'm glad you have faith in SS being there for you. I simply don't believe it.

: May be true from some standpoints, but years of telling people that
: it's a mandatory, government-administered insurance policy seems to
: make that a bit of a problem:

Hey I said, "we have to take care of the people in the system." I believe I also said it's not their fault the trusted the government to provide cradle to grave care.

: you want someone to tell your survivors
: that your life insurance won't pay, just because the insurance company
: thinks they don't need it? Sure, let's apply a "means test" to your
: family's benifits. While we're at it, why not for salaries, too?

That's also one of the problems the SSA caused is turning the program into life insurance instead of old-age supplimental income.
I said I'd walk away from it if the government would let me. And as far as salaries go, if my employer were to give me a means test, I could walk away from the job and find something else. We don't have that option with SS.

: Just how old are you (I'm trying to figure out if I'm completely screwed
: or not)? It may very well be true that there'll be nothing left for me
: when I turn 65 (70, 75?), or that I'll have to rely on my own savings
: to retire. So what?

I'm 38. "SO WHAT???!!!" So how about you mail some money to ME if you don't care if you ever see it again?

This is an interesting discussion. I don't see it as any arguement either. I'm one of the cynics that thinks SS is money down the drain (to me).

>

But I draw your attention to the bias of the individual who wrote the
results of the survey. Quoting from the published survey:

"Modal Efficiency

This argument is based on a technical point of view and correctly so.
Mathematically, it can be proven that a station operating Morse Code at,
10 - 20wpm (words per minute), and designed around this requirement, will
indeed have the highest system gain of any other mode available."

This is a patently false statement. Although he subsequently states that
in practise this is not true, Coffman has on a number of occaisions
demonstrated mathematically that Morse code does not have the highest
system gain of any other mode available. This individual made a
representation of facts that are untrue - both theoretically and
practically that Morse code gets through when all other modes fail.

It was the author of the survey who claimed the mathematical robustness
of Morse code. My response is that he is ignorant. If you don't believe
there is a relevancy, and I agree with you that there is none, then take
it up with the originator, not me. My point was that he failed to engage
his brain before publishing this drivel.

>In addition, those of us who use
>: these modes would tend to agree that Morse code is no longer the most

No doubt that it is slow, but robust? I suppose that depends on one's opinion. (What is the measure of rosbustness anyways?) Primitive, I will grant you, just at semaphone and heliotrope based communications are also primitive, but primitive communications doesn't necessarily equate to robustness. Otherwise, Morse code would not be experiencing its noticable decline.

I'm not a big CW fan per se, but I learned it! I can copy 25 wpm with no problem after about 18 months of NOT practicing. It's not brain surgery. Once you learn it, you never forget it! I'm tired of the complaining about making amateur exams easier. It's not whether it's hard to learn; it's whether one has the motivation to learn it. I'm for keeping the code. I think it's a real badge of honor in our hobby.

>needed.

I think this is a tough sell. You would have to convince the neighborhood that there's a reasonable possibility that electricity and both wired and cellular phones will all be down at the same time, and that for some reason, they or a neighbor would be unable to go for help. You would also have to convince them that the ham next door has full emergency capability, that he's prepared a team to canvass the neighborhood for emergencies in the event of a disaster, that he has the equipment to communicate with the appropriate emergency communications centers, and that those centers won't also be off the air in the face of a disaster this severe. In addition, you would have to convince the ham's immedate neighbors that his antenna will functionally survive such a disaster, rather than simply falling on their house.

Considering that most people in metroploitan areas where the restrictions are the most severe have no memory of such a disaster ever taking place, I don't know how you would do any of this.

They could always go with an "alt" group, but the risk there is that many
sites make it a policy NOT to carry the alt. groups.

I have been following this discussion, and it seems to me that, here we have
an individual who is trying to do the right thing, but is getting
stonewalled for his efforts. Little wonder that usenet is often referred to
as anarchy.

For anyone at "group-advice," which should be a responsible party, to
threaten "NO" votes is the ultimate in ego. This dog-in-the-manger attitude
is childish. The only appropriate name for this proposed group is
"boatanchors." Group-advice IS an outsider, in the sense that only hams
will use this proposed newsgroup.

In response to Tom Randolph:
You miss the point entirely. The issue of Morse Code has absolutely nothing to do with its usefulness as a mode. And hasn't since at least 1980.The issue is deregulation, an easing of requirements, both code and theory. In addition, simply because the Morse Code is being abandoned by the military is no reason for Amateurs to abandon it. That's because Morse Code serves in a far greater role for the Amateur Service. THAT'S the issue.

I have a Realistic/Tandy HTX-202 2M transceiver and I have a big problem with it: When I was using the radio,
tuning up a PA, the final transistor said "goodbye". The PA transistor is a Motorola SRFH 1900. It doesn't
seem to exist in Norway. Have already tried to get the transistor from Tandy, but they will not send it to
Norway, because the radio only was for sale in the States. So if anybody know where to get this transistor or
any other transistor that would work, please let me know.

Thanks in advance

>SS? How much do you put in, A WEEK???
>

I know this doesn't belong here, but I think there is a great mis-understanding about Social Security payments and benefits. To be sure, the people who entered the program in the thirties, get far more than they ever put it. Most of those are probably dead by now. I went on SS last year. I paid the maximum into the system for at least 25 years. Between my employers and myself we put in nearly a quarter of a million dollars into the system. That doesn't count what went into Medicare. If you take that money at even 5% interest it would be impossible for me to ever get the entire sum back. Even at 0% interest, I probably won't come close.

On the other side, I have to agree with the younger folks that there should be limit on the amount of income a person can make from all sources and still get SS benefits. Only earned income counts at the present time, and I think it is deplorable that people with huge investments are drawing SS when they don't need it.

I would hope that the USENET community would understand and realize that the
term "boatanchor" is held near and dear to many ham radio operators. (Probably not).
Failing that, I would hope that the community would at least consider that a peculiar name
like rec.radio.boatanchor might mean something special to those who proposed it and, in
turn,
"let those who know - decide".

>Is the use of the exact name "boatanchor" so important that you would put at

Greetings.

I am posting this for a friend of the family, so please don't ask me
questions directly, although I can relay any questions.

Old QST Magazines for sale COMPLETE from 1921 through 1984.

From years 1921 to 1973, all are bound.
From years 1974 to 1984, all are in boxes.

I believe that it is prefered that the whole lot be sold as one, but
I'm sure some large subset can be negotiated as well. I was not given
any specific asking price, so you'll have to make an offer.

If you are interested, please send email to K3JJZ@usp.plf.com.
If you send me email, I will forward it to K3JJZ.

Thank you for your attention! Have fun!

How much rebar is in the concrete? We did some testing at work of 2.4 GHz low power freq hopping wireless data LANs and found that 2.4 GHz didn't penetrate concrete floors very well at all - really high attenuation. Someone suggested that the concrete might still have a high moisture content and 2.4 GHz doesn't pass through moisture all that well (e.g. microwave oven effect).

Source record: 225597

Has anybody had any problems with recieve on their Alinco DR 130T ???

My radio TX's perfectly....switches back to recieve ok...and all functions work ok. THe only problem is that no recieve signal 'gets' into the speaker. Ie, I can transmit on a rig 2cm's away from the Alinco and the Alinco will not respond to this signal whatsoever.

The problem occurred over about a weeks duration. At the start of the week the recieve took about a minute, from power up to activate. Over the next few days, this activation time increased until, by the end of the week the receive was no-existant and the radio is currently useless.

Has anybody experienced this on their Alinco DR-130T. I suspect the uProccessor or the switching diodes..but I am not game enough to work around the SMD's. Any help would be appreciated.... Michael VK3KKH.

Well, Gee Whiz. If you spent some of the time you waste shooting off your mouth here learning something useful, you might be able to get a job that pays 'real' money. Then that wouldn't be a problem, would it.

You seem to have plenty of 'free time'. You 'could' be using it productively improving yourself, rather than whining about why you can't.

>At least a couple of these groups (the rec.radio.amateur ones)
>are gatewayed to mailing lists, and posting large items to them
>is guarenteed flame bait.

The fact that some newsgroups are gatewayed to one or more
mailing lists should not be a consideration to what gets
posted to any newsgroup. As long as there is reasonable
subject matter related to the newsgroup, the various net.censors
should have nothing to complain about. If and when traffic
in any newsgroup is a problem for a list that rebroadcasts
as a mailing list, then the mailing list administrator has to
consider those situations.

In another post I commented that it isn't a poster's responsibility to
be concerned about those individuals that have a more
expensive access (time and usage charges, etc.) That's
true. IF you want to worry about the person that pays
more for access because of content volume, that's
fine, BUT the majority of net access isn't oriented that
way and it is, therefore, a personal decision if a poster
wants to minimize length. That's no different than
web page creation. Sure you can complain that some
web pages have too much graphics to download,
but that is a matter of the web page creators choice.

The internet is open to many, some have limited
access (low modem speeds, etc), but that shouldn't
limit posting by the vast majority. I once only had

a 1200 baud modem, I upgraded, so did millions of
others. That is the evolution of technology. So be it!

Bill Sohl (Amateur Radio Operator K2UNK)
Internet Instructor, Mount Olive (NJ) Community School

Vanity call signs are here and so is Hamvention '96. The stories on
both on Newsline report number 978 coming your way right now!

(*****
VANITY CALL SIGN FILING GATE 1 OPENS MAY 31

The long awaited vanity call sign program is almost here! As reported
last week, the FCC has announced that Gate 1 of the procedure opens May the
31st.

For hams wanting a vanity call sign, the magic date is May 31st. That's
when Gate 1 of the FCC's Vanity Call sign program opens. That means that
on or after the 31st, you can request a call sign previously held by an
individual, a club, or a deceased close relative. You'll pay $30 and
you'll file using FCC form 610-V.

The Commission says you should check its call sign database to make sure the call sign you want is not already assigned. Callsigns are normally available two years after a license expires, is surrendered, is revoked, set aside, voided or if the licensee dies.
Here are the rules about requesting a vanity call sign for your primary station. You must already hold an unexpired amateur operator/primary station license. You may request a call sign that was previously assigned to your primary, secondary, repeater, auxiliary link, control or space station. You can ask for your former call sign even though it has been unassigned for less than 2 years. The 2 year requirement does not apply if the call sign was previously assigned to a station of the requester. You do not have to hold a class of operator license required for the call sign group you are requesting. Also, your mailing address does not have to be in the region designated for the call sign you're seeking. The Commission says a call sign requested by a former holder may be in any region.
If you want to apply for the call sign of a deceased close relative, your current amateur radio license must also be of the proper operator class. That means if your relative was general class ham, you must also be licensed as a general class operator. A call sign requested by a close relative of a former holder who is now deceased may be in any region. And again, your mailing address does not have to be in the region for the call sign you seek. Just who is a close relative? The FCC says it can be a spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew or in-law.
If you're requesting a formerly held club station call sign, the Commission says you must also hold an unexpired club station license listing you as the trustee. You can request your club station's former call sign even though it has been unassigned for less than two years. The 2 year requirement does not apply to an otherwise eligible club station if the call sign was previously assigned to the club station for which the requester is the license trustee. And, in this case, your operator license class does not have to match that of the call sign you request. Your mailing address does not have to be in the region designated by the call sign being requested.
Now some advice about sending in the application itself. Again, you pay $30. You can send a check payable to FCC, a bank draft, a money order or a credit card. If you choose putting it on plastic, you must also fill out and submit FCC form 159 along with your Form 610-V. The Commission specifically says not to send cash.
Your application package should be sent to:

Federal Communications Commission
Amateur Vanity callsign request
P.O. Box 358-924
Pittsburgh, Pennsylvania
15251-5924

If you fail to meet the above eligibility standards, your application will be dismissed.
The next Gate is Gate 1A. Under that gate, club station trustees may

request the former call sign of a person who is now deceased, IF the club held a club station license on March 24th, 1995. The FCC says it will announce Gate 1A in a future notice.

For more information about the vanity call sign program you can call the FCC Consumer Assistance Branch at (800) 322-1117.

(*****
FCC MAY CHALLENGE ZONING ANTENNA RESTRICTIONS

Those concerned about zoning, deed restrictions and PRB-1 issues will be interested to know that the FCC appears to be considering a challenge to all state and local antenna ordinances. The statement appears to be a public answer to property owners who are organizing opposition to an FCC order that prohibits them from stopping the installation of pizza pie size direct satellite broadcast antennas, and appears to widen the scope of the FCC's thinking on the scope of its preemptive powers. The statement reads as follows:

"Consistent with the approach we adopted for DBS antennas in the Order and Further Notice, in this Notice we propose to adopt a presumptive preemption approach for all governmental restrictions on over the air reception devices, and a full preemption approach for non-governmental restrictions. We seek comment on these proposed approaches and on whether there is any procedural mechanism that might better effectuate the intent of the statute than the approach we adopted in the Order and Further Notice. We will incorporate in this proceeding any relevant comments received in response to the Earth Station Notice and the Order and Further Notice in IB Docket No. 95-59, so that participants in that proceeding need not resubmit or duplicate their arguments here." -- end quote.

Unless we read it wrong, it sounds as though the FCC is about to challenge an rule that prohibits anyone from installing any sort of antenna or support structure. Nothing is said about a challenge to deed restrictions, but they too may be covered once the scope of the FCC's preemption probe is known.

(*****
WISCONSIN PRB-1 BILL TO SEE ACTION

A bill in the Wisconsin legislature that goes further than PRB-1 in limiting local control over amateur antennas comes before that state's Assembly early this month. According to the ARRL Letter, Wisconsin Senate Bill 544 already has been approved by the Senate on a voice vote. Majority Leader Scott R. Jensen, who calls himself a strong sponsor says he looks forward to scheduling the legislation shortly.
Gary Schwartz, K9GS, has been tracking the bill. He says that it specifically says that towers may not be restricted on the basis of height or aesthetics. In fact, the only basis for restriction would be if there is a specific health or safety concern. The measure also says political subdivisions may not enact laws affecting placement, screening or height of Amateur Radio antennas if the ordinance or resolution is based solely on

aesthetic considerations.
Wisconsin State Representative Ben Brancel and Senator Richard Grobschmidt are the bill's sponsors. In a letter to other members of the Wisconsin legislature, they say that the bill is modeled after existing provisions of Wisconsin law that restrict localities from regulating certain satellite TV antennas. If enacted and upheld by the courts, it could become the model for hams in other states to follow in seeking relief from restrictive antenna regulations.

(*****
PHONE CHANGE

Bill Newkirk, WB9IVR says that Due to a PBX and other telephone changes the Melbourne, Florida Newsline number will change from (407) 768-7447 to (407) 953-1637 effective at 6 PM, May 10, 1996.
Also, a reminder that the Hollywood (213) 462-0008 outgoing line terminates service on or about the 30th of May. California hams should use area code (805) 296-2407 after that date.

(*****
MORE TAMPA JAMMERS CAUGHT

A pair of especially foul mouthed two meter repeater jammers were handed over to sheriffs deputies May 8th after a local ham, believe it or not talked them into meeting him for a beer. Before it was over, one of the jammers went to jail for junk driving and the other is under investigation for interfering with emergency communications. A two meter handheld radio was recovered for finger and RF printing and it is suspected to be stolen.
Jim, K2UDP, did the fast talking and fast thinking on the 147.105 repeater. Twice luring the jammers to a bar of their choice as four other club members used direction finding gear to track the suspects.
Jim's persistence and smooth talk eventually were rewarded after two and a half hours during which the jammer calling himself Kevin said quote, "My mother didn't raise stupid kids."
Incredibly jammer Kevin then preceded to meet K2UDP at the bar. Jim says, Kevin claimed to be a general class ham who knew amateur radio, as Jim put it, to be dangerous. After the jammer expressed an interest in buying a hot radio, Jim ducked out of the bar pretending to get a hot radio out of his car and instead radioed the other amateurs who were watching his back to call police.
As luck would have it, the club group had met local deputies during previous direction finding efforts to find the same jammers. Aware that emergency communications were being interfered with, the deputies quickly responded and opened an investigation.
After finger printing the Radio Shack HTX-202 they planned to pass the recovered radio on to the FCC for comparison against RF prints recorded over the bay area repeaters here in the last few months.
Earlier this year, Newsline reported the capture of three other Tampa jammers, but at deadline there is no word from the U.S. Attorneys office regarding possible prosecutions in those earlier cases.
Asked how the experience of, I your face, confront the jammer

negotiations had left him, Jim, K2UDP said he was saddened by it all. Sez Jim, the guy had me so upset for the last couple of weeks I wanted to reach inside the speaker and get my hands around his neck. Now, Jim added, it's just hard to believe a human being could do stuff like that.
We'll keep you up to date.

(*****
NEW INTERNET RADIO SERVICE

A new radio service is coming. On April 25, the FCC opened the door for wireless access to the Internet - but some of the frequencies being proposed include a microwave ham band. CQ VHF magazine Editor Rich Moseson, NW2L, spoke with FCC officials and says there's opportunity for hams as well as risk.

The FCC's Notice of Proposed Rule Making would permit unlicensed Part 15 devices to use two chunks of microwave spectrum including part of the 5cm ham band for linking computers to each other in so-called "wireless LANs," or Local Area Networks, and for radio access to the Internet. These devices would operate between 5.15 and 5.35 GHz, plus 5.725 to 5.875 GHz. This latter segment is part of the 5.65 - 5.925 GHz band currently available to hams as a secondary, shared, allocation. An FCC official told CQ VHF the proposal would not impose any limits on amateur operations on the band, noting that the unlicensed devices proposed for use there would operate at very low power, would have to accept interference from licensed users and would not be permitted to cause interference to current users.
Amateurs operating on the band must already accept interference from satellites, industrial, scientific and medical equipment, and must not cause interference to satellites.
What's the impact for hams? Not much at the moment, since there's very little ham activity on five centimeters. As for the future, while there's likely to be competition for frequency space from this new service if it's approved there's also the opportunity afforded by having big-name commercial manufacturers fighting over who can provide the lowest-cost equipment for access to the band. And we wouldn't even have to retune the gear!
The NPRM is ET Docket 96-102. Comment and reply deadlines hadn't been set by air time.

If this new 5 GHz service come into being it could mean a lot of low cost equipment that would be adaptable for loner range use by hams.

(*****
NC BALLOON

Dave Mullenix, N9LTD, of Easy Sat fame reports that the University of Wisconsin is in the early stages of planning a professional balloon launch. The launch will be from the National Balloon Facility in New Mexico, will go to about 150,000 feet and stay aloft for approximately 24 hours. The gondola will be stabilized and weight approximately one ton.
Dave tells Newsline that the planners are trying to make room for small, self contained modules from third parties. The modules will have to contain

their own power supplies and accept an on/off control from the gondola. The good part is that RF emission will be allowed, though on a strict non-interference basis. Since the gondola is still being designed, there's a good chance they can mount antennas for the modules as well.
Weight and size limits haven't been set yet, but the smaller the better. We're talking a few pounds, total, maybe 10 at the outside.
If the proposal is accepted by NASA, construction should start late this year with the launch about two years in the future. This means that it might be possible to include an Amateur Radio package if someone wants to build it.
If anybody has a payload that's going to be available in this time frame, please send information on it to N9LTD and he will forward it to the ham on the design team.

(*****
MID EAST COOPERATION

From the middle East comes word that ham radio activity between Israeli and Arab bloc countries continues to reflect the easing of tensions in the Middle East. The Israeli ham radio publication HaGAL International newsletter reports that Hams in the gulf state of Oman have proposed cooperation with Israeli hams in relaying traffic, and Oman has made available its satellite station. In addition, hams in Israel report messages from hams in countries that formerly would have nothing to do with Israel. Tunisia has rescinded its ban on contacting Israeli hams, and contacts with neighboring Jordan have become commonplace.

(*****
OIL SPILL HAM HELP

United Kingdom ham radio operators are being lauded for their involvement in the oil "clean-up" operation following the grounding of the tanker, Sea Empress. The GB2RS News Service says that forty-three amateurs who are members of Pembrokeshire Raynet, North Dyfed Raynet, the Carmarthen Amateur Radio Society Emergency Team and other radio clubs throughout West Wales took part in three weeks of work providing communications along the 30 mile stretch of coastline. The local Oil Pollution Officer, Barry Evans, GW0TVY, called out the amateurs when it was realized that the existing VHF communications and Cell phone network did not completely cover the area affected.

(*****
HAPPENING AT HAMVENTION '96

Finally, the 1996 Dayton Hamvention begins this Friday, May the 17th. Thanks to the date change it now appears that this could be the biggest Hamvention ever. How big? One posting on the America On Line ham radio bulletin board says that the nearest hotel rooms still available are an hour away in Indiana and Hamvention General Chairman Ken Allen, KB8KE says that a lot more hams from the far North are expected as well:

"We're expecting a larger ham contingent from Canada this year more than normal. That Monday is their Victoria Day. So it's a three day weekend for them. The reports we get from some of the folks we talked to threw the year in Canada said we should see better attendance from the Canadian amateurs." KB8KE

As has become tradition, many of the Newsline staff will be at Hamvention '96. You can meet them Saturday morning at 9:30 at the Hamvention Media Relations Forum being held this year at Meadowdale High School. Also Newsline producer Bill Pasternak, WA6ITF will be at the Worldradio and Ham Radio Bookstore booths part of the time. He says to stop by and say hello.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

>Did you know that 50 % of ALL U.S. Hams (about 340,000) are
>either No Code Techs, Novices, or Tech Plus?
>According to the A.R.R.L. that is true if I did my math right.
>That means one half of us are now operating at 5 wpm or less code
>speed.

Did you know that with the above grades of licenses you've got over
127 Mc available to you (as opposed to the 3.75 Mc reserved for Generals
and above on HF)? So the 50% who are Generals and above only get an
additional 3.75 Mc. Does that seem fair to you? How much more do you
want?

>My question is: Do we want to change the code speed so more of us
>can use the HF bands?

Nope. It's already too crowded, especially on weekends. But if you insist,
feel free to use 11M or 1750M - no code required to operate on those bands.

>Is anyone interested in helping me put together such an effort before
>the F.C.C.?

If you do put forth such a proposal, I predict the FCC will receive
1000's of letters during the mandatory Comments Period in favor of
keeping the code tests, and they'll conclude that the code tests are
still desired by US hams. That's what happened last time.

If you spend 1/10 of this effort on just learning code you'll be on HF
in no time.

Drew, you can drive your Viper on over 97% of the radio highways without ever having sat in a 75 Ford Pickup.

Our HF bands consists of a total of 3.75 Megacycles. Less than the 4 Mc width of 2M. You've got over 127 Mc available to you with your Tech+ ticket. Why complain?

Jim et all...

I think it's got something to do with the fact that you are working globally on HF and locally on VHF/UHF (generally speaking). Besides the UK and Japan, most HAMs in other countries don't have the luxury to be able to afford all the modern high tech wiz-bang rigs that you and I have access to here. Overseas, CW still maintains a strong hold with amatuers and proffessionals alike. While "we" here in the US have advanced beyond the need to rely on CW as a primary means of communications, other countries aren't that lucky. Times are changing, though, and eventually CW will be phased out for all but HAM's. But that's still a long way down the road & in the mean time it still serves a valuable purpose.

My favorite mode has always been CW, but I suppose I'm biased by the fact that it used to be my primary job in the military. I still enjoy making CW contacts and hardly ever use SSB on HF and don't much enjoy 2M FM or packet. I'm still wondering what advantages there are in packet, maybe you can fill me in. My father and I tried sending packet messages between Nebraska and Michigan for a couple weeks but only a few ever got through. Those that did were not timely at all. We are currently sending e-mail via the internet as a temporary fix until he can get his 80M dipole back up and then we can chat on HF (using CW, of course). :)

What is the challenge of picking up a mic and squaking out "VE3XJ monitoring" over a local repeater and having someone 3 miles down the road come back to you? Is this activity worthy of a QSL exchange? Maybe in the eyes of the new codeless hams, perhaps.

Where is the challenge in shouting CQ CQ CQ CQ CQ CQ CQ DE VE3XJ VE3XJ CQ CQ CQ... on HF? I don't believe there is any, really. Why not pick up a telephone and randomly dial long distance numbers. Someone will eventually pick up. I'm sure you'll learn all you need to know about someones hemroids or gall bladder problems. Enjoy!

And the least challenging of all (so far) is packet. Jeepers, what's that all about anyway? Why not just jump online and send message via AOL?! It takes most of the personal touch out of HAM radio, don't you think? Sure its useful, I'll give you that. I can leave a message on someones TNC, but then again, I could do that on their answering machine, too. Half the time, you're not even communicating with another HAM, it's probably just his TNC.

On the other hand, when I use CW (a signal which takes up less bandwidth than FM or SSB) to make contacts, both myself and the operator at the distant end need to be skilled (to some degree) in copying and sending CW. We both spent time searching the band, listening for a call or sending CQ until someone copied our callsign and responded. Someone that was skilled enough to know what the callsign was.

Here's something else to consider: language barriers. On SSB or FM, if you are working a HAM
from Russia or Argentina, they might know a few words of english -- do you know any words in
their language? I've worked a lot of foreign CW stations and using international Q-codes and
common HAM abbreviations, I've always been able to have pretty excellent QSO's. CW is an international "language" that's been around for a long time. Millions of people learned CW because they had to if they wanted to communicate.

CW is undisputably the grandfather of radio communications. It is an important part of HAM radio today and tomorrow. It certainly isn't the fastest nor the most glamorous mode of communications available, but it isn't used up and ready for retirement either.

After all the years people have been using CW, both proffessionally and for pleasure, why is it that now it's "suddenly" out of date? What is the problem with learning CW? Does it require too much effort? Is it going to harm someone? What is the basic malfunction with the new breed of would-be-hams?

When I was told drivers educations was a mandatory requirement before getting my drivers license, I took drivers ed. When I was told a vision test was required before I could get a drivers license, I took a vision test. When I was told that I needed a blood test to get married, I took a blood test. What is the REAL problem with the code test requirement?

73... Andy, KC6NMD.

> 73 and live better digitally
> Jim, VE3XJ

Oh, Jim, BTW, what exactly defines "digital" communications? Wouldn't you agree that CW is digital in the truest form of the word?

Jim et all...

I think it's got something to do with the fact that you are working globally on HF and locally on VHF/UHF (generally speaking). Besides the UK and Japan, most HAMs in other countries don't have the luxury to be able to afford all the modern high tech wiz-bang rigs that you and I have access to here. Overseas, CW still maintains a strong hold with amatuers and proffessionals alike. While "we" here in the US have advanced beyond the need to rely on CW as a primary means of communications, other countries aren't that lucky. Times are changing, though, and eventually CW will be phased out for all but HAM's. But that's still a long way down the road & in the mean time it still serves a valuable purpose.

My favorite mode has always been CW, but I suppose I'm biased by the fact that it used to be my primary job in the military. I still enjoy making CW contacts and hardly ever use SSB on HF and don't much enjoy 2M FM or packet. I'm still wondering what advantages there are in packet, maybe you can fill me in. My father and I tried sending packet messages between Nebraska and Michigan for a couple weeks but only a few ever got through. Those that did were not timely at all. We are currently sending e-mail via the internet as a temporary fix until he can get his 80M dipole back up and then we can chat on HF (using CW, of course). :)

What is the challenge of picking up a mic and squaking out "VE3XJ monitoring" over a local repeater and having someone 3 miles down the road come back to you? Is this activity worthy of a QSL exchange? Maybe in the eyes of the new codeless hams, perhaps.

Where is the challenge in shouting CQ CQ CQ CQ CQ CQ CQ DE VE3XJ VE3XJ CQ CQ CQ... on HF? I don't believe there is any, really. Why not pick up a telephone and randomly dial long distance numbers. Someone will eventually pick up. I'm sure you'll learn all you need to know about someones hemroids or gall bladder problems. Enjoy!

And the least challenging of all (so far) is packet. Jeepers, what's that all about anyway? Why not just jump online and send message via AOL?! It takes most of the personal touch out of HAM radio, don't you think? Sure its useful, I'll give you that. I can leave a message on someones TNC, but then again, I could do that on their answering machine, too. Half the time, you're not even communicating with another HAM, it's probably just his TNC.

On the other hand, when I use CW (a signal which takes up less bandwidth than FM or SSB) to make contacts, both myself and the operator at the distant end need to be skilled (to some degree) in copying and sending CW. We both spent time searching the band, listening for a call or sending CQ until someone copied our callsign and responded. Someone that was skilled enough to know what the callsign was.

Here's something else to consider: language barriers. On SSB or FM, if you are working a HAM
from Russia or Argentina, they might know a few words of english -- do you know any words in
their language? I've worked a lot of foreign CW stations and using international Q-codes and
common HAM abbreviations, I've always been able to have pretty excellent QSO's. CW is an international "language" that's been around for a long time. Millions of people learned CW because they had to if they wanted to communicate.

CW is undisputably the grandfather of radio communications. It is an important part of HAM radio today and tomorrow. It certainly isn't the fastest nor the most glamorous mode of communications available, but it isn't used up and ready for retirement either.

After all the years people have been using CW, both proffessionally and for pleasure, why is it that now it's "suddenly" out of date? What is the problem with learning CW? Does it require too much effort? Is it going to harm someone? What is the basic malfunction with the new breed of would-be-hams?

When I was told drivers educations was a mandatory requirement before getting my drivers license, I took drivers ed. When I was told a vision test was required before I could get a drivers license, I took a vision test. When I was told that I needed a blood test to get married, I took a blood test. What is the REAL problem with the code test requirement?

73... Andy, KC6NMD.

> 73 and live better digitally
> Jim, VE3XJ

Oh, Jim, BTW, what exactly defines "digital" communications? Wouldn't you agree that CW is digital in the truest form of the word?

Jeffrey Herman <jherman@Hawaii.Edu> wrote:

: There were also no A or N prefixes. All calls began with either W or K.

Minor historical quirk -- twenty years ago there WERE "A" prefixes...
20 years ago was 1976 -- the bicentennial celebration. There was a
mapping of W/WA/WB/K prefixes to A( ) prefixes that could be
optionally used. Of course, the printed licenses had the "real"
prefixes, but it was legal ID to use the substitutes.

In 1976, I was AB9BAP (my "real" call was WB9BAP until 1978, when I
traded it in for the K9-inital callsign).

Not that this actually relates to the "Callsign" discussion; just
thought you might find the quirk interesting.

A quick check of this call reveals "no code". If you can pass tech you can do the 5 wpm test. I BITE at code and still managed the 13 wpm. Be persistant and don't give up. You'll do it and it will mean more to you. If you don't then the code did it's job.

1096. gp300 programming, need help

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-15 00:00:00 UTC
From: holtzman@shazam.ecs.csus.edu
Message-ID: <4ndq0f$gib@csusac.ecs.csus.edu>
Source record: 225364

I'm having a problem programming (reading the codeplug) of a gp300. The problem is that while reading the codeplug, I get an "error 2", "no acknowledge". I've tried the s/w and RIB on different computers, lately on a Zenith XT laptop. The P200 s/w has worked on the same computers but not the gp300 s/w. The RIB is made by Polaris. Nine volts is being supplied to the radio and the "programming" pad on the circuit board is connected to the RIB's DB25 connector pin 15.

Scope waveforms on the programming pad seem to differ whether data is going to the radio or to the computer. There seems to be a difference in baud rates between the two directions. The programming cable is homebrew. Anybody out there have some ideas that would help?

Thanks - jrh

I was there a year ago. There are no repeaters. Yosemite is in a
caldera (depression) so you also get no: FM radio, AM radio (inday),
TV, cellular phones ...

There is a fire watcher on 146.520 who helped me out. I reported
a fellow driver broken down in park and he order a tow truck.

There are other business freqs. the park workers use on 160mhz.

OK, I took my Advanced theory test in front of an FCC examiner in 1968 at the Detroit FCC office. I didn't have to draw schematics, though; the test was multiple choice.

Where does that put me, somewhere between REAL Advanced and Advanced-minus? :-)

I agree that $14 is a bit steep, unless it includes some admission price as well.

At last year's Southwestern Division Convention, the price for registration was $10, which included admission to the Queen Mary, the venue for the event. It also subsidized the parking rate to where we had to pay only $1 for all-day parking.

snip snip

Quit complaining about those old fogies. After all, they are the ones that keep the Morse code requirement alive with their technical logic about "I had to suffer to get it and you young shitheads better pay your dues by learning something useless that will give you access to some HF bands"

So venerate those grey hair folks since they have the money to pay for the expensive HF toys. They also keep the image of exclusive snob hams alive. All the more reason to keep those CB minded filthy no code techs from their beloved HF bands. Of course the problem is that after they die, fewer people use the HF bands so we lose them to a sale by the gov't to some company that wants them badly.

So the bottom line is: Pay your SS dues happily and keep the impediments to a renewed spirit in ham radio alive. I have never seen or heard such a divisive issue as the Morse code debate. A house divided cannot stand and ham radio as we know it today is surely to die off in the future.

Enjoy folks.
73s Bill KB8UNC No code and proud of it
Engineer with a Master's degree but too dumb to learn Morse code.
Probably because I had to learn it in the Army (old draft days before your time) and now I have a hatred for it since it was forced on me.

>eyes.

You're missing the bigger picture, Drew.

The entire economic structure is designed to hide the true extent to which your earnings are being confiscated. If the government wants more revenue, it doesn't even have to tax you or your employer. All it has to do is print more money.

>I need help to change the CODE speed for ALL U.S. Hams to 5 wpm.
> KE4IKT@sco-inc.com

That has been my major idea for quite some years now, but has gone UN-responded to... first on LLBBS's then packet, and now internet. I feel that the speed requirement should be at of only slightly above the INTERNATIONAL requirement.... and the WRITTEN exam SHOULD, nay... MUST be a REAL exam.... KNOWLEDGE of TECHNICAL TOPICS, as well as INTERNATIONAL PROCEEDURES and PROTOCOLS !

Although I would strongly SUPPORT this position, I seriously DOUBT that the A.R.R.L. will Change.... until it is too late and ALL of their (our) spectrum is auctioned off to CELL sites and other HIGH-TECH interests... If "THEY" are truely interested in breathing LIFE and vitality into the hobby, this proposal is just the thing that will allow the intelligence to enter and revive.

Saad Mahaini <5606939@MCImail.com> wrote:

>Well, I became another victim, and I paid the price.

<good information deleted>

Your complaints should also be directed to Kenwood. You should state the following in writing:

1. You were charged for work that was not completed.

2. The equipment was returned to you disassembled (the parts bag).

3. The equipment was returned to you damaged (the eyelet).

4. Due to the incompetence of the Kenwood Authorized Service Center and the damages you've suffered as a consequence, you will not purchase any product in the future with the Kenwood name.

If Kenwood fails to resolve the issue for you after receiving this letter, the last statement above should serve as a future guide to yourself and others reading this newsgroup.

Also, Dallas has a number of city ordinances that govern things like deposits, estimate fees, estimate accuracy, etc. I was in the consumer service business in Texas for nearly 20 years and I would advise you to check these out. In addition, you should read the face of the service contract (the side with your signature) very carefully. Any conflict with either the charges you paid or local ordinances may be grounds for a request of treble damages.

You should also request a separate estimate from the company that is now servicing the equipment for their charge to repair the damaged eyelet (in order to restore the equipment to the condition it was in when you delivered it to Tucker). In the event this repair requires replacement of the PC board, you can add that cost to your claim. Incidentally, it is very inexpensive to sue in Small Claims court in Texas and you absolutely do not need an attorney.

Don't bother with the BBB. It is supported by businesses that subscribe as members. A company can clear a complaint by merely mailing them a written statement disputing your claims.

As a last comment, I don't suppose you paid the bill with a credit card? If so, you can request a credit to your account from your card issuer and Tucker will be debited the payment. The law requires that card issuers accept the card holder's statement as truth in these matters. If you took this option, it would transfer the burden of

pursuit entirely to Tucker.

The ARRL will change *what* ? Doesn't the FCC still set testing
requirments ? And you don't need a *code* test to get on UHF and VHF
anymore, so are you suggesting that somebody is going to auction off
HF frequencies to cellular companies ? Now that would be a handy
piece of gear, a 75 meter cellular phone. Think the antenna would
be a bit bulky ? Looks to me like you a grabbing one liners out of
the same old 'we don't wanna code test' argument and stringing them
together when they have nothing to do with each other ......

Not all countries need CW to operate HF. I know for example. Portugal
doesn't need CW. You can take it and it gives you more power and I think
able to operate 160m.

As for getting rid of CW. If you asked me 1 yr ago I would say SURE get
the thing rid off. Well I passed my CW about 3 weeks back and it wasn't
that hard. I was lazy to site down everyday and listen to CW for a few
minutes and all. I took the dip into the local night classes and after a
few months of going to class 1 day aweek(1 hr) I was able to get my CW
lic. As many have said, if you don't want to spend a few minutes aday and
study and not WORK for it, then that person shouldn't be on HF. And trust
me, I HATED the fact that I had to take the CW, but after doing it Makes
you realize how easy it is.

-- Is CW outdated?

What, exactly, does outdated mean? My dictionary defines it as:
"old-fashioned".

So What? A 1975 Ford Pickup Truck (or earlier year and make) is
old-fashioned. With its breaker-point ignition, lack of computer-
assisted engine controls, and carburetor-aspirated V8, it is merely
extremely reliable, user-serviceable, tough, and long-lived. Many
of them continue to soldier on, oblivious to their jelly-bean
shaped descendants. Even older vehicles enjoyed longer service
lives. Today's tinfoil and plastic will never give this value.

Canoes, sailboats, and bicycles are old-fashioned. Yet, we use
these things, and many other old-tech things in vast numbers.

Why? Because these simpler inventions serve us, for specific
purposes, BETTER than any new-tech device can. True, some of these
purposes are purely recreational, but some are not. You can bike
to work, save money, and decrease your risk of coronary, as many do.
You can canoe in wild, unspoiled places and increase your enjoyment.
A canoe is less costly, so your recreational dollar goes further.

CW is the bicycle, canoe, sailboat, motorcycle, and old reliable
pickup truck of amateur radio communication. Old-fashioned?
Maybe... but, for specific purposes, indispensable.

shane

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

The Right Thing [tm] when dealing with questions from news.groups is
to produce hard data. Data are good. Data are our little friends, and
we love them very much. :-)

So when someone says "hey, I think there's a problem with this name,
what's it's history?", tell 'em. Invoke the names of magazines where
it appears, write a sentence or two about its history, cite its use in
convention programming (if it's used there), and like that.

Nothing impresses a news.groups regular (at least this one) like solid
information presented concisely and courteously. Few things create a
negative impression like copping an attitude.

As I noted in an earlier post, many of us here on news.groups have
somewhat schizophrenic reactions. When people refuse to produce data,
rant on about the rightness of their choice, and like that, a kneejerk
negative reaction sets in. But come up with info, answer questions,
and like that, and you can watch the favorable reaction roll in like
the tide. We are wary of jerks, but eager to cooperate with anyone
who's got a clue and willing to show that.

And it _does_ help to keep in mind that the net's a big weird place
these days. Things that are obvious and familiar to me are strange and
new to others, and vice versa. But remarkably enough, good will
generally does prevail.

NOT GOOD ENOUGH! Morse is the oldest and proudest
tradition in ham radio. Some traditions are too precious to
discard (e.g., the nuclear family). Learning Morse should
be the entry ticket into ham radio. If you want to join the
fraternity/sorority, pass the entrance exam. 73, KB7ET

Hi Roland, 12 years ago all the W and K 1x3's were used up - none left.

When I got my General 20 years ago, we were given 2x3's (I was WA6QIJ).
There were no 1x3's for Generals.

Times change - blocks get used up. I wonder if we'll ever see a day
when one of the call districts will have to use a 1x4 or 2x4 format?

Very cheap: 32 cents to be exact. I was glad to dump the NH6IL call - N-calls remind me too much of my military days (having worked at NMC6 and NMO).

>The pool around gettysburg says Jeff will be getting vanity ah6fu

Cute, but no. I've got a list of vacant KH6xx and KH7xx calls picked out (Hawaii was given the complete KH7 block - that used to be exclusively for Kure Island). The AH6xx block is for Advanced folks. Us Generals get the KH6xx block. (Hear that Jerry? You'll get to start the false accusations all over again!)

The radio is very good as a mobile unit. It is not a replacement for a high-end home rig, though. The receiver doesn't have quite the front end I'd hope, and the noise blanker is fairly poor. It is very adequate for mobile use, though. All things considered, the radio is a very good deal - dollar for dollar, the way to play! For casual home use (i.e. non-contest, major DX, etc) it's fine, too.

> What type of antenna are you using and whats the max DX
> distance to date?

Hustler whip on my Jeep. New Zealand on 17m ssb while driving around Denver! A thrill, certainly! I find that if I can hear someone, I can generally work him -- which is the way things "ought to be".

I rarely listen to the CW on the HF bands, even use it less. But in any
case, CW will soon be only preserved in the amateur bands - all other
services have (or soon will) abandon it. Taken in its whole context of
the radio frequency spectrum, regardless of the allocations, the use of
CW is becoming anachronistic.

The point is that any amateur can operate without CW on VHF and UHF. So if they really want to talk around the world and such without CW, they can do so via packet or satellite on VHF/UHF. They want HF? Take a few months to practice.

>least 1980.

Vince,

I strongly disagree with this statement. Morse is the simplest, most basic means available for transmitting intelligence over radio. As such, it continues to be a valid prerequisite because experimentation and basic, low-cost communication are two of the goals of Amateur Radio. The simplicity and effectiveness of Morse are more compatible with those goals than any other mode.

The real question is whether the Amateur service continues to fulfill its intended role. Industry has long since overtaken the development efforts of the home constructor, and far fewer new licensees are interested in the technical side of the hobby than was the case only ten or fifteen years ago.

I believe that when the government abolishes the Morse requirement, it will be tantamount to an opinion that the service is no longer of use to anyone but hams themselves. Once that happens, there will be ample justification for total deregulation and Amateur Radio as we know it will cease to exist.

People who drive "old-fashioned" vehicles do so by choice. Fine, I have no problem with that as it is their preferred mode of transportation. In fact, my favorite vehicle of all time happens to be the 1977 Oldsmobile Cutlass Supreme.

But there is no law, MANDATING that someone prove proficiency in driving a 1975 Ford Pickup Truck before they are given the privilege of driving a 1996 Dodge Viper, now is there?

And that is as it should be.

How will removal of a required, radio-related skill result in greater intelligence in newcomers? Out of all the engineers I've talked to over the last thirty years who were not hams, Morse was absolutely *not* the primary reason given for not pursuing a license. In fact, most said they simply weren't interested, and they cited Morse merely as one more reason not to bother.

I can also tell you that *most* of the people I've met who claimed interest but blamed Morse for their inability to join were simply not telling the truth. As with the group above, their lack of interest and motivation was the real culprit. They wouldn't admit that to their Amateur co-workers though, and in some cases, not even to themselves.

The effectiveness can be demonstrated by the fact that weak signal
work can best be done with CW. Much UHF and Microwave work is done
using C W even though it is not "required".

I thought this reasoning explain why Hawaiian amateurs, even
those living in Honolulu, have a pretty easy time of getting
"official approval" for towers. I recall there was even a
specific exemption for mast type antennas under 35 ft high
from having to get them "approved." Of course, in Hawaii you
can buy T-shirts that say you survived the hurricane. OTOH,
if you want a big sign on your business or worse, an actual
billboard...

DX Bulletin 24 ARLD024
From ARRL Headquarters
Newington CT May 15, 1996
To all radio amateurs

SB DX ARL ARLD024
ARLD024 DXCC-SV/A news

The ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), has received a 9 to 7 recommendation from the DX Advisory Committee (DXAC) to make no change in the status of Mount Athos on the ARRL DXCC Countries List. The Awards Committee reported a unanimous vote to MSC in support of the DXAC to make no change at this time.

Since the DXAC and the Awards Committee are in agreement in their recommendations to the MSC, the matter is decided.

1156. Re: CW Outdated.

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-15 00:00:00 UTC
From: Vincent Biancomano <v.biancomano@ieee.org>
Message-ID: <4ndgde$lim@zeus.ieee.org>
Source record: 225443

In response to Jim Cummings:
Actually, the typical amateur at VHF does find cw vital, if
he or she is going to work some weak signal DX via tropo, sporadic
E, or the like. And not a contest goes by where at least one ham
doesn't apologize for his lack of skills when unable to completely
copy the call sign of a ham trying to work him crossmode. From that
standpoint, the phrase "it's not necessary to know cw at VHF"
isn't true!

> Jim, VE3XJ

I see some people just don't get it. Obviously Jim, YOU are the one who is biased and don't understand the issue. Mainly because you are quoting someone elses work without yourself showing any technical capability.

Do you even understand what system gain is?
Let's take an example in the real world. A cw rig with a 250Hz BW has a system gain advantage of 5.1 dB over the 450 Hz BW in the PK-232, all else being equal. Now, are you able to calculate this yourself, or do you need to go running off to someone else?

And system gain is only one small measure of a system, but this was the argument presented and this is what I stuck with. Further, to optimize the bandwidth, we could get down to 100Hz - and still be able to copy 20wpm, yielding another 7.95 dB of system gain, for a total of 13.05 dB. Remember, the argument also stated "mode available."

You have also incorrectly stated this is MY argument.
This was the argument of the respondants! Where is my bias, I supported it where appropriate, and refuted it where appropriate.

Efficiency is relative anyway. I can prove several ways in which cw is more efficient than any other digital mode currently available, some non-mathmatical. Now these will be MY arguments:

1) The cost of a computer, used - $500.00. Muti-mode TNC, used - $150 Let's make the software FREE! - Total $650.00 The cost of a straight key from Radio Shack - about $6.00 - $7.00. Which system is more economically efficient?

2) Under adverse conditions, the message being sent is:
The quick brown fox jumped over the lazy dog.

A digital system, such as AMTOR is going to grind away until the output is:
The quick brown fox jumped over the lazy dog.

The cw op may get:

Th_ qu_ck brown fo_ jump_d ov_r th_ l_zy dog.

The cw op has no problem in understanding this message and will quickly fill in the blanks without asking for a resend.
Which system is more robust in the area of fault tolerance?

3) Hurricane Andrew has just blasted through. You manage to save most of your equipment, but only have one storage battery and a small solar panel to charge it.

Do you operate cw with a straight key or bug, or run
your computer, tnc, and a printer??

Which system is more energy efficient?

4) Not difficult enough yet.
Let's go back to the hurricane, this time, only your tranceiver and
emergency power are available. Your mic is in a puddle, ruined,
as is your computer. Your TNC powers up, but you can't tell anything
else. Your cw key is also missing. So now what. Do you sit on your
duff complaining that you can't communicate, or do you fashion a key
out of scrap metal and get on the air?

Which system is more robust now??

5) Add to that the fact that cw is the ONLY digital mode that can be
copied both by machine and by hand makes it pretty damned versitile.
Let's see you copy CLOVER by hand....

Jim, you obviously don't understand all the complexities and goals in
designing communications systems. Indeed, if I wanted to design
a digital system that could operate in a 100Hz bandwidth, yup,
it would work great from a system gain standpoint. But, who the hell
would buy it?? Would the resultant throughput justify the
huge increase in cost. Besides, once again, I'll point out,
the argument was "MODE AVAILABLE." And of those mentioned, I specifically
pointed out CLOVER as being the best avaiable. But, it has two
serious drawbacks. It is expensive and propriatary to HAL. How
does that factor into efficiency? What are the odds of communicating
with someone else using CLOVER vs cw. Can CLOVER operate in a
net or roundtable mode?? Can this be a measure of efficiency??

BTW - if you would have CAREFULLY read my posting you would
have understood this was a class project. Further, if you would have
bothered to read the attached survey, it was made quite clear that this was NOT
a technical survey, but rather one of observation. It would have
served absolutely no purpose to run on for pages about symbol rate,
encoding/decoding techniques, link margins, etc.

The survey itself also pointed out that this was
NOT a funded research project, but a class project.

That's another point I wish to clear up. CLASS PROJECT, time and
resources were scarce. It was clearly addressed in the fourth
paragraph of introduction that there were severe limitations.
I am well aware that this was not a truely random sample.
So what would that take??

Someone said there was 600,000 U.S. hams. Okay, I'll buy that.
Now, we want to reach all of them. First let's print out the survey -
600,000*5 cents each = $30,000 - you got that kind of money?
Even if you could get a deal of 1 cent each, your still looking at 6 grand.

Let's add the cost of mail. I'm going to use the cost of first class postage
which should be roughly equivalent to the cost of printing and
paying for envelopes, along with using 2nd class postage.

1.2 million envelopes* 39 cents each = $468,000 OUCH! - even at half of that...
Yes, 1.2 million is correct, a return envelope is necessary.

So, who is going to put their money where their mouth is???

I had one semester to do this whole thing and little resources.
Therefore, I used the resources I had. Internet and packet access as well as my
local clubs. For whatever reason, I did fail to mention that.

As for those who think these were 54 self-selected replies?? Self-selected?
How the hell do you draw that conclusion? What makes YOU qualified to draw
such conclusions? That was all the response I got.
This is a really sad statement about the hobby in and of itself.

As for methodology, I followed standard practices the best I could within
the restraints given.

BTW - I made no claims that this was a definative survey, certainly not a
statistical survey. This was strictly a survey of observation, sociology,
specifically, anthropology.
It was much smaller than I would have liked and obviously you are
seeking something more, sorry folks. I took advantage of a situation presented to
me.

As it is, a friend donated space on his homepage so I could fullfill the promise
to those participants who asked to see the results. I did not choose the link wording
on his page. If that is what has you so damned worked up; At my request,
he is changing it - there, your spleen feel better now?

At least I DID something, you can't as yet say that. Was it perfect, hell no,
I know that. But the results are what they are, whether you agree with them or not.
But don't ever think you'll get away with unfounded statements such as my
being ignorant.

Regards,

Bruce, WB4YUC

Gee Drew, is it my imagination or do you just hate everyone? All this
from Sunny Florida. I'll make damned sure that the next vacation I plan
doesn't include your neck of the woods.

So tell me, are you financially secure enough to take care of yourself
when you become an old geezer? If not - who do you expect to take up
the slack? Just remember that as people get older their views of how
things are and how they ought to be seem to change dramatically.

Something tells me that you're just one of those people who lives for
confrontation. I'm somewhat the same but at some point you just have to
stop beating a dead horse and move on to something more intellectually
stimulating.

At least we all know why Drew hates "YE OLDE FARHTZ" (even though
he labels me as one, and I'm younger than he is, he's yet to
explain what that makes him.) It also explains Drew's obsession
with older people and why he never had an "elmer" when he got
involved in ham radio.

Sad. Truely sad. I wonder if Drew kicked his parents out, into the
gutter to beg for food and eventually die when they got "older".

But you are not paying it out of your pocket. And I disagree, based
on many years of corporate management, that the employer would add the
7.65% to your pay. Wishful thinking at best.

Just an observation -- I see that rec.sport.jetski just passed. I wonder how widely recognized "jetski" is among non-native-English boaters? It's not even in my Oxford American Dictionary, and the word is surely of much more recent vintage than "boatanchor." In addition, the rec.sport hierarchy is not nearly as focused as rec.radio.amateur.

Also, I have recently noticed that many of those who were/are skeptical have shown a sincere willingness to be convinced, and I would like to thank them for that.

Drew Durigan <VUBS79A@prodigy.com> wrote:
>Better tell that to all the military radio operators who have recently
>abandoned the code.

We are not the military. They have billions of dollars to spend on
redundant systems so that their communications are virtually immune
to disruption.

But just to cease the periodic comparison between hams and the military:
* We ragchew, they don't
* We attend hamfests, they don't
* We have on-the-air contests, they don't
* We exchange QSL cards, they don't
* We attempt to break records, they don't
* We QRP just for fun, they don't
* We build our own radios for fun, they don't
* We attempt to work EME for fun, they don't
* We attempt to work meteor scatter, they don't
* We consider radio and communications our hobby, they don't
* We install repeaters that duplicate coverage of existing rptrs
just for ego sake, they don't
* We have VHF/UHF antenna measuring contests, they don't
* We have problems with antenna restrictions, they don't
* We debate for years regarding the importance of one single mode, they don't
* We strap HTs to our belts to look official, they don't
* We have complete idiots who think "KH2PZ" isn't a General call, they don't

That other radio services don't require a knowledge of code has no
bearing upon us. Don't pretend you're a military or commercial radio
operator.

I am very confused about what equipment is needed to partcipate in packet radio networking, etc. I often come across pages that say you need an FM radio, is that just an everyday FM radio that sits in your HIFI ? or is it more complicated. What about antenae ? How big do they need to be ? do you need them at all if you are using an FM radio ???

Thanks

>constituted a reasonable way to categorize our conversations, based on a
>technological/scientific way of looking at the world and trying to
>understand it, but that version of Usenet died long ago.

Ah. Because we are now more diverse, you propose dispensing with
hierarchy to make Usenet *more* useful? To the contrary. The more
diverse we are, the more such hierarchy is necessary.

Recall that the original "geek" hierarchy was net.* with few
3rd-level groups. As it expanded, the hierarchy was expanded too,
to accomodate the needs of a more diverse audience.

>Usenet is now a collection of communities and cultures, and newsgroup names
>are a symbol of identity.

This is true. But does the identity come from the name, or from the
content? If people can feel attached to the names that we see today,
would not the latter explanation be more likely?

>If you were desperate to find some obscure bit of information, would your
>first thought really be to look over a list of thousands of newsgroups in
>the hope you might find something in those silly obscure dotted strings that
>form the Usenet naming conventions? I wouldn't, I'd just fire up my
>favorite web search engine instead.

YOu assume that the organization is for the users. To some extent,
it is. But it is also for another, very important reason: to allow
administrators to carry whole blocks of related groups. Throw in
comp.* and you don't have to worry about adding apple.*, ibm.*,
compaq.*, and brand-new-computers.*

>When you're planning your vacation, do you complain because you can't just
>look at a globe and figure out where you want to go based on the names of
>the countries? Of course not, you talk to your friends, you read some
>books, or you consult a travel agent.

Once upon a time we found our friends and businesses by directions,
e.g. "the sign of the boar, just past the water pump." Isn't 123
W. 23rd St. a better system? Do you object to that hierarchy?
Indeed, you might become attached even to such an address if it were
your own.

>Why do we look to libraries as the model by which Usenet should be
>organized? The assumption seems to be that such a hierarchical organization
>is "objective" and somehow provides information untainted by the perceptions
>and biases of the institutions doing the organizing. But it should be
>obvious to anyone following news.groups recently that the act of labeling
>cultures, placing them in relation to others in a strict hierarchy, is
>inherently a political act, with political consequences.

Of course it is. But nobody is seeking to be "objective". Objectivity
is the means, not the end. The idea is that objectivity allows us
to serve diverse interests with the most benefit and least conflict.
One key component of this objectivity that is not often mentioned
is the standard of using English names for things, despite an
international audience, e.g. soc.culture.brazil vs. *.brasil.

>The whole namespace purity argument is becoming obsolete. Newsgroup
>proponents should be allowed to name their groups whatever their
>constituents feel would best describe their identity. If there is then a

That's nice in principle. Doesn't always work. Many of the problems
we have are of the variety: "bar is part of foo, therefore rec.foo.bar
vs. bar is separate thus rec.bar". Since there is no practical or
fair way to exclude voters from voting against a group due to such
issues, the proponents do not have exclusive control over the
group's naming in any event.

>real need to aid users in figuring out what newsgroups would be interesting
>for them to visit, some enterprising business or industrious group of
>volunteers will undoubtably publish guides or develop search engines tuned
>to the current state of Usenet.

Such a proposal flies in the face of the intended flexibility and
compatibility of Usenet with all sorts of computers and software
around the globe. You are proposing a system wherein such guides
are not just commonplace and easily found (as they are today;
check your bookstore), but one where they are *necessary*.
This, I believe, is ill-advised.

>Is it really worth the constant flamewars and bitter contention that the
>current insistence on namespace purity enflames?

Some would call me a namespace purist; generally, I don't feel
bitterness over my choices. Those who do, should examine themselves.

To all radio amateurs

SB DX ARL ARLD025
ARLD025 DX news

This week's bulletin was made possible with info provided by Chod, VP2ML, the DX Bulletin, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

SPRATLY ISLANDS, 9M0. Jan, SM0OEK, in Malaysia signing 9M2JJ, is considering a DXpedition to Pulau Layang Layang, one of the Spratly group.

UGANDA, 5X. Due to security issues in northwest Uganda, Paul, 5X4F, left the country on April 25. He and XYL Peggy, 5X4G, will be stateside for about 4 months. They hope to return to Uganda this fall.

MALTA, 9H. Listen for DL2RUM as 9H3VP, DL7URH as 9H3VJO, DL7UTM as DL7UTM/9H3/VN, DL7IO as 9H3TY, and DL7IQ as 9H3TZ. 9H3 calls for DL7UEA and DL1YFF have yet to be issued. They plan be in the CQWW WPX CW contest May 26 and 27 from the Fanal Lighthouse on Gozo. QSL via DL7VRO.

SIERRA LEONE, 9L. Baldur, DJ6SI, is on the air as 9L/DJ6SI. Though usually operating CW, he has been heard on SSB.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, will be active from Penang Island, IOTA AS-015, for the CQWW WPX CW contest. QSL via the bureau to JA0DMV/JARL or direct.

MIDWAY ISLAND, KH4. Bill, NH6D, is going to Midway again, this time for at least a week. He leaves Hawaii late in the day May 16. Bill will be on all bands, CW, SSB and CW. Try 160 and 80 meters at around 5 PM Midway time. QSL via KL7H/6.

ALAND ISLANDS, OH0. DJ2PJ and DL5FF will sign OH0JWH and OH0JWL, respectively, June 7 to 14. This will be their second operation

from the Aland group. They will joined by OH0/DL1ZBO and OH0/DL4FAN. Plans are for all HF bands, 50 MHz, CW, RTTY, SSB and an entry in the ANARTS Contest. 6-meter operations will be on 50.210 MHz. QSL OH0JWH and OI0JWH via DJ2PJ. QSL OH0JWL and OI0JWL via DL5FF. QSL all others via home calls.

MACAO, XX9. Martin, AA1ON/G4DZC, will visit Macao in mid-May while returning from business in Thailand and will try to get on the air.

ROMANIA, YO. Jean, F6AJA, will sign YO/F6AJA during his free time from May 20 to 25. He will operate from station YO8FZ.

CAYMAN ISLANDS, ZF. Mike, W5ZPA, will be on the air as ZF2PA May 19 to 25 from Grand Caymen Island. QSL via W5ZPA.

JAMAICA, 6Y. Theo, PA3ERL, will sign PA3ERL/6Y5 June 13 to 29. QSL via PA3ERL.

THIS WEEKEND ON THE RADIO. Info on the ARRL VHF 50 MHz and EU CW Spring Sprints is on page 109 in April QST. Check page 100 in May QST for rules of the Baltic Contest and page 101 on how to participate in Armed Forces Day.

If this is a reply to my post, I don't see your point. I was talking
about the out of pocket difference between a self-employed person and
one who works for someone else. It had nothing to do with cost to the
employer.

There will be a Special Event Station operating from the Hamvention Flea Market. For those that will be attending the Hamvention, the station will be open during Flea Market hours. Stop by and say HI.

If you upgrade at the Hamvention testing session, this will give you a chance to try out your new privileges.

W8BI/8 will be operating in the General and Novice phone & CW protions. So if you can't make the Hamvention, be sure to look for the sation on air and say HI.

W8BI/8 will QSL Hams & SWLs 100%.

To QSL, send your business-sized stamped self-addressed envelope to W8BI/8, PO BOX 44, DAYTON OH 45401-0044, or you can QSL via the Bureau.

If you get to Hamvention and are running a portable packet station, look for my station on 145.6500, as N8QNP-1. Feel free to leave a message.

Jeff, do you remember which month it was run last year? Someone pointed this out to me earlier, but I lost the info.

I wonder what sort of call I would have received in "6" land when I moved here in 1975, as an Advanced Class licensee. When did the 2x2 callsign format start? I changed over to a "6" call when I renewed in 1988, but always wondered what sort of call I would have received if I made the change in 1975 or 1978.

Thanks in advance and 73 de Jim - KF6CR

>Is it really worth the constant flamewars and bitter contention that the
>current insistence on namespace purity enflames?

Hmm... I find myself both agreeing and disagreeing with you.

There seem to me to be four main functions of the name of a newsgroup
at present:

(1) As a search index, to help people find the material they want. As
you rightly observe, this is becoming less important as better
search methods evolve. (Though note that looking through a list of
newsgroup names is something that can be automated as well - I may
not look through the list by hand, but telling my editor to search
for instances of e.g. "chess" in it is a moment's work.

Nevertheless, better search mechanisms can be implemented by using more than just the newsgroup's name.)

(2) As a sort of invitation/warning sign to readers who are just browsing around newsgroups, giving them some sort of idea what is being discussed. This is different from (1) in that the readers concerned are indulging in undirected browsing rather than a directed search, and I don't believe your argument really applies to this situation.

(3) To categorise the type of traffic that is likely to appear in the group, for system administration purposes. (This is most obvious at the top levels in the hierarchies - e.g. "talk" indicating traffic that is liable to be flame-ridden, "comp", "sci" and "humanities" indicating various classes of traffic of potential professional interest, "binaries" indicating a hierarchy that is likely to carry non-human-readable traffic, etc.)

(4) As a label by which the newsgroup's readers identify themselves as a community.

Most serious naming disputes seem to me to be centred around reason (4) and its conflicts with the other reasons, or around some internal contradiction in the proposal (e.g. a group which, because it is unmoderated, has no reasonable chance of primarily containing the traffic its charter says it is supposed to).

So I end up agreeing with you that reason (1) is becoming less important as a newsgroup naming factor, but feel that there are other reasons to try to keep the namespace "pure". These other reasons are limited in their effects to things like:

* Providing enough context for the invitation/warning sign in reason (2) to be intelligible. For instance, rec.radio.amateur.boatanchors seems to me to have enough context; someone's suggestion that it should be just "rec.radio.boatanchors" does not.

* Not seriously impeding system administration. E.g. for an unmoderated "white power" group, more-or-less any name within talk.politics.* is going to categorise the nature and subject of the discussions well enough for 90%+ of existing systems' "sys" files to make the right decision about taking it without intervention from the sysadmin. Other top level hierarchies are much less likely to do so.

* The need for some groups to either be moved into a hierarchy which is more descriptive of what their traffic actually will be, or to be moderated to make certain that their traffic really is what it is supposed to be.

What can we do about all this? A major factor would seem to me to be to split the "self identification" name (reason (4)) off from the hierarchical name (which IMHO at its top levels should be determined

by system administration factors and at lower levels by "identification to browsing readers" factors). It would be nice if the newsgroup description line could be used for the "self identification" name, but I suspect this is a forlorn hope, given the nature of many existing newsgroup description lines...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 MAY AND FORECAST FOR 17 MAY - 19 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 15 May
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: 1.5E+06 (normal)
X-ray background: A1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 May 18 May 19 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled,
with on active period

Estimated Indices : A K Observed A Index 15 May
Learmonth 11 2322 2342
Fredericksburg 10 10
Planetary 9 8

Observed Kp for 15 May: 1131 3222

2B. MAGNETIC FORECAST
Date Ap Conditions
17 May 8 Quiet to unsettled
18 May 7 Quiet to unsettled
19 May 10 Unsettled
COMMENT: Unsettled to active conditions are expected 20-21 May
due to a coronal hole, visible on the suns northern solar hemisphere.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
16 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
17 May Normal Normal Fair
18 May Normal Normal Normal
19 May Normal Normal Fair
COMMENT: HF conditions are expeted to remain fair-good until
20 May. Degraded conditions expected at times for mid-high latitudes
for interval 20-21 May.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
16 May 10

Observed Australian Regional MUFs: near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
17 May 10 near predicted monthly values
18 May 10 near predicted monthly values
19 May 10 near predicted monthly values

comp.robotics.misc,comp.home.automation,sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,

First I want to thank *ALL* of you that replied either here on USENET
or via personal e-mail... And due to the positive responce I received
I've decided to continue the postings of L.O.S.A but I will only post
it if there is some new contributions since the last posting.

Also when the list grows to big I will post an pointer instead but I
don't consider the actual size (approx. 40 KB) to big so keep the
contributions coming ;-)...

Below is *SOME* of the replies I received via e-mail:

==========

From: Chris Hiner

Below is some of the replies I received via e-mail. Once again thanks
for your support ! I'm in favor of you continuing to post the list...
I'm not currently doing anything that would directly involve using a
STAMP, but it does give lots of interesting ideas....

It's rare I do hardware, but when I do, it's strange things like
monitoring lights on a phone to integrate avoice mail type application
onto a PBX that doesn't do such things...

Although, after seeing some of the things done in your list, maybe
next time I have a need for something like that, I'll use a STAMP :)

Thanks...

==========

From: Gary Coffman

I don't mind the periodic posting, but I usually just skip over
it because I've seen it before. If you'd prominently include
the last update date so I'd know when something new had been added,
it would be more useful.

Gary

==========

From: Garland@2bears.com

I encourage you to post the changes/additions to LOSA about once a month, and post a pointer to the full list (rather than the full list each time).

I don't object to your posting info on the STAMP, although, getting the same information again & again doesn't sit well. (And, frankly, LOSA is getting pretty long.)

Regards,

==========

From: Floyd Brown

I don't mind as long as you don't post the same hints, i rather enjoy them

==========

From: John Lundgren

I haven't read whatever the L.O.S.A. is, but if it is something that is a large document, then the appropriate procedure is to upload it to a FTP site and then advertise the site in the newsgroup. It's poor netiquette to make others suffer because of large posts.

==========

From: Mattias Waldau

It is a good idea to post it, it is interesting too see what people acutually build. I use a 28800 modem and have no problems loading down the news-groups I am interested of.

/mattias

==========

From: Fred Martin

The LOSA is great. Have a thick skin and keep posting.

Best,

==========

From: Greg Sturn

think the information is very worth while and I really apprecitate the STAMP info. Please keep it up!!!

==========

From: Matthew McDonald

I like reading the LOSA postings, and would be sorry to see them go. Please ignore the whiner.

==========

From: fbg@iinet.net.au

I thought it was really quite groovy, and was actually the sort of thing I would like to see more of on the group. For we folk who are toying around with the field, applications of generic parts are very enlightening.

Keep up the good work.

==========

From: Ron Majewski

Chris,

I enjoyed your posting about LOSA and look forward to seeing more in the future. Thank you.

==========

From: James P. Ryan

I missed you article. I was/am having severe news problems.
Would you be so kind as to email me a copy of the article?

Ignore the fool who wrote this note anonymously. It should be no concern of yours if he has to pay for news.

==========

From: Jeffrey Herman

What's this doing in the amateur radio groups? Why is it you folks feel you're exempt from a newsgroup's charter?

jh

==========

From: Mike Morris

Anybody who hides behind an anon remailer isn't worth listening to.

Keep it up.

==========

Once again, thanks for your support !

Best regards,

/Christer

There was a similar discussion recently on one of the rec.radio
newsgroups. The topic was whether binary files should be posted,
and the overwhelming consensus was that they should not. The
reason given was exactly what you are attempting to dismiss, that
is, the inconvenience and cost incurred by those who subscribe
to the group through a mailing list.

>But what is that characteristic about Morse code such that it is
>vital to know that mode of communications on the bands below 30 MHz,
>yet it is not necessary for operations above that frequency?

In the U.S., the Morse requirement was originally limited to 5 WPM
on VHF and above because A) it was hoped that this would encourage
those who couldn't otherwise cut the mustard to use their technical
skills to experiment and build equipment on the higher bands, B) less
competent operators on those frequencies wouldn't be an international
embarrassment, and C) access to VHF allowed additional time for
operators to study Morse and avoid the complete loss of privelages
when the non-renewable Novice license period (one year) expired.

The goal of all this was to attract talented individuals to the hobby,
but to reserve the jewel of Amateur Radio (HF radiotelephony) for
those who demonstrated the willingness to master the requisite skills.

ATTENTION SCANNER ENTHUSIASTS!

Are you tired of fumbling through scraps of paper trying to
keep track of all your scanner frequencies?

Have you ever been faced with the inevitable lithium battery
failure in your 1000 channel scanner, only to not be able to
find all the frequencies you once had entered?

Are you saying to yourself "There's gotta be a better way!".

Well, there is! Announcing the release of DAYSCAN! A totally new
concept in frequency database managers! Some of the key features
of Dayscan include:

- Designed with the scanner USER and PROFESSIONAL in mind
- No limit database
- Identifiers for each entry for channel and bank numbers so
that you can keep track of exactly whats in YOUR scanner!
Also, entries include city, state, county, and service
indentifiers! There's even a notes field for each entry
for you to denote special information about a particular
frequency!
- Dynamic user definable search and printing features! Search
or print your database by user channel, bank, frequency, etc.

These are just a few of the key features of Dayscan! Every
scanner enthusiast will surely benefit from this freqeuncy
management system! If you would like to check out Dayscan, simply
call the Dayscan support BBS, at 513-259-6114. Log in as follows:

First Name: DAYSCAN
Last Name : USER
Password : DAYSCAN

Thanks for your interest!

That's exactly his problem George, and I'm certain he will have something
to say about 'hams' (like you and me) who have problems with this proposed
naming.

Jeffery, you really need to -stop- insulting people just for opposing
your ideas, you also really need to learn the terms used in newgroup
discussions, and you really should stop insulting opponents (maybe saying
that twice more will get through)

>I think this is a tough sell.

Unless you live in the right neigborhood. I was amazed when I
came to Guam that everyone seemed to know what amateur radio was
and appreciate it's value in extreme weather conditions (we have
lots of typhoons here). I approached the manager of the 8 story
condo I was living in and asked about antennas on the roof,
expecting a very negative response. I was asked "Ham antennas ?"
and when I replied "Yes" I was given the key to the roof and
permission to put anything up I wanted. I doubt that is going to
happen too many places in the states, even with all the help that
hams offer after disasters.

These folks are taking things way too seriously, they are
reading things into the report that aren't there.

As for the Big issue being made out of the
system gain issue. Mathematically, OOK morse will win.

As I previously stated, a cw station with a 250Hz BW
has a 5.1dB greater system gain than does the PK232 with
it's 450 Hz BW. My support of that argument was then indeed correct.
Especially since the argument was limited to current modes
available.

So far, no one has demonstrated that this is not correct other
than to say it is incorrect.

Regards,

Bruce

> 73, Andy KC6NMD

It's too bad that a reasonable discussion wasn't brought forth on this.

I would have been more than happy to have embarked on one. However,
the first thing out of everybody's was generalized attacks.

So far, no one has mathematically proven the system gain
argument wrong, whereas I have already proven it as being correct.
Further, no one has actually cited anything on which to base a
discussion. It appears that the only interest here is
to insult and run people into the ground.

If someone wishes a logical discussion, they can email me.

Checkout SPRAT 72, it has schematics & etc for the Super Tee. Also the
latest QRPp has the SLT and another based upon a home brew rotary
inductor. Really.

In general either or both of these are great places for finding QRP stuff.

>General. The FCC rule book was crystal clear on this.

I took my Advanced in 1969 or thereabouts. At the FCC. There were no schematics to draw, not one. The test was so easy that I learned the material the morning of the exam. Having looked at today's Advanced test (widely believed to be tougher than any of the others, including, IMO, the Extra) I would say that it is tougher than the one I took.

Advanced callsigns were 1X3s because that is all the FCC issued to the 48 contiguous states, unless you were an Extra. When the 2X2s were available, lots of us changed our callsigns. I became KD6IX, from my earlier WA6XXX call.

20 years ago, all the 1X3s were used up. When I got my WA6 call in 1966,
I'm pretty sure most or all of the call districts were already not issuing
1X3s. I know that was true for the 6 call district. In the 6 district as of
1966, all the WB6 calls had been issued, and they were cycling back through
the WA6 calls, for whatever reason.

Well stated, Jack! There are advantages to CW that have yet to be buried by the newer modes - and likely never will be! I am an avid packet user and see many advantages to the ever growing body of digital technology. However, CW has and, in my opinion, will long retain, an important place in amateur radio communication.

Weigh this by the fact that I am yet among the no-code Techs who have yet to master CW. The fact that I do not have access to the HF bands does not in any way diminish the ongoing worth of an "outdated" mode. Instead of bemoa
ning the fact that CW is still Greek to me and demanding my "rights", I'll choose to keep plugging away at the mysterious code untill I can finally whip it! I do not doubt that CW will still be alive and well when I'm an SK! But I plan to be able to pound out QRT on my casket lid while they cart me away!

Think of it as a FCC-hunting license. FCC says you can't hunt until
opening day.

Besides, this avoids the problem of preferential treatment to those who
mailed too soon (to arrive before opening day) so that they could be the
crowd.

> makes YOU qualified to draw such conclusions? That was all the
> response I got.

Bruce, the term "self-selected" does not mean that you ignored some fraction of the replies. It means that the respondents were people who chose to respond, not a random sample or a constructed representative sample of the ham population. This means that the sample is likely to be drawn, disproportionately, from the tails of the bell curve -- that is, from the small fraction of hams with strong opinions on one side of the issue or the other, in addition to the bias introduced by the means by which the survey was administered. "Bias" in the technical sense of the term, not meant to suggest any deliberate slanting of the results.

You did qualify your report of your results. Anyone who flames you for the conclusions, ignoring your own qualification of their value, just proves that most people won't read.

There is no characteristic, just international law which requires it.

Vince,

For most circumstances, it isn't necessary. I'm afraid that
typical VHF work these days is either FM voice or packet.

In those special cases, such as the one you have
mentioned as well as EME work, it is very important.

Scott:
In Gwinnett County Georgia (Northeast County boarding Atlanta) we would be honored to have you hang out on 147.075 +, PL 82.5. We have two voting rx sites plus the main repeater receiver. In order to take advantage of the voting rx sites you need the PL. You can hit the main site without a PL. BTW the main site in located in Lawrenceville, GA.

> KF4DDM

To use your analogy, it doesn't matter whether you are going to drive
a 1975 Ford Pickup, 1995 Dodge Viper, or a 1977 Olds Cutlass,...you
must pass a test and be proficient in any of them. Doesn't matter
that one uses points and carb and the other EFI and CPU control, you
must still pass the same drivers test. The bottom line is that the
ITU mandates the CW requirement. Even if the ITU were to change the
rule, that doesn't mean that the FCC will!

Opinions expressed herein are my own and may not represent those of my employer.

writes...
>In response to Tom Randolph:
>You miss the point entirely. The issue of Morse Code has absolutely
>nothing to do with its usefulness as a mode. And hasn't since at least
>1980.The issue is deregulation, an easing of requirements, both code and
>theory.

Nope. The issue is: What is Government's legitimate purpose in testing us for
Morse Code proficiency? No legitimate purpose, no tests. Gary is fond of
calling it "hazing". It used to be for emergency comms, but that purpose is
all but gone now. I fully agree that easing of requirements is a problem. The
legitimate purpose is knowledge of safe operation and RFI avoidance. The
current tests, which publish all the answers in advance, aren't tests at all.
Substituing CW tests for tests of genuine technical knowledge, in some sort of
effort to "keep out the riff-raff", not only gives Gary something to sink his
teeth into, but will be counter-productive in the long run. We'll become a
service of mush minds who can pound brass.

>In addition, simply because the Morse Code is being abandoned by
>the military is no reason for Amateurs to abandon it. That's because
>Morse Code serves in a far greater role for the Amateur Service.
>THAT'S the issue.

I never said we should abandon it. I agree that it serves an important purpose
in the amateur community. It's a very basic communications mode, well suited
for experimentation and use with inexpensive equipment, with about 1 to 2
S-unit's advantage over voice modes. This is siginificant for us, where it is
not for public service/military/industrial users, as part of our charter is
technical development. Even if we eliminate Morse Code tests, amateurs will do
themselves a disservice if they abandon the mode entirely.

>active) and a "boatanchor" amateur radio.

what confusion? i'm a boater, not a ham, and i wouldn't look
for advice on boating electronics in a group called rec.radio.
amateur.boatanchors. i'd look in rec.boats. there is some
crossover when you get into bluewater cruising and SSB equip-
ment, but i am sure i would still not look in r.r.a.boatanchors
for that.

by the way, i am familiar with the term "boatanchor" for old
computer equipment -- i'd suspect that r.r.a.b would be for
old ham equipment. the descriptive line could say "for talk
about vacuum tube radio equipment", and that would be fine for
my purposes. if i want to know more, i can read the FAQ, and
from the sounds of it, an explanation is available there.

>I think that you have to recognize that **most** of the Usenet world is
>what you are terming "outsiders." Your position is like that of someone
>who insists on "misc.haircuts.whiffle" because that is a term used in a
>relatively small region, without realizing that Usenet includes 50
>states in the US, all of the Canadian provinces, Great Britain,
>Australia, and New Zealand just in the English-speaking realm, and that
>one of the side benefits of having a well-named newsgroup is that it
>will attract people from countries where English is very much a second
>language, with posters working from translating dictionaries.

you don't really want me to go thru the active file and pick
out all the groups that have names which i, as a non-native
speaker of english, don't understand, do you? the dominance
of english is acceptable to me, but not to the point where
a population of 700,000 people is refused a term they use
as a matter of fact because somebody in southeastern turkes-
tan might not have an up-to-date dictionary.

somebody else asked what i would think rec.collecting.stamps.
cinderellas would be for -- simple: stamps. *snicker*. if
i was interested further (and i'd hope the descriptive line
would tell me whether this had anything to do with disney,
grin), i would acquire the FAQ and find out.

i am all in favour of keeping the top 3 hierarchies clean
and easily understandable, but i don't get all bent out of
shape if i don't upon first sight understand a fourth level
name -- it does happen at times, and you'll admit that
my grasp of english isn't too bad. things get rather spe-
cialized at that level, and even a good grasp of english
isn't necessarily enough to understand the specialization.
i don't see that as a problem.

i agree that namespace issues are important, but i wonder
whether in this case there isn't a bit of overreaction --
the name of a group itself is never, ever enough to convey
the true spirit of the group anyway, and i consistly advise
newbies to not rely on _their_ interpretation of a name,
but to read the FAQ, read the group, and see what the at-
mosphere is like. (by the way, soc.singles is neither a
meat market, a personal ad repository, nor does it discuss
modern methods of cheese packaging. there. i needed to
get that off my chest, thank you.)

>Much as I disagree with David Lawrence and his "group advice" operation
>a lot of the time, in this case we're dealing with a very real conflict
>with a newsgroup proposal addressing electronics used on boats. You can
>pretty well count on a whole group of "no" votes from outsiders on the
>namespace issue, and I don't think you can count on enough "insider"
>votes to carry the proposal through a vote.

well, i wouldn't vote 'no' on it. usually i don't vote on
groups i am not planning to read at all, but i really do
not like the tone of this, which crops up now and then --
this isn't a political issue, the name isn't offensive to
anyone, a large population around the world understands
the name, and i wish people wouldn't be so ornery. it's
sad advice; i'd prefer to see advice that tells the ham
folks how to present their case better.

so here's some of that: show us that there is traffic
justifying the new group, show us that there really are
hundreds of thousands of people out there who understand
the name (i suspect that is true merely based on my own
feeble understanding of the term). most people in news.
groups seem to me eminently reasonable, albeit a bit
frayed around the nerves from a lot of recent bullshit.
let's see a proper RFD, and we can go from there.

: -Drew in Sunny Central Florida-
: KF4DDM

-- Your spin on my analogy completely misses my point, and you know that.
My point is that OLD technology is not worthless or useless because
it is merely less complicated and requires a little more human effort
to employ, in some cases. The RELIABILITY factor outweighs the need
for the user to do a little work.

As far as the mandatory aspect of CW for HF access, that is another
matter. Truthfully, CW is probably not an absolute prerequisite for
proficient and responsible operation on HF. But, if not CW, then what?
North American amateur exams have been "dumbed down" over the years,
to permit VHF amateurs to play with their factory-proven gear where
the frequencies automatically prevent world-wide interference.

If these "instant amateurs" can flood into HF, without real effort,
chaos would reign. The CW barrier helps ensure that only individuals who

have the determination, patience, and committment to achieve will enter the HF bands. Because their priveleges are hard-won, they will most likely be by those who WILL behave responsibly, and operate proficiently. In that regard, the CW requirement is a highly useful screening device.

If CW is removed as the HF admission ticket, then a more difficult set of radio proficiency exams should be instituted to ensure that you still must demonstrate determination, patience, and committment to acquire HF priveleges. This would certainly only serve to increase responsible and proficient HF operation.

shane

The cw op might also have copied:

th_q u_ckb rownf o_ju mp_do v_rth_l _zyd og.

There's gonna be some dead air after that one, unless the sending op also sends a BK after every word. Throw a few dropped dits and dahs in there, and you can figure in some incorrect letters to boot. You perhaps over estimate the "robustivity" ;-) of CW relative to the error checking digital modes.

It's probably more fun to operate CW, sort of like building your own TV set from a kit. But, just as it's more efficient to go out and buy a Sony, there are certainly more efficient ways of communicating than CW.

Taking a poll without bias is half the battle. Insuring that the data is analyzed and presented without bias is the other half.

: A canoe is less costly, so your recreational dollar goes further.
:
: CW is the bicycle, canoe, sailboat, motorcycle, and old reliable
: pickup truck of amateur radio communication. Old-fashioned?
: Maybe... but, for specific purposes, indispensable.

All this is true but irrelevant. What we're talking about is your right as an American to use whatever means of transportation you find most convenient. As opposed to being required to pilot a canoe successfully to get your driver's license.

BTW I think comparing a 75 Ford to a modern one is a bit too close. The difference between CW and other modes is more like the difference between a pogo stick and all the other kinds of transportation.

While we're on this, I resent being put in the "dumbed down" category for not learning code. There are many of you that are dumber than I; merely witness your bigotry. It speaks for itself. I expect this sort of bickering will never end until 1.) the FCC finally comes to its senses and 2.) all of those of you who both remember these times and are too set in your ways to change DIE OFF.

I agree, CW is a filter for smart people. Kindof. But it's too narrow in that there are people (like me) who could eventually pass any kind of written exam the FCC could muster up, who resist CW due to its irrelevancy in their daily lives and the fact that the investment is too great to get such a small return out of it. The written exam is a much better "smart filter", if we

really need one at all. If ham radio is all about experimenting and finding new and better ways to carry out effective communications on the cheap, then the filter should particularly embrace people who exhibit ingenuity rather than mere "smartness". CW doesn't facilitate that at all.

And regardless what the FCC does (short of outlawing CW outright, which for those of you who haven't figured it out yet, is _not_what_we're_talking_about_) CW will never die. That's OK by me, but leave it for the historians, those who insist on getting through when nothing else will, and those who are interested.

Watch closely. At no time do my hands leave my arms.

Newsgroup names form an index. They function like the catalog in a library, serving two functions: getting people interested in a topic to posts about it and getting people _not_ interested to someplace they're more interested in.

As such, it's important than newsgroup names be descriptive. Do you think that librarians should let people use cute witticisms as subject headings (as opposed to the titles of individual books)? If they did, soon everyone would be bringing their own sense of humor, and the informational function of the index would rapidly degrade.

Sysadmins are quite rightly concerned with what is usually called "namespace". Each name sets a precedent, implying that reasons X, Y, and Z are good reasons to name a group. What is done once will almost certainly be done again.

So this case is one where you know what's going on. Fine. But yourself in the position of a newcomer to the field wondering where to start - or picture yourself needing to get information and views on a subject unfamiliar to you. Do you want the last element of the name to be humorous or informative? (The obvious answer is, of course, "both". But in practice it's hard to increase both simultaneously.)

Further, picture yourself needing to get information from a hierarchy in a foreign language you speak, but which isn't your first tongue. Do you want the namespace elements to be highly idiomatic, or as clear as the creators can make them? The net, remember, is a global phenomenon, and a non-trivial fraction of readers are in precisely that situation when it comes to English. To what extent should they be handicapped for not knowing English slang, as opposed to actually knowing the subject to be discussed?

You may not have to deal with any of these points. But sysadmins do. They are the "librarians" of Usenet, and as such have a proper concern with every newsgroup's name and placement.

>is important to the potential readers. It describes perfectly what we
>want to talk about - boatanchors is a term used all over the world for
>this kind of equipment.

Others have cited examples of the usage in English running back some
time now. So far nobody has cited its usage in any other language.
Such citations would be welcome.

Please provide your calculations as I can't reproduce your numbers.
Especially explain your use of the phrase "all else being equal". Are
you referring to identical data rates and if so what rate, identical channel
characteristics and if so what sort of channel, etc. What mode with the
PK-232 are you analyzing and in particular what data rate since none
of the standard digital data rates are nearly as slow as the 20 WPM you
mentioned for Morse Code. 20 WPM equates to a bit rate of around 15 bps
which is better than an order of magnitude less than the slowest rate
offered on a PK-232. I' m not saying that the PK-232 is necessarily better
than Morse, I'd just like to see your calculations. Also the PK-232 isn't the
be all, end all of digital transmission systems, but I'm sure you know that.

> And system gain is only one small measure of a system, but this was the argument
> presented and this is what I stuck with. Further, to optimize the bandwidth,
> we could get down to 100Hz - and still be able to copy 20wpm,

> Remember, the argument also stated "mode available."

Again, please provide the numbers. I can't see how you've managed
a nearly 8 dB gain for a 2.5 factor in bandwidth reduction. Why isn't
the additional gain roughly 4 dB?

CABOT 500 SPECIAL CALLSIGNS TO BE ISSUED

In commemoration of the 500th anniversary of John Cabot's voyage to North America, the Society of Newfoundland Radio Amateurs will be operating the station VO500JC from the Cabot Tower in St. John's, NF from Jan 1, 1997 until Dec 31, 1997. This station site is located at the VO1AA site where Guglielmo Marconi received the first trans-Atlantic wireless signal in 1901.

We are now in the planning stages for various special events throughout the year but we hope to have the station operational as much as possible in order to allow everyone an opportunity to make contact with us. We also encourage any Amateur travelling to Newfoundland for business, a holiday or the Cabot celebration to visit our station and make a few contacts from this historic site.

Two other station callsigns have been granted for the 1997 celebration; CY1JCD at Bonavista, the site of Cabot's landfall, to be operated as a joint venture between ARCON and QSARC, and CY2JCD at a yet to be released site in Labrador, operated jointly by HOWL and GBARS.

As events are added to the operation schedule, future notices will be issued.

73 and CU on the bands.

Excuse me, but I seem to recall the heading claiming this was a
scientific study (although now it is labeled controversial.) You also
draw conclusions "The data collected here showed some definite trends."
which is impossible based upon the sample size. That would be like
me claiming the average age of US citizens is 19.8 years as that is
the average age in my household.

> The survey itself also pointed out that this was
> NOT a funded research project, but a class project.

That doesn't excuse trying to draw conclusions that can't be
drawn. In fact, I might excuse a funded research project as
they tend to have pressure on them to find something that
isn't there. In a class project, no such pressure is present and
the author has the ability to be completely candid in their
assessment of the situation without regard for repercussions.

> Yes, 1.2 million is correct, a return envelope is necessary.
>

> So, who is going to put their money where their mouth is???

Learn a little about statistical analysis and you'd discover that you
could do this sort of study at very little cost. You don't need any
where near a complete sample of the population to draw statistically
valid conclusions. In fact, it's generally impossible to get a 100%
sample of any large population with a survey as you have no means
of ensuring participation. Nonetheless, your rather grossly over
exagerated numbers above demonstrate your ignorance of
statistical analysis.

It's almost funny as you hedge a little by stating "One of the problems
with this study will be total accuracy. The number of questionnaires
returned totaled 54, this represents less than 0.01% of the total amateur
population in the United States. " Then you later draw the following
conclusion "As a whole, those in favor of keeping Morse Code as a testing
requirement have two things going for them. First, the fact that they
are clearly in the majority. " Statistically the exact opposite is equally
likely based upon your sample, i.e., there is essentially zero confidence
that the sample represents the population.

> I had one semester to do this whole thing and little resources.
> Therefore, I used the resources I had. Internet and packet access as well as my
> local clubs. For whatever reason, I did fail to mention that.

That excuses drawing conclusions that can't be drawn? Why not
present the data, explain the realities of statistics, and let it
go at that? Certainly that would be better than essentially lying.

> As for those who think these were 54 self-selected replies?? Self-selected?
> How the hell do you draw that conclusion? What makes YOU qualified to draw
> such conclusions? That was all the response I got.

They are self selected by definition. They chose to reply to something
they saw instead of being selected by the party performing the survey.
As a result, you have no idea what the return rate was, i.e., how many
people responded versus how many didn't respond. That alone makes
it difficult to draw any conclusions. Most surveys are done by selecting
a random sample of the population under study and getting their answers.
If the return rate is sufficiently low, then additional survey or study is
generally performed.

> This is a really sad statement about the hobby in and of itself.

What? That you flung a survey out onto some electronic networks
and only got 54 back? What conclusion are you going to try and
draw from that?

> As for methodology, I followed standard practices the best I could within
> the restraints given.

So far I haven't seen any standard practice, nor any restraints
that would have made a valid study impossible.

> BTW - I made no claims that this was a definative survey, certainly not a
> statistical survey. This was strictly a survey of observation, sociology,
> specifically, anthropology.

Then don't try to draw conclusions from your data that can't
be substantiated by that data. Whether this is a sociological, anthropological,
or any other area of scientific study makes no difference on the
scientific method. That's what makes them sciences instead of art.

> It was much smaller than I would have liked and obviously you are
> seeking something more, sorry folks. I took advantage of a situation presented to
> me.

The only advantage I can see you took was of your readers.

> As it is, a friend donated space on his homepage so I could fullfill the promise
> to those participants who asked to see the results. I did not choose the link wording
> on his page. If that is what has you so damned worked up; At my request,
> he is changing it - there, your spleen feel better now?

Ahh, that explains the change from scientific to controversial. That still
doesn't change the content and the attempt to draw conclusions that
can't be supported by the data collected.

> At least I DID something, you can't as yet say that. Was it perfect, hell no,
> I know that. But the results are what they are, whether you agree with them or not.
> But don't ever think you'll get away with unfounded statements such as my
> being ignorant.

You have yet to disprove your last sentence when it comes to statistics
and drawing conclusions based upon data that can't support those conclusions.
Had the study simply said here is what you found and pointed out that it is
impossible to draw conclusions based upon the data and had left out an
apparent bias on the part of the author, the paper would at least not mislead
the reader.

> Newsgroup names form an index. Do you think librarians should shelve
> books according to the whim and in-jokes of those who know a subject,
> or according to a relatively objective system that's helpful to both
> those who know and those who don't?

This seems to be a very popular slogan in news.groups, and one that I think is becoming outdated. Usenet is not a library, and it's becoming a joke to say that the newsgroup names are actually useful as an index. Perhaps such a notion of Usenet was useful in the good old days when we were just a bunch of computer geeks with a common culture and some shared idea of what constituted a reasonable way to categorize our conversations, based on a technological/scientific way of looking at the world and trying to understand it, but that version of Usenet died long ago.

Usenet is now a collection of communities and cultures, and newsgroup names are a symbol of identity. By your argument, the names of all the towns in the USA should be given hierarchical descriptive names in alphabetical order arranged from north to south and east to west so that visitors will have some idea what to expect when they visit them. And if some small town is given the name podunk.nowhere.midwest.usa by the Federal Naming Committee then of course the residents might be offended.

If you were desperate to find some obscure bit of information, would your first thought really be to look over a list of thousands of newsgroups in the hope you might find something in those silly obscure dotted strings that form the Usenet naming conventions? I wouldn't, I'd just fire up my favorite web search engine instead.

When you're planning your vacation, do you complain because you can't just look at a globe and figure out where you want to go based on the names of the countries? Of course not, you talk to your friends, you read some books, or you consult a travel agent.

Why do we look to libraries as the model by which Usenet should be organized? The assumption seems to be that such a hierarchical organization is "objective" and somehow provides information untainted by the perceptions and biases of the institutions doing the organizing. But it should be obvious to anyone following news.groups recently that the act of labeling cultures, placing them in relation to others in a strict hierarchy, is inherently a political act, with political consequences.

The whole namespace purity argument is becoming obsolete. Newsgroup proponents should be allowed to name their groups whatever their constituents feel would best describe their identity. If there is then a real need to aid users in figuring out what newsgroups would be interesting for them to visit, some enterprising business or industrious group of volunteers will undoubtably publish guides or develop search engines tuned to the current state of Usenet.

Is it really worth the constant flamewars and bitter contention that the current insistence on namespace purity enflames?

What kind of antenna are you planning to use it with? This may
determine the type of tuner that you need.

73,
Jack WB3U

Now that you've got the code under your belt you can build some simple gear and get on the air with it. You'll learn plenty of RF theory and practice that way, and I'll bet you even have fun.

>
> And that is as it should be.

You can't really compare in such a way. The difference between the 1975 Pickup and the 1996 Viper, is like the difference between an old Drake analog HF rig and an ICOM 781. An appropriate comparison would be to compare planes, trains and automobiles. The key word here is MODE. Mode of transmission. Mode of transportation.

When I was in High School, I had to take History, geography etc. I had to take those courses in order to get my High School certificate. At the time I wondered why, I had no intention to go into such fields and no interest in those subjects. Now I find some of what I learned in those classes quite useful. The same goes for CW. Those who learn it may never intend to use it, but learn it anyhow to get their HF license. Later they realize that it is quite useful.

You've got to be kidding!

It took me a year, not two weeks, to learn code well enough to get
my general. I could have learned an AWFUL LOT about RF theory in
the time I wasted learning how to be proficient at CW.

I've only met one individual who was able to get his general in two
weeks. All others were months or years. In one case I know of an
old fart who has tried to pass his general for 15 years and still
has not passed.

>the WWW? Any help is appreciated.
>
I think there was such a program in PC Magazine. Would it be on ftp.ziff.com or ftp.coast.net/SimTel or ftp.simtel.net/pub/simtelnet? (There was a recent split in the well-known SimTel chain of shareware archives and ftp.coast.net and ftp.simtel.net have similar but not identical collections.)

There is a kind of program called a "tardis" program which automatically adjusts your computer clock by contacting a time server through the 'net. That should be available through www.tucows.net or www.cswapps.com.

(I'm assuming here you want something which will run under Windows; I'm not familiar with stuff for Mac and other platforms.)

==========

The FCC decides to release details of a VE investigation while a Louisiana ham surrenders his ticket for life. These stories and more on Newsline report number 979 coming your way right now.

(*****
FCC GIVES OUT INVESTIGATION INFORMATION

Has the Federal Communications Commission placed the security of the all volunteer testing program in jeopardy? This may well be the case if a

story in the May 1st edition of the W5YI Report ham newsletter is true. According to W5YI, the FCC has released certain documents surrounding an investigation of an examination session held in Quapaw, Oklahoma in March of 1994. An investigation held to determine whether applicants examined at that session had prior access to the contents of their Amateur Radio operator license exams prior to the start of the test.

W5YI says that two volunteer examiners were temporarily suspended by the ARRL VEC. Then, based on information that the League supplied, the FCC required that several examines be retested. All refused to take new tests and the FCC informed them that their newly obtained licenses would be canceled or downgraded to whatever level they held prior to the exam session. The two volunteer examiners along with two applicants countered by seeking release of the investigation documents under the Freedom of Information Act.

On learning of the request, the ARRL filed a motion to deny. The League said that it was very concerned that releasing the documents would not only interfere with the investigation, but would also reveal some of the investigatory techniques used by the ARRL to assure that ham radio testing security was not compromised. The ARRL noted that releasing any of this material would not only compromise the content of tests currently in use, but would also disclose the identities of persons not under investigation. This says the League, would invade their privacy while revealing potential informers and confidential sources.

But the Washington bureaucracy moves in very strange ways. When the investigation was completed, the FCC said that it would release the documents with certain information deleted. This, even if it means a breach the impunity of the ham radio testing program. It did however refuse to make public certain Morse code testing materials but also refused to return to the ARRL the original documents that lead to the investigation. The agency says that under federal law it cannot return any materials that might be subject to a Freedom of Information Act request.

This is not the first time that the bureaucrats at the FCC have jeopardized the security of the All Volunteer Amateur Radio Testing System. Regular listeners may remember about a year and a half ago when the name of an informant was handed out by an FCC lawyer to a volunteer examiner under scrutiny in another investigation. That person later received threats for being a good citizen and telling the FCC.

(*****

FAMILY RADIO SERVICE CREATED

The FCC acted on May 10th to create a new personal Family Radio Service. This service was established in direct response to a petition filed by the Radio Shack Division of Tandy Corporation. Radio hack had requested that the Commission establish such a new radio service to be aimed at providing the American public an affordable and convenient means of direct, short range two-way voice communications among small groups of people.

The new Family Radio Service is described by the FCC as a short distance with a presumed range of up to a half mile. Its purpose is to provide families, friends and / or associates participating in group outings a way to communicate with members of the group who are out of speaking range or

but still in the same general area. For example, the Family Radio Service could be used by hunters, campers, hikers, bicyclists and other outdoor activity enthusiasts to keep in contact with one another. It could also be used by parents to keep in touch with children playing in the neighborhood or families or friends to keep in contact with one another while at shopping malls, sporting events, or amusements parks.
The new FCC rules authorize a user to operate an FCC certified Family Radio Service transmitter without a license in places where it regulates communications. FCC certified units may be identified by the label placed on it by the manufacturers. The radios transmit on any of the fourteen channels in the 462 to 468 MHZ range allocated to the Family Radio Service.
If the Family Radio Service sounds like another attempt at creating a new version of the old 11 meter class D citizens radio service you are right. The big difference is that only super low power radio equipment will be available to service users and the frequency range selected is considered to be line of sight. So there is little chance of there being Family Radio Service users trying to shoot skip in the 460 MHZ band.
One final note. The FCC decision to create the Family Radio Service will have definite impact in the world of business and finance. Not the least of these is that its ability to get the Family Radio Service created puts Tandy Radio Shack in the position of a two-way telecommunications giant along with companies such as Motorola and GE.
More on the creation of the new Family Radio Service and the impact it may have on the growth of Amateur Radio in a future Newsline report.

(*****
FORET CASE CLOSED

Irvin J. Foret, KB5UJD, will be giving up hobby radio for life. Foret is the Metairie, Louisiana, Technician Plus ham whose license was suspended for two years by the FCC. This, following allegations of interference to Amateur Radio operations in the New Orleans area.
After several weeks of bargaining it appears as if Foret has reached a settlement with the FCC to end the enforcement proceedings against him. The key point of the deal is that Foret has agreed to immediately surrender his Amateur Radio license for life and permanently divest himself of all electronic equipment capable of transmitting on the ham bands. In addition, Foret has agreed not to apply for any FCC license or permit, regardless of the service. He has also agreed to abstain from participating as a third party in any communication in the Amateur Radio service and even from transmitting on CB and will also pay a $500 forfeiture to the FCC.
But the core of the agreement was his new found willingness to cooperate fully with all government officials in connection with any ongoing or future administrative or law enforcement investigations or proceedings involving ham radio operations by others. In simpler terms, Foret will become a witness for the government in any proceedings that it may undertake against other hams who may have been involved in the same or other rules violations of which Foret may have knowledge.
The Commissions original action against Foret came on April 5th. This, after Commission personnel monitored and documented Foret's transmissions

in December 1995 and January 1996. The FCC said some of Foret's transmissions on January 29, 1996, constituted willful or malicious interference to the transmissions of other Amateur Radio stations, in apparent violation of FCC rules. During an inspection of his station, the FCC said, Foret had been lacking in candor and misrepresented material facts to Commission personnel by stating that he did not make the transmissions the Commission observed. The FCC also said some of Foret's transmissions were unidentified, included music or were obscene or indecent, the alleged indecent transmissions occurring at a time when there was a reasonable risk that children were in the audience. The latter being a direct violation of the so-called "safe harbor rule."
The agreement between Foret and the FCC does not prohibit him from engaging in otherwise lawful transmissions over land mobile radio facilities as part of his work. But as far as any other form of radio communications is concerned, Irvin J. Foret, soon to be the ex KC5UJD, is now banned for life. It is also one of the harshest regulatory enforcement actions taken against a radio amateur in the past two decades, and hams nationwide are wondering who will be next.

(*****
TEETSONS REMEMBERED

A friend of the murdered Floyd Teetson, W5MUG, and is wife, Winnie, WN5YTR says that he cannot comprehend why the alleged assailant killed the only two people who cared about him. Troy Ballard, W5AU, is among those having a hard time understanding why 18 year old Kevin Coleman, whom he described as a high-school dropout, committed the crime. "They really had tried hard to help this young man," says Ballard.
"They both had stressed the importance of Coleman getting an education, and even offered to pay a tutor to help him get his general educational development diploma. They were probably the only true friends this person had."
Ballard and two other hams went ahead with plans laid mostly by the Teetsons, to operate during the ARRL International DX Contest from Little Cayman Island. The group used Floyd Teetson's Caymans' call sign of ZF2FT in honor of their slain friends.
Coleman who has confessed to killing the Teetsons faces the death penalty if convicted of the crime.

(*****
DAYTON IS ON

The 1996 Dayton Hamvention is on. Three weeks later than in years past, Hamvention '96 opened at noon on Friday May 17th to a record crowd. Ken Allen, KB8KE is the General Chairman of Hamvention '96. He says that with the date change, he had one big worry:

"For years now, Hamvention has been that last weekend in April. So it has been on peoples agenda. It has become habit to a lot of people. Has just become part of their yearly routine. So part of it is a fear that we have had in the back of our minds, that come the third weekend in April there's going to be this crowd of people show up at Hara Arena asking where

Hamvention is." KB8KE

Well nobody we know of showed up at the Hara Arena on the wrong weekend. This is primarily because the Hamvention planners went to great lengths to publicize the new date. Again Ken Allen, KB8KE:

"We have advertised it rather heavily, that we have changed the dates. Last year, I'm sure you may note that we were passing out extra flyers every time somebody walked by a ticket booth or a ticket sales place or just about anywhere in the arena. We were handing out these little notices reminding people of the date change." KB8KE

As we go to air, Newsline reporters are circulating throughout Hamvention '96 with tape recorders in hand. We will have a full wrap up next week.

DISASTER PREPAREDNESS WORKSHOP SET

A workshop titled Disaster Preparedness: Reducing Risk and Improving Response, is scheduled for June 24 in Asheville, North Carolina. It's sponsored by the Disaster Emergency Response Association which is an ARRL-affiliated organization.
All Amateur Radio operators and others involved with disaster planning and emergency response are welcome. Robert R. Dockery, WD4CNZ, a professor at Western Piedmont College, will chair the workshop, which plans to cover risk assessment, mass casualties, terrorism, hazard mitigation, incident command, communications and recovery.
The workshop will be held in Simpson Auditorium at Asheville-Buncombe Technical Community College. The first session runs from 9 AM until 5 PM; the second from 6 until 9 PM. Participants may attend either or both sessions. The registration fee for Amateur Radio operators active in any form of voluntary emergency service is only $12.50 if they register before June 1st. To register or for more information, write the:

D.E.R.A.
Readiness Workshop
P.O.Box 6558
Asheville, NC 28816

(*****
LEARN YOUR NOI'S

The FCC will host an open forum on May 31st on the proper way to participate in the rule making process. The three hour session starts at 9AM in Washinton, D.C. For more information contact: Martha Contee at (202) 418-0260.

(*****
NEW HUDSON VICE DIRECTOR APPOINTED

Dr. Richard A. Sandell, WK6R, of Scarsdale, New York, has been appointed Vice Director of the ARRL Hudson Division. He will fill out the unexpired

term of Paul Vadarny, WB2VUK, who ascended to Division Director upon the election of Stephen Mendelsohn, WA2DHF, as the League's First Vice President earlier this year.

(*****
COLLOQUIUM '96

The 11th AMSAT-UK Colloquium will be held at Surrey University, Guildford, Surrey, U.K., from Thursday 25th to Sunday 28th July 1996. Current intentions are to devote the Thursday to international and IARU matters and to structure other subjects across the following three days. Amsat-UK invites authors to submit papers, about amateur radio space and associated activities, for this event. Abstracts of Papers for presentation should be submitted as soon as possible. Submissions should be sent to:

Chris Jackson
G7UPN via Internet

to

G7UPN@amsat.org.

(*****
DOVE DOWN

The DOVE-OSCAR 17 satellite remains down following problems first experienced last December when an onboard computer apparently crashed. Jim White, WD0E, of AMSAT reports that ground controllers have ruled out a few hardware problems, but have come no closer to identifying the actual cause of the satellite's onboard computer problems. The satellite is transmitting occasional packets on 145.825 MHZ but not transmitting on S band.

(*****
ARIANE

Western Europe's first new-generation Ariane-5 rocket was transferred to a launch pad in French Guiana for tests that will fix a launch date. The 100 foot high launcher with two solid propellant strap-on boosters is the type that will be used to launch the Phase 3D ham satellite into orbit.

(*****
PUPILS PLAN MOCK SHUTTLE MISSION

To help generate awareness of their scheduled SAREX contact during the STS-78 shuttle flight in June, pupils at Heritage Middle School in Colleyville, Texas, launched a shuttle mission of their own. A mission complete with SAREX.
Seven pupils in a sixth-grade math class served as astronauts during the day long mock-up. More than 200 students participated on different support teams.
One of the student astronauts, Vivian Wang, KC5NAU, operated onboard equipment for 2 meter FM, 70 centimeter amateur television and packet. Other radios were in the schools own mission control and in other

classrooms. The youngsters performed experiments and space activities and even have to dealt with a few "problems" during the mission.
The real STS-78 is scheduled to launch June 20 at 14:49 UTC. It will carry space shuttle Columbia into orbit for a 16 day microgravity mission. SAREX communications will include FM voice and packet radio.

(*****
PIONEER 6 - 30 YEARS OLD

The world's oldest operating spacecraft, a 140 pound probe called Pioneer 6, marked 30 years in orbit around the sun last December 16th. According to a packet posting by KD6MSM, Pioneer 6 is a squat cylinder about a yard long and a yard wide covered with solar cells.
Pioneer 6 went into space Dec. 16, 1965, on top of a Delta rocket. Since then, it has been in solar orbit on an elliptical path that ranges from about 93 million miles to about 75 million miles from the sun -- about halfway between the orbits of Earth and Venus.
Space scientists had designed the probe to last six months, long enough to pass behind the sun as seen from Earth and send back the first detailed measurements from that region of magnetic fields, cosmic rays and the solar wind of particles expelled from the sun. Although three of six instruments have failed and the solar cells are losing efficiency, the radio signal from Pioneer has never stopped.

(*****
KIDS R US

Speaking about young hams, a reminder that the Hams 'R Us Kids Net is on every Sunday at 7PM on the K2AA 145.290 MHZ repeater. Net control is 13 year old N2WXE who has been running a kids net since he received his ticket at age 10. You also can qualify for a special Kids Net certificate after you check in 10 times.

1275. Responses to inappropriate forsale postings

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: jmaynard@admin5.hsc.uth.tmc.edu
Message-ID: <slrn44pos9o.o2f.jmaynard@admin5.hsc.uth.tmc.edu>
Source record: 225204
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Would whoever it is that's anonymously sending the Guide to the Personal
Radio Newsgroups to folks who post forsale messages to the wrong group please
CUT IT THE HELL OUT?
I'm tired of getting complaints in my mailbox from folks who have been sent
3 copies of the same message from someone who is too damned cowardly to
attach their own name as the sender when passing it along.

While I'm somewhere near the subject, let me once again point out that
sending forsale postings to inappropriate groups is a Bad Idea. Forsale
postings should go to rec.radio.swap, the group chartered for that purpose,
ONLY. The profusion of forsale postings in rec.radio.amateur.equipment has
already caused that group to be dropped from some servers that, as a matter
of either law or policy, cannot carry traffic that benefits a particular
individual. (The examples I'm aware of are within the US Department of
Defense.) The same can happen with the other ham radio groups.

My objection is to the anonymous complaints only. I'm not sending them, I
have nothing to do with them, and I wish they'd stop.

1276. Re: CALLSIGNS

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: dale@exo.com
Message-ID: <4ni0g3$34r@news.snni.com>
Source record: 225205

Not all 1 x3 callsigns issued in the early 50's and 60's were
advanced class calls, many of the w6xxx and k6xxx calls
were issued to General and Technician class licence holders
Check out these calls:
K6IHM General
W6YSH General
K6MHV Tech

In 77/78 1 x 2 calls were reissued by to Extra Class license
holders. Also in 78 the change was made to WD6XXX which
had a very short run of calls, I believe they ended with WD6H??
The FCC then began with KA6XXX for Novice calls and an upgrade
to Technician you could get a 1 x 3 starting with N6??? This held true
for General class upgrades you could request a N6XXX also.

Advanced Class upgrades could request a 2 x 2 begining with KB6??
Extra Class license holders could change to a 2 x 2 if they wished
that group of calls began with AA6AA and progressed to where there
are now with AC6??

In California in late 88 or early 89 the 1 x 3 for technician class
ran out of combinations and you were isssued a KA6XXX or a
KB6XXX and were stuck with it until you upgraded to Advanced
and requested a 2 x 2.

For exact dates for the changes there is a posting on either the
FCC or ARRL Home Pages. I beleive it is under the heading of
History of Amatuer Radio Callsigns..

1277. Shareware: Learn/Practice CW

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: hbcsc274@csun.edu
Message-ID: <4nhiul$1hg@dewey.csun.edu>
Source record: 225206

When I was learning CW, I had a hard time practicing by listening on my radio. So what I did is, I wrote a program on my computer that will generate random CW sequences. This program will run on any IBM compatible. You can change the speed from 5 WPM to 40 WPM, and you practice alphabets, numbers, punctuations.
This software is free for all to try out, but as with all Shareware, you are encouraged to register if you continue to use it.
You can download it from http://www.csun.edu/~hbcsc274 and go to the software link. The program name is One-CW.

Thanks for reading.

Thanks Peter,

I think most folks either skipped the intro or misread it.

All the demographic data is just window dressing and actually could have
been left out without affecting the purpose of the paper in any way.

In truth all methods of polling are self-selected. No one is
forced to take part in any survey. As for mine, the target audience
was missed. I was seeking ALL U.S. amateurs. In that regard, I couldn't
help but have a random sampling.

It did not matter their age, class of license, length of licensure,
whether or not they designed radios or drove a bus. It didn't
even matter if they were FOR or AGAINST having a morse testing
requirement. That information was not the focus of the paper.

73,

Bruce, WB4YUC

> HIFI ?

The "FM radio" someone told you about is not an ordinary FM broadcast receiver. You need a two-way, narrow-band FM communictions transceiver (that is, a transmitter and receiver) of the sort commonly used by amateurs on the 144, and 450 MHz frequency bands. You also need a device called a "terminal node controller (TNC)", and a computer terminal or a PC that can emulate a terminal. The TNC couples your computer (or terminal) to the radio transceiver; it works a bit like a modem.

Used transceivers can be had for around $150 and up (depending on age, condition and features), and TNCs from around $60. New transceivers start around $300, and TNCs around $130. This station will allow you to exchange digital messages with other hams world wide, and even in space (shuttle, Mir space station, and some satellites).

Packet radio is one of the many communications modes available to amateur radio operaters. To operate an amateur radio station, you must earn a license from the Federal Communications Commission by passing a test in radio theory, regulations, and operating practices. Most classes of license also require reception of morse code at varying speeds. Your license grants you privledges that vary according to license class, but most give you those you need to operate packet.

You can get a book on becomming a ham that describes all this, and other ham activities as well, at any Radio Shack store. It's called "Now You're Talking". You can also get information from the American Radio Relay League (ARRL), the national organization of hams. They're on the web at www.arrl.org

Best of luck...

Mike, N4PDY

1282. GB2RS News 19th May 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <832384595snx@llondel.demon.co.uk>
Source record: 225211
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 19th of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

An RSGB Regional Open Meeting has been arranged by Fred Stewart, G0CSF, Council Member for Zone C, which covers the south-east of England and East Anglia. The meeting will take place next Sunday, the 26th of May, at 2.30pm at Rivenhall Village Hall, Church Road, Rivenhall, Witham, Essex. RSGB President Peter Sheppard, G4EJP, is due to attend, along with Executive Vice President Ian Kyle, GI8AYZ. A map of the venue is published in the June issue of Radio Communication, which is due to be posted to all members of the RSGB this week. For further details of the meeting contact Fred Stewart on 01732 780721.

Roy Clayton, G4SSH, the RSGB Chief Morse Examiner, thanks all those who helped to make the tenth anniversary weekend of the RSGB Morse Test Service such a success. Initial returns from the thirty-five GB10 special event stations show an average of 300 contacts per station. This means that the event generated more than 10,000 QSOs over the weekend of the 11th and 12th of May, many on the 80 metre band. QSL cards and award certificates will be printed and despatched as soon as the final totals are known.

There are vacancies for Senior Novice Instructors in: South and East Devon; North Devon; Gloucestershire; and the Glasgow, Kilmarnock, Motherwell and Paisley area. There are also vacancies for Novice Instructors in North Devon. Anyone interested in filling these roles should get in touch with the RSGB's Co-ordinator, Phil Mayer, G0KKL. His address is correct in the RSGB Call Book, or he can be contacted on 01202 700903.

The new membership secretary of "Bartag", the British Amateur Radio Teledata Group, is Bryan le Grys, G3GOT, whose address is correct in the RSGB Call Book. If you would like to find out more about "Bartag" or have any membership queries, please write to Bryan, enclosing a self-addressed, stamped envelope. Alternatively, he can be contacted on packet by sending a message to G3GOT at GB7MXM.

A charity bed-push with an amateur radio flavour will take place next Saturday, the 25th of May, in order to raise funds for RAIBC Northern Ireland. "GN0IBC/M", that is "Golf November Zero Invalid Blind Club Mobile", will be on the air from the route of the bed-push in Newtownards Road and Woodstock Road in East Belfast. Anyone interested in participating is asked to call 01232 471370. Fancy dress is optional.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From the Cocos-Keeling Islands, the Oceania DX Group should be active from the 18th of May until the 1st of June. The group was planning to use two stations with amplifiers, with beams on HF and verticals for the lower frequency bands. Activity is on CW and SSB on all bands. They have applied for the special call VI9CK to commemorate the 170th anniversary of the first settlement of the Cocos-Keeling islands, but may have to use VK9CJ instead.

From the Lacepede Islands off the coast of Western Australia, VK6ISL was planning activity with two stations from the 16th to 21st of May. This will count as a new island for the RSGB Islands on the Air awards, and an IOTA reference number will be issued when the expedition has been active. QSL via I1HYW if you work this station.

And from Midway Island, NH6D was due to sign KH4/NH6D from the 16th of May for one or two weeks. He will concentrate on working Europe. If you are one of the lucky ones, his QSL information is via KL7H.

Next the Rally News:

The Yeovil QRP Convention takes place at a new venue: Digby Hall in Sherborne today, Sunday the 19th of May. Doors open at 9.00am.

The Trafford Rally also takes place at a new venue today. It will be held at the George H Carnall Leisure Centre, off Lostock Road in Urmston, Manchester, near junction 4 of the M63. Doors open at 10.30 and talk-in will be on channel S22.

The Dunstable Downs Radio Club Amateur Radio Car Boot Sale takes place today, Sunday the 19th, at Stockwood Country Park, Luton, near junction 10 of the M1. The event starts at 10.00am and talk-in is on S22.

The SDX Support Group is holding its bring and buy and junk sale today, the 19th, at the Maryhill Central Hall, Maryhill Road, Glasgow. Doors open at 10.30 am.

And the Mid Ulster Amateur Radio Club Rally also takes place today at the Silverwood Hotel in Lurgan, County Armagh. Doors open at 12 noon and talk-in is on S22.

The Plymouth Radio Club Carnival takes place on Saturday and Sunday, the 25th and 26th of May, at Tamarside Community College near St Budeaux. For more details ring 01752 563222.

The East Suffolk Wireless Revival takes place next Sunday, the 26th of May, at the Maidenhall Sports Centre, Ipswich, in Suffolk. The event features a bring and buy and car boot sale, a vintage radio display, Novice stall, a rig 'clinic' and antenna testing. Talk-in will be on 2 metres channel S22, and for further details you can ring 01394 271257.

The 70 centimetre beacon at Bristol, GB3BSL, which operates on 432.934 MHz, has been operating at a reduced ERP since the 8th of May, due to

engineering work on the tower. This work will last about two months. The co-sited 1296MHz beacon, GB3USK, is unaffected.

The UHF repeater GB3CL, which operates from Clacton, Essex, on channel RB9, returned to service on the 11th of May. It had been off the air for two weeks whilst a faulty power supply was replaced.

Now for the HF contest news:

The CQ WPX CW contest takes place next weekend, from Zero Hours UTC on Saturday the 25th, for 48 hours. This contest is on all bands from 160 to 10 metres, excluding the three "WARC" bands. Work any station and give an RST report and serial number.

Next some VHF contest news:

A series of 2 metre Contests is taking place this weekend. The main event is the 24-hour 144MHz contest which runs from 1400 UTC on Saturday until 1400UTC today, Sunday the 19th. A six-hour single-operator contest also takes place within this period. Finally, the first 144MHz "Backpackers" contest takes place from 1100 to 1500 UTC today, the 19th. The rules for these contests are in the September 1995 RadCom.

Next Sunday, the 26th, the first session in the RSGB 10 GHz Cumulative contest takes place between 0900 and 2100 UTC. The rules are in the March 1996 RadCom.

And now the solar factual data for the period from the 6th to the 12th of May, compiled by Neil Clarke, G0CAS:

Solar flux levels varied little and averaged 75 units. The 90-day solar flux average on the12th was 71 units, one unit up on last week. There were C-class flares on five out of the seven days, which increased the X-Ray flux levels to A7.2 units by the 9th. The average was A5.5 units. Geomagnetic activity remained at "quiet" levels throughout and averaged Ap 6 units. Another high-latitude, reverse-polarity sunspot group emerged on the 10th. The location and magnetic character of the group suggest that it is a new cycle sunspot region, which is further evidence that the sunspot minimum is now not too far away.

Now the ionospheric data for Central France. The period from the 3rd to the 9th of May saw levels decline from those of last week. The average was 6.3MHz. On the 4th, 5.8MHz was recorded and by the 6th levels had increased to 7MHz, but then declined to 6.5MHz on the 9th. The darkness hour lows increased from 2.9MHz on the 3rd, to 3.8MHz by the 8th. The average was 3.1MHz. The daylight highs took place between 2000 and 2100 hours every day except on the 6th, when they were at 0900 hours. The darkness hour lows took place between 0100 and 0400 hours. Blanketing E took place during the afternoon on the 9th.

And lastly the solar forecast. This week the quiet side of the sun is expected to be looking our way and solar activity is expected to be at very low levels. Solar flux levels are expected to decline to the high

60s later in the week. Geomagnetic activity is expected to be at "quiet to unsettled" levels for most of the week. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows could be up to 11MHz. Sporadic E openings should now start to become more intense, with openings possible at VHF.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Delta and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Alfa series.

>tests. Gary is fond of calling it "hazing". It used to be for
>emergency comms, but that purpose is all but gone now. I fully
>agree that easing of requirements is a problem. The legitimate
>purpose is knowledge of safe operation and RFI avoidance.

Incorrect. The "Constitutional Rights" type argument you advance
is another issue all together, and it has yet to be discussed
in court. It's awaiting a lawsuit so that it can be argued.
For now, the subject is ham radio, and the legitimate purpose
of testing in the Amateur Service is indicated by Part 97.1, of
which "safe operation" and "rfi avoidance" is only a small part. The
scope of what's included in Part 97.1 was once reflected in the rather
challenging exams of the day. The issue now is de-facto easing
of requirements, code and theory, and the amateur backlash
that's come from it.

>The current tests, which publish all the answers in advance,
>aren't tests at all.

That's what I've maintained all along. You haven't disagreed
with me.

>Substituing CW tests for tests of genuine technical knowledge, in
>some sort of effort to "keep out the riff-raff", not only gives
>Gary something to sink his teeth into...

If learning cw didn't have some part in the learning of things
technical, I'd agree with you. The relationship is subtle, but
it's definitely there. Actually, you agree, as you indicate below:

>I never said we should abandon it. I agree that it serves an
>important purpose in the amateur community. It's a very basic
>communications mode, well suited for EXPERIMENTATION and use with
>inexpensive equipment, with about 1 to 2 S-unit's advantage over
>voice modes. That is significant for us, where it is not for
>public service/military/industrial users, as part of our charter
>is TECHNICAL DEVELOPMENT...Even if we eliminate Morse Code tests,
>amateurs will do themselves a disservice if they abandon the mode
>entirely.

Actually, MOST of our charter is based on technical learning.
Unfortunately, eliminating the Morse Code tests may have the effect
of eliminating the mode entirely, and the technical learning

that partially derives from it. Testing ensures the mode will not be eliminated, simply because those who learn it will see its value. Otherwise, they can (and in many cases will) miss it.

The fact that I defer to someone else who has already posted extensively
only indicates that I have no intention on re-inventing the wheel.
Furthermore, as Coffman has rarely if at all been contradicted in his
postings on this topic, I defer to those whose expertise and ability to
expound on these topics is much greater than mine.

>Do you even understand what system gain is?
>Let's take an example in the real world. A cw rig with a 250Hz BW has a system
>gain advantage of 5.1 dB over the 450 Hz BW in the PK-232, all else being equal.
>Now, are you able to calculate this yourself, or do you need to go running off
>to someone else?
>

In fact, Burke discussed but one factor of system gain. That comparison
of the relative merits of the necessary bandwidth of a channel over
another that is wider. I doubt that a comparison of just one factor out
of many would qualify as being a definitive measure of Morse code over
the capability of a PK232.

>And system gain is only one small measure of a system, but this was the argument
>presented and this is what I stuck with.

But to ignore any other factors would lead the uninitiated down the
garden path that Morse code was indeed more efficient. This no longer
true, and hasn't been for years. See Ford's product review on the P38
board in August 95 QST where he was able to demodulate Baudot signals
when indeed he could not even hear them.

>Further, to optimize the bandwidth,
>we could get down to 100Hz - and still be able to copy 20wpm,
>yielding another 7.95 dB of system gain, for a total of 13.05 dB.
>Remember, the argument also stated "mode available."
>

Of course - at the cost of sending the Morse code at a slower signalling
rate in order to overcome filter ringing.

>You have also incorrectly stated this is MY argument.
>This was the argument of the respondants! Where is my bias,
>I supported it where appropriate, and refuted it where appropriate.
>

No, that is not true. Some of the respondents claimed that Morse code was superior to all other modes. Not only did Burke agree with that claim, he further emphasized that this was true mathematically. When challenged, he claims that Morse code is superior mathematically because is uses a smaller bandwidth than a commercial mult-mode controller. The problem is that gain-bandwidth product for a system is but one figuire to determine over-all efficiency. To use but one factor is misleading.

>Efficiency is relative anyway. I can prove several ways in which
>cw is more efficient than any other digital mode currently
>available, some non-mathmatical. Now these will be MY arguments:
>
>1) The cost of a computer, used - $500.00. Muti-mode TNC, used - $150
>Let's make the software FREE! - Total $650.00 The cost of a straight
>key from Radio Shack - about $6.00 - $7.00. Which system is more
>economically efficient?
>

The relative economies compared to the two systems was not even discussed in the paper. In any case, in order to give a reasonable comparison between the two modes, one would also have to include the resource expenditure in order to train an individual to be able to be a competent operator at 20 words per minute. In terms of man-hours alone in training time, Morse code doesn't even come close. Besides, if one were to scrounge a bit, one could get a dumb terminal at no cost, and probably an older generation computer for nothing as well. Software? There are a number of Baudot/Amtor programs at the ftp sites of the IDRS and ARRL. A terminal unit to interface the computer/terminal to the rig would cost just a few dollars - something simple like a couple of opto-iolators to convert the RS232 pulses to FSK switching. If the rig is not FSK ready, one just need to add a varactor in the VFO and this will shift the signal the required 170 Hz. Cost? Probably about 20 bucks.

>
>The cw op has no problem in understanding this message and will
>quickly fill in the blanks without asking for a resend.

>Which system is more robust in the area of fault tolerance?
>

This true only under two conditions - the receiving operator is aware of the QBF string, or speaks English. If the message was in a language other than English, the CW operator would be out of luck. As an example:

Le **steme de detre**e et de se**rite radio actu*l fond* *ur le code mor** et les gar*es d'ecoute* sera rem*lace pa* le **steme mon*ial de detre**e et de se**rite en mer (SMDSM), de *er fevrier, 19**.

(My apologies for the lack of accents).

An English speaking operator would be at a disadvantage because he would not be able to fill-in the missing letters. No such concern when a digital mode is used.

>3) Hurricane Andrew has just blasted through. You manage to
>save most of your equipment, but only have one storage battery
>and a small solar panel to charge it.
>
>Do you operate cw with a straight key or bug, or run
>your computer, tnc, and a printer??
>
>Which system is more energy efficient?
>

More to the point, which, under these circumstances is more likely to get through? Since the digital systems are capabable of communicating during propagation conditions that would be impossible for Morse code, use of digital systems is beyond question. Not only will digital modes get through when Morse code will not, there is a network of Clover/Pactor/Amtor BBS's that are constantly scanning the amateur bands listening for other stations to call them. No such networks exist for CW. Furthermore, these networks have also VHF packet/e-mail gateways, further enhancing the emergency capabilities of digital communications. What can CW offer? Often times, it is limited to just random chance communications. It is for this reason that Morse code rarely plays a insignificant role during emergency communciations.

>4) Not difficult enough yet.
>Let's go back to the hurricane, this time, only your tranceiver and

>as is your computer. Your TNC powers up, but you can't tell anything
>else. Your cw key is also missing. So now what. Do you sit on your
>duff complaining that you can't communicate, or do you fashion a key
>out of scrap metal and get on the air?
>
>Which system is more robust now??

Fair enough. You've been able to dry out your computer and find that it works just fine and the multi-mode controller is operaable. But because you sustained a head injury, you are deaf. Which system is more robust

now?

We can go on and on with these silly little scenarios until we go blue in the face, it still doesn't make it any the less true that Morse code communciations is not as efficient as digital communciations.
>
>5) Add to that the fact that cw is the ONLY digital mode that can be
>copied both by machine and by hand makes it pretty damned versitile.
>Let's see you copy CLOVER by hand....
>

or let's see if Burke can send his picture on CW...

>Jim, you obviously don't understand all the complexities and goals in
>designing communications systems.

Oh really? Considering Burke's inept survey, I doubt that his opinion on my technical competency would be of much value.

>Indeed, if I wanted to design
>a digital system that could operate in a 100Hz bandwidth, yup,
>it would work great from a system gain standpoint. But, who the hell
>would buy it??

I know I wouldn't because I also know that basing system performance on one parameter is foolish to the extreme.

>Would the resultant throughput justify the
>huge increase in cost. Besides, once again, I'll point out,
>the argument was "MODE AVAILABLE." And of those mentioned, I specifically
>pointed out CLOVER as being the best avaiable.

Oh yes... clover is the best available. Quoting from the survey:

"Those who argue the efficiency of Morse Code are indeed correct - theoretically. However, seldom are propagation conditions ever so bad that another mode would not work. Some of the newer digital modes, such as "CLOVER" which adapts on the fly, come about as close as one can to beating Morse Code out entirely under unfavorable conditions. Add to that, the fact that most receivers are manufactured to cover operational requirements as generally as possible, and the argument dims. However, for its simplicity and independence of special equipment beyond the operator/radio, Morse is indeed the most efficient of modes."

Faint praise indeed. I would be pleased if Burke is able to support the statement that Clover alone approaches the capabilities of Morse code, considering the number of articles that refute this claim. As an example, Ford, in his review of the HAL P-38 board, Aug 95 QST stated that he could even demodulate Baudot signals while he could not hear them. As I have stated before, Burke has inadequately researched this topic because the literature in the public domain doesn't support his view.

>But, it has two
>serious drawbacks. It is expensive and propriatary to HAL. How
>does that factor into efficiency?

This is a new factor which was not even discussed in the publication. None the less, in order to have compare the true costs, one would also have to include the costs of training and individual to be competent at 20 words per minute. Under those circumstances, the HAL board is a better buy.

But, just because one cannot afford a piece of equipment, that doesn't make it any the less efficient. It only makes it unobtainable. As an example, I would love to have a Kenwood 870. It's a great rig, but due to my financial circumstances, I cannot afford it. The fact that I cannot afford one of these fine boxes doesn't detract from the fact that it is a great radio.

In like manner, I do indeed have a P-38 board, a PK-232 and a KAM. I also have an amateur certificate for which I had to copy, at that time, 15 words per minute Morse code for three minutes with no errors. Not only that, but I also hold a 2nd Class certificate, where the Morse code was 20 wpm for five minutes plain language, and 16 wpm cipher groups. I stand to be corrected, but I suspect that Burke is arguing from a disadvantage. I suspect that he has never operated clover on a continual basis. Therefore, since he has never operated at all with Clover, what is his technical competence to claim that Morse code is superior to Clover?

>What are the odds of communicating
>with someone else using CLOVER vs cw.

They are about the same now.

Can CLOVER operate in a
>net or roundtable mode??

Better still, Clover, amtor, and pactor BBSs are installed and scanning and listening throughout the amateur allocations. This means that the chances of contacting a board are increased because they are continually scanning a number of frequencies in different bands. Furthermore, there is no need to wait for a net in order to pass the traffic, it can be passed immediately upon linking with with a BBS. Moreover, increasing number of the the BBSs have VHF Packet/e-mail gateways, further enhancing their capabilities.

>Can this be a measure of efficiency??
>

More to the point, it is much more effective.

>BTW - if you would have CAREFULLY read my posting you would
>have understood this was a class project.

Then both Burke and his collegues are equally inept.

>Further, if you would have
>bothered to read the attached survey, it was made quite clear that this was NOT
>a technical survey, but rather one of observation. It would have
>served absolutely no purpose to run on for pages about symbol rate,
>encoding/decoding techniques, link margins, etc.
>

It was Burke who made the technical claims of the superiority of Morse
code, not I. My contention is that he doesn't know what he is talking
about and there is no documentation to support his assumptions.

>The survey itself also pointed out that this was
>NOT a funded research project, but a class project.
>
>That's another point I wish to clear up. CLASS PROJECT, time and
>resources were scarce. It was clearly addressed in the fourth
>paragraph of introduction that there were severe limitations.
>I am well aware that this was not a truely random sample.
>So what would that take??

A clear and honest statement that this survey was not representative.
Quote:

"One of the problems with this study will be total accuracy. The number
of questionnaires returned totaled 54, this represents less than 0.01% of
the total amateur population in the United States."

As a replacement for the first sentence I would recommend the following:

One of the problems with this study is that it has no accuracy. The
sample size was not large enough nor was it random. Therefore, it is not
representative of the amateur population in the United States nor does it
pruport to do so.

>1.2 million envelopes* 39 cents each = $468,000 OUCH! - even at half of that...
>Yes, 1.2 million is correct, a return envelope is necessary.
>
>So, who is going to put their money where their mouth is???
>

As I stated earlier, a sample of 1500 to 2000 amateurs would have been
more than sufficient.

>I had one semester to do this whole thing and little resources.
>Therefore, I used the resources I had. Internet and packet access as well as my
>local clubs. For whatever reason, I did fail to mention that.
>
>As for those who think these were 54 self-selected replies?? Self-selected?
>How the hell do you draw that conclusion? What makes YOU qualified to draw
>such conclusions? That was all the response I got.

Although I did not make the statement that it was self-selected, I agree
with it none the less. It was self-selected because the respondents
selected themsleves, not the individual(s) conducting the survey.

>This is a really sad statement about the hobby in and of itself.
>

I agree. Already there have been a number of congratulatory messages to
Burke, commending him on the marvellous piece of science. It has been
shameful to read them.

>As for methodology, I followed standard practices the best I could within
>the restraints given.
>

No, Burke did not use acceptable practises. Burke made a survey and then
had the audacity to claim that the report was not "totally accurate". In
contradiction, Burke's report is drivel.

>BTW - I made no claims that this was a definative survey, certainly not a
>statistical survey. This was strictly a survey of observation, sociology,
>specifically, anthropology.

Balls. Burke put out a call for respondents, got his results and then
turned around and wrote a report on his findings which don't stand up to
scrutiny.

>It was much smaller than I would have liked and obviously you are
>seeking something more, sorry folks. I took advantage of a situation presented to
>me.
>
>As it is, a friend donated space on his homepage so I could fullfill the promise
>to those participants who asked to see the results. I did not choose the link wording
>on his page. If that is what has you so damned worked up; At my request,
>he is changing it - there, your spleen feel better now?
>

No I am not. The published results in no way reflect the amateur
community. I would be more please if Burke would include such a
statement and that his contention that Morse code is superior to all
other available modes is seemingly based on so narrow a parameter, it is
misleading in the extreme.

>At least I DID something, you can't as yet say that.

Oh I agree, Burke did indeed do something, but has no value what so ever.

>Was it perfect, hell no,
>I know that. But the results are what they are, whether you agree with them or not.

I would agree that the report was imperfect. In fact, it is useless.

>But don't ever think you'll get away with unfounded statements such as my
>being ignorant.
>

I just did and will continue to do so.

>Regards,
>

Yes, it does, that was the very point of the argument.

OOK Morse at 20WPM, requires less BW than packet, rtty, and amtor,
so it is quite relavent. Your right, using those parameters, that can't be proven

wrong and that is no doubt why the folks who used those very parameters.

You have now won the brass ring!

Do you think the popularity of 2 meters and 440 has anything to do with
the swelling of the no-code tech licenses right now? How about the fact
that propagation is pretty low ? Maybe why noone is knocking down doors to
try and get on HF. Alot of the problem is, the lower you go, the more room
you require for an antenna. Could be one of the reasons, since alot of
younger hams are living in apts right now, too.

1291. Budget 2m Packet?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: RFBG67A@prodigy.com
Message-ID: <4ni9tp$14ng@usenetz1.news.prodigy.com>
Source record: 225220

Does anybody know a cheap way to set up a packet station on 2 meter? I already have a 386 computer, a 12v power supply, and a shack to put the equipment (I'm working on making an antenna). I figured that for packet I will probably only be using 1 or 2 frequencies, and that I probably don't need any features like T-squelch or anything. Does anybody know of any cheap 2 meter rigs with minimal features (and what considerations I need to watch for in getting a unit for packet operation), and any cheap but dependable TNCs?

Thanks !

I convinced my friend to go for a no-code tech license, and was wondering if anybody knew where there is a place where he can take his test. Is there any testing group in the La Verne / Pomona / Claremont California area? (He lives close to the L.A. county fairgrounds / Cal. Poly Pomona.)

Thanks !

1293. Re: Antennas Look Good When They're Needed

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: Big.J@bbs.bbs-la.com
Message-ID: <8323689162402@bbs.bbs-la.com>
Source record: 225222

"I think this is a tough sell. You would have to convince the
"neighborhood that there's a reasonable possibility that electricity
"and both wired and cellular phones will all be down at the same
"time,
.....
YB During the 1994 quake in LA the ENTIRE phone system was
seriously overloaded. It was a day before I could call
from North Hollywood to Van Nuys, 5 miles away, and It took
over 3 days to get a phone call out to the east. for a
couple of hours even the police channels were overloaded.

During the 1989 quake in San Francisco my relatives in
Minnesota could not communicate with san Jose over ANY
phone systems. But they reached me in LA and I reached
a ham about 5 miles away from San Jose and he was able
to call locally for me. Up till the last 5 years or so
the only Ham stations that could handle phone traffic
were fixed (base) stations. With only about one ham for
about every 200 citezens, we have too FEW antennas up.
.....

" and that for some reason, they or a neighbor would be unable
"to go for help.
.....

YB That would take way too long and 2 or 3 cars for each
emergency vehicle on the road would be impossible here in LA
As it is I think traffic would be totally gridlocked here if
something is not done about the congestion.
.....
" You would also have to convince them that the ham
"next door has full emergency capability,
.....
YB Every ham should be and make it known to the neighbors
beforehand so it is less necessary to,, ** See Below

.....
"canvass the neighborhood for emergencies in the event of a disaster,
"that he has the equipment to communicate with the appropriate
"emergency communications centers, and that those centers won't also be
"off the air in the face of a disaster this severe.
.....

YB Through relays and on the scene handheld and packet
relays, virtually no centers will be cut off long.
.....

" In addition, you
"would have to convince the ham's immedate neighbors that his antenna
"will functionally survive such a disaster, rather than simply falling
"on their house.
.....
YB Of course you must have a safe installation, and
demonstrate that the mobile antenna and dipoles will
continue to function as a backup, but with less reliablity
in poor conditions or restricted power and that a fixed
antenna is necessary. You may have to dispatch your mobile
station into the field.

.....
"Considering that most people in metroploitan areas where the
"restrictions are the most severe have no memory of such a disaster
"ever taking place, I don't know how you would do any of this.
.....
Id love to hear and discuss more ideas for neighborhood
publicity and emergency planning on a more local level.
(like everybody has their local ham just like they have
a school or polling place.

Holy smokes, Drew!! Now I'm convinced that you do not own an HF rcvr.
"Too few" amateurs on HF? I wish that were the case.

Also, there is no "pressure from commercial interests" with regard to
our HF spectrum. In fact, we've gained spectrum over the last decade (the
12, 17, and 30 meter bands), and there is a current proposal to give us
even more (one proposed segment is close to 5 MHz, another is the 1750M
band).

So no need to increase the number of folks on HF - rest assured we're
doing a wonderful job in regard to the retention of that spectrum without
you.

>Translation: the CW barrier helps ensure that only individuals who are
>"one of us", "real hams", etc., who pass our little initiation rites will
>be allowed access to our private good 'ol boys club on HF.

Private? Not much privacy - there is only 3.75 megacycles available. But
you've passed the 5wpm test - you're free to operate on there. (If it
really were a private club do you think we'd let you come aboard?)

>Sorry, but the barriers are being knocked down. Now that no-code Techs
>comprise the largest class of licensees, it's only a matter of time
>before the CW burden is lifted on HF as well. Either voluntarily, or by
>litigation. My guess is that the good 'ol boys will continue to resist
>and the issue will eventually be settled in the courts.

Well, I'll be there pointing out that the no-codes have over 97% of the
US amateur spectrum already available to them, which leaves under 3%
reserved for the coded licensees.

Yes, I'm sure it does. Considering the remaining VHF/UHF bands are already sparsely populated, why would a codeless tech want to invest his hard earned money on equipment that wouldn't allow him/her to talk to anyone?

> How about the fact
> that propagation is pretty low ? Maybe why noone is knocking down doors to
> try and get on HF.

From what I can see, no-code hams are trying just that by whining about having to copy 5wpm CW in order to get on HF. Reduce the alledgedly difficult requirements and there would be more hams on hf than you could shake a straight key at.

> Alot of the problem is, the lower you go, the more room
> you require for an antenna. Could be one of the reasons, since alot of
> younger hams are living in apts right now, too.

You must be right on this one. No hams lived in apartment buildings before the nocode license became available. That must be the reason. Are you trying to say that if tomorrow the FCC said, "all no-code techs can now operate SSB on 80 meters," there wouldn't be a tremendous rush of codeless techs on 80M?

Source record: 225230

>>
Could someone tell me what CTCSS is or point me to a FAQ, etc.
<<
CTCSS (COntinuous Tone Coded Squelch System, or somethign like that)
sometimes called PL, (which is the Motorola trademark... "Private Line")
is a "subaudible" tone that is transmitted along with the regular audio.
It is in
the frequency range of 60 - 200 Hz or so, and is definately audible if you
listen
for it. A radio so equipped and set, listens for the tone when it
recieves a transmission,
and only opens the squelch if it hears the proper tone... it closes the
squelch when
that tone disappears.

It allows multple (though not simultaneous) users of the same frequency to

not have to hear each other... the radio stays squelched until YOUR tone
comes up. It is also used to prevent repeaters from retransmitting audio
without the tone, so interference is reduced. IF a repeater retransmits
that
tone, then you can set YOUR radio on PL and turn the regular squelch
way down.... you will be able to listen to weaker signals with less
annoyance
that way.

hope this helps. Jose KD1SB

Probably nothing will be done. The FCC mean well, but their resources are
tied up with higher priorities. Another egregious 75 meter jammer,
WA9KJI, who announces freely to the world the fact that he is jamming,
along with laboriously elucidated reasons for it, has been operating like
that for years with no FCC action yet.

> and down the 75 meter band jamming. Of course during the day he is on 14.313

1303. This Week in Amateur Radio #164 (for air through 5/24/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <phGO5Do.sanderman@delphi.com>
Source record: 225232

Here is a summary of news items covered on edition #164 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 24-May:
-
1. FCC Establishes New Part 95 "Family Radio Service" at 65 cm
2. FCC Warns Suppliers on Sale of Amateur Gear for "Freebanders"
3. Commission Opens New Call Sign Blocks for Puerto Rico
4. Gettysburg Corrects Error, "Backfills" 7th Area Call Signs
5. Phil Karn, KA9Q, Finishes Work on New 1200 Baud Packet Protocol
6. Former Midwest Division Vice Director Dick Pitner, W0FZO, SK
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. "The RAIN Dial-up" from Chicago
9. FCC Ponders Regulation of Internet Telephone Calls
10. Special Event Station Calendar with George Bowen, N2LQS
11. "Amateur Radio Newsline" - Edition #979 from Los Angeles
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Mr NoCode,

When your area will be hit by a disaster, you can forget about all you
fancy "digital" stuff. No more Internet (What a relief), finito le packet,
no more VHF/UHF. Cellular phone gone. All the fancy DIGITAL stuff will be
dead.

Check out what happened in Seatle. That was a small tremor only...

The only thing left is the HF Xver, mike and if there is no propagation...
... THE KEY.

BTW, I am not against digital stuff. I am an electronics eng. and a
system software designer.... So don't talk to me about digital stuff
I know all about it.

Sweet dreams, CW Nightmares ..._ ._

I don't know about other states or countries, but in Indiana,
the book we get from the Bureau of Motor Vehicles with all the
rules, licensing info, etc. in it explicitly says that driving
is a privilege - not a right. Our rules and regs (47 CFR part 97
for those of us in the U.S.) don't come right out and say that,
but that's the general sense of the rules (see particularly
97.1 and 97.101). What's this "good amateur practice" stuff,
anyway? Sounds a bit like codifying (no pun intended with Morse...)
the traditions of Ham Radio. Is using CW necessary to maintain
the tradition? If there was a simple answer to that one, this
thread wouldn't exist! I personally am an advocate of no-code
licenses at the lower levels, but I think advancing to the top
should require it -- not because it's something you MAY CHOOSE
to use, (the point of disagreement in this thread seems to center
on this choice), but because it's a part of the history and
tradition of ham radio. No, CW isn't outdated. It's more than
a mode -- it's part of a tradition.

Is it the hams that "refuse to allow others into their '"good 'ol boys"' private club"
or is it the FCC and the ITU?

Oh, and BTW, those new, young hams will not really be taking the place of the
oldtimers until they pass their code tests. :)

I whole heartedly agree, I posted in a different forum on
that subject, called "ham radio discussions". I think it's in
a different group of "forums" .. This is USENET isnt it??
I am still not familiar with all of this.

Please reply here, and also reply to Big-J @kincyb.com in case
I have trouble here..Dont forget the "-" in Big-J at the kincyb
address only.. Thanks and 73...also looking for a radio club
in the Albuquerque NM area...

>analog HF rig and an ICOM 781. An appropriate comparison would be to
>compare planes, trains and automobiles. The key word here is MODE.
>Mode of transmission. Mode of transportation.

Fine! Let's do it your way...comparing mode of transmission to mode of transportation...

A private automobile is the dominant means of transportation in this country. If someone chooses an automobile as their means of transportation, they do not have to pass a test on proper operation of a motorcycle, a school bus, or a semi-truck. However, if someone CHOOSES to use one of the above alternative modes of transportation, they have the option of showing proficiency by means of special testing. If they show proficiency and pass the exams, they are then given the additional privileges of using their preferred mode of alternative transportation.

Again, this is as it should be.

ARLP020 Propagation de KT7H

ZCZC AP41
QST de W1AW
Propagation Forecast Bulletin 20 ARLP020
From Tad Cook, KT7H
Seattle, WA May 17, 1996
To all radio amateurs

SB PROP ARL ARLP020
ARLP020 Propagation de KT7H

Solar activity was up a bit last week, with the average sunspot number about 20 points higher than the week previous, and solar flux up less than three points. The most disturbed days were May 13 and 14, when the A index was 13 and 15. Otherwise, conditions were stable.

Last Fall we were excited to report sightings of the first sunspots from the upcoming Solar Cycle 23. Now the NOAA Space Environment Service Center has changed its report and is not expecting the new cycle to begin until later this year.

Watch for the solar flux to dip below 70 after May 19, then above 70 after June 2, peaking in the mid seventies around June 9. Conditions should be very stable from May 21 to 27, then an active geomagnetic field is expected around June 7 and 10.

Sunspot Numbers for May 9 through 15 were 17, 33, 53, 35, 38, 30 and 26, with a mean of 33.1. 10.7 cm flux was 76, 77.5, 76.5, 73.6, 72.7, 71.8 and 70.9, with a mean of 74.1.

This week we have a path prediction to Midway Island from the East Coast, middle, and West Coast of the United States.

From the East Coast, 80 meters should be good from 0630 to 1030z, 40 meters from 0530 to 1100, 30 meters from 0430 to 1230, 20 meters from 0130 to 0630 and again around 1200.

From the middle of the continental United States check 80 meters from 0630 to 1130z, 40 meters from 0530 to 1230, 30 meters from 0400 to 1400 and 20 meters from 0200 to 0700.

From the West Coast check 80 meters from 0600 to 1400z, 40 meters from 0500 to 1500, and 30 meters from 0230 to 1730. 20 meters

should be open except from 1100 to 1400, with the best propagation
around 0600 to 0830 and around 1600. 17 meters looks good around
1900 to 0730, with best signals around 0500.

>I expect this sort of bickering
>will never end until 1.) the FCC finally comes to its senses and 2.)
all
>of those of you who both remember these times and are too set in your
>ways to change DIE OFF.

And it's happening, even as we speak. Every day, a few more of the most adamant pro-coders, the ones that refuse to allow others into their "good 'ol boys" private club on HF, the ones who say "I had to learn it so you do too", pass on to that great brass key in the sky. As they go silent key, more and more new, young, hams take their place...most of which have no interest nor desire to bother with an antiquated mode of communication like Morse.

It's just a matter of time.

Be careful with the attribution lines, Bill. I didn't write the first sentence. Code is my favorite mode - I surely know the spelling of its inventor. But the spelling "Morris" first appeared on here as a little prank - something about Morris The Cat.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 MAY AND FORECAST FOR 18 MAY - 20 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 16 May
Daily Proton Fluence >1 MeV: 5.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 8.0E+06 (normal)
X-ray background: A1.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 May 19 May 20 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 16 May
Learmonth 8 2333 1111
Fredericksburg 12 13
Planetary 10 10

Observed Kp for 16 May: 2342 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
18 May 10 Quiet to unsettled
19 May 10 Quiet to unsettled
20 May 16 Unsettled to active
COMMENT: Unsettled to active conditions are expected 20-21 May
due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
17 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
18 May Normal Normal Fair
19 May Normal Normal Fair
20 May Normal Fair Poor
COMMENT: HF conditions are expeted to remain fair-good until
20 May. Degraded conditions expected at times for mid-high latitudes
for interval 20-21 May.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
17 May 8

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
18 May 10 near predicted monthly values
19 May 10 near predicted monthly values
20 May 10 near predicted monthly values
COMMENT: Degraded HF conditions may be experienced for southern
region during interval 20-21 May. Depressions may be experienced
on 21 May for southern region only.

It is a well known FACT (from the current Surgeon General life line
studies and fire hydrant painting training centre) that CW ops live
7.3 to 8.8 percent longer than no-code types. Has to do with soothing
activities and pleasant thoughts that go with the CW ops knowing that
they have conquered something that others have failed to do. Check it
out with the famed dr. bafoofnik and my buddy Ohrstal Fembrock.

If you live and are licensed in the US, do not operate SSB from 10.100-10.150 mHz. I is reserved for CW _AND_ specified digital stuff. But it is spectrum reserved for CW. Semantics... ain't technology grand!

Todd,

The gain in signal-to-noise occurs on both transmit and receive. The
transmit signal is more effective because its energy isn't dispersed
over as large a bandwidth, and the receiver effectiveness improves
because its noise bandwidth can also be reduced.

I don't believe that is correct. If the bandwidth of both the transmitter
and receiver change together, i.e., as long as the receiver still
captures the same portion of the transmitters bandwidth, all that
is done is the amount of noise that has to be contended with is
reduced by the amount of reduction in bandwidth. You don't
achieve that gain at both ends of a link.

Well chaps, I hate to to disapoint you but I swear that the average Ham in Australia is retired and in a wheelchair !!!. There are very few new hams joining the fraternity because of other less costly alternatives to Amateur Radio being available.

Because of most hams being retired and having limited cash reserves, there is little interest in new technology as it is getting too expensive for them. We have NO 56KB backbone links here in Australia. WE have next to no 19k2 links here and many reckon there is no need to go beyond 1200 baud.

We operate the wonderful "Rose System" which means you have to have an address book with you if you want to use it. Nothing like Flexnet.. So what should we do ??. Most of the old timers hate my guts because I get up and tell them to pull their heads out of the sand. Also the absolutley FARSICAL arguements that Amatuers put up to keep CW is a joke. A bunch of old guys wanting to protect their patch !!!

We can't compete against the internet and I don't think we should. I think we should promote more co-existance with the aid of wormholes and use it as a tool. Conversely I don't think that a wormhole should replace a GOOD RELIABLE HF link, especially if that link was 1200B PSK.

Anyway, best of luck and I'll get back to my headbutting !!!

Cheers..Pete..vk2yx

Anyone ever hear of a commercial radio a TAD M8?
It is a VHF high commercial rig.

Specifically I would like the microphone pinout.
Can anyone help?

Thanks
Hank

1330. What is CTCSS subaudible tones?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-17 00:00:00 UTC
From: Jeff Firman <jfirman@umabnet.ab.umd.edu>
Message-ID: <Pine.A32.3.91.960517095718.21973B-100000@umabnet.ab.umd.edu>
Source record: 225284

Hi,

I hope this is the right group to ask this question. I came
across a subaudible tone encoder/decoder kit in the Ramsey catalog based
on the Motorola PL tone generator. Apparently this is also known as
CTCSS and is used in amateur radio.

I have an application for audio tone control that needs to be
used along with normal sound without the tone control signals being heard
by the listener. Could someone tell me what CTCSS is or point me to a
FAQ, etc.

I prefer a direct email response if possible since I am not a
regular reader of this newsgroup.

Thanks,

Jeff (jfirman@umabnet.ab.umd.edu)

> If these "instant amateurs" can flood into HF, without real effort,
> chaos would reign.

Doubtful. We should only be so fortunate as to have too many licensed amateurs on HF. Instead, we have just the opposite problem...too few of us to insure our present allocations in the face of pressure from commercial interests. Removing the CW initiation rite would go a long way towards increasing our numbers and assuring retention of our present frequency allocations.

> The CW barrier helps ensure that only individuals who

enter
> the HF bands. Because their priveleges are hard-won, they will most
> likely be by those who WILL behave responsibly, and operate
proficiently.
> In that regard, the CW requirement is a highly useful screening
device.

Translation: the CW barrier helps ensure that only individuals who are "one of us", "real hams", etc., who pass our little initiation rites will be allowed access to our private good 'ol boys club on HF.

Sorry, but the barriers are being knocked down. Now that no-code Techs comprise the largest class of licensees, it's only a matter of time before the CW burden is lifted on HF as well. Either voluntarily, or by litigation. My guess is that the good 'ol boys will continue to resist and the issue will eventually be settled in the courts.

There were no N calls 20 years ago that I remember. If someone can dig up a 1976 callbook maybe they could confirm this.

>J>Times change - blocks get used up. I wonder if we'll ever see a day
> >when one of the call districts will have to use a 1x4 or 2x4 format?

>Those two formats do not conform to ITU regulations.

ITU has alloted the blocks AAA-ALZ, KAA-KZZ, NAA-NZZ, and WAA-WZZ to the U.S. How our FCC see fit to utilize those blocks (3 letters for maritime shore stations: NMO or KPH, 4 letters for ships for bcst stations: KHYF or WBCX, letters and numbers mixed: WNSL461 for Honolulu FD, or K27BD for a UHF TV translator) is of no concern to the ITU.

>it's 450 Hz BW. My support of that argument was then indeed correct.
>Especially since the argument was limited to current modes
>available.

Wait, wait, wait. This example has nothing to do with OOK
morse. In fact, this example is misleading in that you're
apparently comparing a CW station to a packet station.

The only thing your argument supports is that overall
system gain is improved when the bandwidth of the modulation
is decreased along with the bandwidth of the receiver. That's
nothing special.

I'd like to see you compare G-TOR or even PACTOR to
CW under noisy conditions. You'd probably be surprised.

Of course, you can also improve system gain by using
a coherent modulation mode, too. Again, OOK Morse is

nothing special.

>So far, no one has demonstrated that this is not correct other
>than to say it is incorrect.

Actually, since all you're saying is that narrow-band modulation
and receivers with matching bandwidth improve system gain, no
one can prove you wrong. However, OOK Morse code has nothing
to do with this.

How much RF theory could you learn in 15 minutes per day over a couple of weeks? You easily watch more than 15 minutes of TV commercials per day, but you're complaining that that was too much time to spend learning code?

If you are so smart, and could write just about any exam, then why do you
think CW is so hard to learn? The written exam isn't really any better
since most hams will buy rigs that work right out of the box. Why learn
all the inner workings of radios if you'll never use any of it? Because
Ham radio IS about experimenting and carrying out effective
communications. If you need to build a transmitter out of only a few parts
to get your message through, what's it going to be? That's right a CW
transmitter.

Drew, I don't think you know the first thing about this subject.
First, the HF bands are already overcrowded. Second, commercial
interests are looking at VHF and above. If occupancy is the basis
of your position, we should do everything possible to keep more hams
from gaining HF privelages. In fact, we should kick everone off HF
who can't copy Morse for a minute solid at 20-25 WPM and force them
onto the bands we're actually in danger of losing.

>> The CW barrier helps ensure that only individuals who have the

That's not what he said at all. I'm sure he meant that if you're
willing to develop the necessary operating skills, you would be
welcome on HF.

>Sorry, but the barriers are being knocked down. Now that no-code
>Techs comprise the largest class of licensees, it's only a matter of

If that happens, it will simply mean the demise of Amateur Radio.
A near-idiot could pass the current "technical" exams and CW is the
last requirement keeping us from becoming another CB.

>Either voluntarily, or by litigation. My guess is that the good 'ol
>boys will continue to resist and the issue will eventually be settled
>in the courts.

Some of those good 'ol boys don't even have HF privelages yet,
but they're just as opposed to your position as I am. Anyway,
the preceding statments show how little you know about the process.
Civil courts don't give a rat's behind about your HF privelages.
You apparently don't either, or you'd be practicing code instead
of wasting time complaining.

>I think most folks either skipped the intro or misread it.

I read it, and I still had a problem with the "conclusions" in the
survey. The problem with the conclusions is that they relate the
various arguments with the author's notion of what is correct.

>All the demographic data is just window dressing and actually could have
>been left out without affecting the purpose of the paper in any way.

Actually, all the demographic data *could* have been used to relate
the respondents to the general population.

>In truth all methods of polling are self-selected. No one is
>forced to take part in any survey. As for mine, the target audience
>was missed. I was seeking ALL U.S. amateurs. In that regard, I couldn't
>help but have a random sampling.

One more time - you don't have a random sampling. You have responses from people that elected to respond. You didn't compare the characteristics of your respondents with the general amateur population, so you can have no idea if your respondents represent even a random sampling of people based on age and license class, much less gender, income bracket, etc.

The idea of selecting respondents for a survey is to make sure your responses represent a truly random sampling of the desired target group.

>ago.

Ah. Because we are now more diverse, you propose dispensing with
hierarchy to make Usenet *more* useful? To the contrary. The more
diverse we are, the more such hierarchy is necessary.

Recall that the original "geek" hierarchy was net.* with few
3rd-level groups. As it expanded, the hierarchy was expanded too,
to accomodate the needs of a more diverse audience.

I'm proposing relaxing the standards of namespace purity, which when applied
to Usenet seems to mean that newgroups should adhere to a strict
hierarchical namespace without redundency among the subtrees, with unique
names for each node, and with the ability to use the names as database keys
for accessing specific information.

I'm not convinced that continuing to adhere to such a strict hierarchy as
Usenet expands and becomes more diverse is necessarily desirable, and I
believe that there are many different notions of *how* Usenet is useful,
which makes it difficult to talk about what makes Usenet *more* useful in an
absolute sense with respect to alternative naming schemes. More useful in
what way? As a database, as a social medium, as a base for political
action, as a forum for unheard ideas, as a collaborative agent, as a way to
distribute software?

>Usenet is now a collection of communities and cultures, and newsgroup
>names are a symbol of identity.

This is true. But does the identity come from the name, or from the
content? If people can feel attached to the names that we see today,
would not the latter explanation be more likely?

I think groups often become attached to names despite initial feelings of
inappropriateness, and some even re-appropriate them as political
expression: witness the transformation of "queer." But this doesn't make
the initial labeling less offensive or inappropriate for those to whom it
was directed.

>If you were desperate to find some obscure bit of information, would
>your first thought really be to look over a list of thousands of
>newsgroups in the hope you might find something in those silly obscure
>dotted strings that form the Usenet naming conventions? I wouldn't, I'd
>just fire up my favorite web search engine instead.

YOu assume that the organization is for the users. To some extent,
it is. But it is also for another, very important reason: to allow
administrators to carry whole blocks of related groups. Throw in
comp.* and you don't have to worry about adding apple.*, ibm.*,
compaq.*, and brand-new-computers.*

You are quite right to bring this up. It's unfortunate that newsgroup names
are so closely coupled to the conventions of Unix file systems. Ideally
newsgroup names could be arbitrary strings, part of a more general data
structure including keywords that system adminstrators and software
developers could use to maintain news feeds. I certainly appreciate the
inertia behind the current system.

>When you're planning your vacation, do you complain because you can't just
>look at a globe and figure out where you want to go based on the names of
>the countries? Of course not, you talk to your friends, you read some
>books, or you consult a travel agent.

Once upon a time we found our friends and businesses by directions,
e.g. "the sign of the boar, just past the water pump." Isn't 123
W. 23rd St. a better system? Do you object to that hierarchy?
Indeed, you might become attached even to such an address if it were
your own.

Sure, I prefer it personally. I suspect some of that has to do with my
scientific and engineering biases. Why do the Japanese address buildings
according to the order in which they were built? Why do radio amateurs like
to call obsolete equipment boatanchors? Are they out to confuse boating
enthusiasts?

I used to roundly curse Boston's perverse street layout, constantly
comparing it to the rationality of New York. But it had its charms and was
part of the character of the city, and I sometimes miss the sense of home
and familiarity (identity?) that comes from knowing the most obscure ways to
get from one part of town to another.

>Why do we look to libraries as the model by which Usenet should be
>organized? The assumption seems to be that such a hierarchical
>organization is "objective" and somehow provides information untainted
>by the perceptions and biases of the institutions doing the organizing.
>But it should be obvious to anyone following news.groups recently that
>the act of labeling cultures, placing them in relation to others in a
>strict hierarchy, is inherently a political act, with political
>consequences.

Of course it is. But nobody is seeking to be "objective". Objectivity
is the means, not the end.

I have profound reservations about whether such objectivity in means is in fact occuring. I would prefer that we abandon the pretense of objectivity when it comes to newsgroup naming decisions. Ideally it would be a non-issue with support mechanisms in place to address the technical problems involved in news propagation, and with more refined methods of searching for topics of interest.

The idea is that objectivity allows us to serve diverse interests with the most benefit and least conflict.

Well, as you say, nice in principle, doesn't always work.

One key component of this objectivity that is not often mentioned is the standard of using English names for things, despite an international audience, e.g. soc.culture.brazil vs. *.brasil.

I would think the usage of English newsgroup names is more a side effect of the dominance of the US presence in the early evolution of Usenet, the Internet, computers, and the global culture in general.

Many of the problems we have are of the variety: "bar is part of foo, therefore rec.foo.bar vs. bar is separate thus rec.bar". Since there is no practical or fair way to exclude voters from voting against a group due to such issues, the proponents do not have exclusive control over the group's naming in any event.

I believe we need to discourage namespace purity arguments as legitimate reasons for voting against a group. Constituent interest should be the primary criteria, coupled with the constraints imposed by the underlying technology. If there is enough interest to support both rec.bar and rec.foo.bar, I don't see any compelling reason to vote against either. Certainly the term "boatanchor" four levels deep into the hierarchy should be a non-issue.

In my experience and observation I often see that only reason there is a split between constituents of a potential newsgroup in the first place is that while all the constituents would actually prefer rec.foo.bar, there is a fear that rec.foo.bar will be rejected by the namespace purists of news.groups who prefer rec.foo.baz.bar. It's a shame to encourage such acrimony within a group of people who are trying to come together.

>Is it really worth the constant flamewars and bitter contention that the
>current insistence on namespace purity enflames?

Some would call me a namespace purist; generally, I don't feel bitterness over my choices. Those who do, should examine themselves.

Apparently many people do examine themselves and conclude that their bitterness is justified.

Are you kidding? Anyone who can't walk also can't pass a driver's
test without special equipment (if at all).

None of this has anything to do with ham radio, though. Resorting
to these analogies in an effort to salvage your non-existent points
is just a waste of everyone's time.

"You have grasped the kernel of the matter, Herr K."
Kafka, The Trial

Let me see if I can simplify the matter. I assert that our
brains or, more specifically, our brain cells emit electromagnetic
waves. The obvious reason for this assertion is to provide a basis
for neural radio communication; telepathy. Assuming no social bias
against it, the natural inclination would be to conduct a careful
search of the applicable spectrum for any signals of neural origin
and either prove it or disprove it; which is what I am attempting
to do.
However, in the case of social antipathy, which would only
occur if the assertion was true, what position would the world
find itself in if not the one I described? You *must* realize that
the world could progress but so far without revealing such a fact.
It could not expect to "get around it" and leave it behind like
a cyst in the body of humanity, a "black-hole" in the body of
science, or cordon it off like the "Forbidden Zone" on the
Planet of the Apes. Any attempt to do so would result in a
gradual debilitation of civlization until, ultimately, the truth
manifests itself, the degree of violence proportional to that of
which it is resisted.
And if our society should actively, willingly, and with
malice aforethought, thwart, conceal, or discourage any such
revelation, where would we be then? More importantly, who would
we be then? So, to answer your question, if it is true, your world
be guilty *regardless* of whether or not it is revealed.

Same thing here in the states. Who wants to waste a bunch of time and be forced to learn an antiquated form of communication like Morse Code when it's much easier and cheaper to talk around the world on the Internet? Not to mention having to deal with all the stuffy, arrogant old folks on HF, telling them that they don't belong on "their" frequencies and refusing to embrace modern technologies?

Self selected surveys are quite common actually. Restaurants do it by
leaving response cards on the tables or by the cashier. Large companies
will send out mailings and ask their customers how they fell about them.

And yes, radio stations will do it to.

What you seem to be missing is that these non-statistical surveys still serve
a purpose, that is what is your opinion of us.

If you look at these, you will notice that most of
them don't ask anything about who you are as a person.
>
> Any well executed survey uses a carefully selected sample of the

My population was Amateur radio operators. (period) I sent out surveys
to places where they hang out, since the above was my requirement.
Now, if I would have ONLY used packet, then I would have been
excluding the possiblility of including Novices, but I
also used other methods, providing the opportunity for them to be
included.

Look, I may not be a wizard at statistics, but I have enough sense to know
that based on the purpose of my paper, I received a random sampling.

The purpose of the paper was a study in human behavior.
How will people argue their postion on something. Will those arguments
show patterns that can be categorized. The only inaccuracy in this is that
there may be more argumentative categories than I had found. there certainly won't
be less.

1366. Budget 2m Packet

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-18 00:00:00 UTC
From: bschwart@netset.COM
Message-ID: <199605190006.UAA03828@zeus.netset.com>
Source record: 225120

In volume 96, issue 515 Stanley Schroeder asked about what was needed for a budget packet station. In my opinion, I would go with a used, inexpensive, solid state, portable or mobile radio. Myself, I'm using and have been using for many years an Icom IC2AT handheld radio with a Alinco ELH-2600 amplifier. On many occasions, I don't need the amplifier at all, but depending on propagation, sometimes it helps to have the extra umph. Of course, if you go with a mobile rig made into a base station, then there would be more than adequate power regardless of propagation. As far as the frequencies are concerned, Stanley is right, as a rule you don't usually use more than one or two packet frequencies in an area. Of course, that also depends on what you are trying to do. Here is the Columbus, Ohio area we have about 10 two meter packet frequencies in use for BBS, DX Cluster and general local use. As far as a TNC is concerned, here again I've been using for many years an MFJ-1270B unit. There are plenty of other TNC's on the market, none of which are that expensive. One thing tho when buying your radio make sure its synthesized. Its much cheaper to buy a crystal controlled radio, although they are probably not that easy to find any more but when you want to change frequencies, it costs an arm and a leg for new crystals. Hope this helps, at least its my two cents worth.

The only reason why amateur-band-only receivers and transmitters and
amateur radio topics were excluded in the rec.antiques.radio+phono
charter was to avoid any turf wars. The charter and FAQ specifically
acknowledge that general coverage receivers, many of which were bought
originally for purposes other than use in amateur radio, are included,
as is broadcast studio and transmitter technology, and there have been
several good threads in both areas.

Sorry about the attacks Bruce. There is an old saying "When you start getting the flak you know you are near the target".

I hope Jerry gets his wife on here to explain how one can obtain opinions from those who chose not to give it. How about wire-tapping or bugging? Spanish inquisition?

Another poll ran on the internet about a year ago showed the same results as your 56 person survey. This was one of those neat home page tallying setups, so everyone who participated could see the results. I think there were several hundred responses. The fact that a large majority of amateurs favor keeping the code test was again demonstrated.

Hi Jack...ooops, Hello Jack

I didn't state all the services it was reserved for, I merely stated that it was reserved for CW. It is _not_ reserved for SSB. You can have reservations at a fine restaurant but your reservation does not preclude another from getting a reservation also. It is all semantics which all to many of the discussions on all of the groups utilize to try to prove a point.

I went out and told my neighbors that the highways were reserved for
trucks. When they stopped laughing and/or shaking their heads I
granted that they were also reserved for cars and motorcycles, but not
for bikes and pedestrians. They then thanked me for shedding new light
on the subject.

Or your argument is so flawed that it's obvious to most.

> I hope Jerry gets his wife on here to explain how one can obtain opinions
> from those who chose not to give it. How about wire-tapping or bugging?
> Spanish inquisition?

I thought statistics was required material at least at the college level.
My course was taken in high school so it's a little rusty, but nonetheless,
the above question demonstrates a complete lack of knowledge about
survey methods and statistics. Self-selected populations can be shown
to rarely match the general population of any group being surveyed. This is
why no one lends any credence to those ridiculous on the air polls that
TV or radio stations perform. They say nothing about the sample but
only help boost listenership because everyone wants to see how their
opinion compared to the other self selected respondents.

Any well executed survey uses a carefully selected sample of the
population under study. The selection process is often times the
most difficult part of the survey. It requires that have some basic
understanding of the population under study or your sampling requirements
rapidly get unmanageable.

Not everyone is going to answer the survey and that needs to be taken
into consideration when calculating confidence intervals. If the number
of non-respondants is high enough, it can dilute your results to the point
of not being able to draw any conclusions. This is the basic problem with
self selection (aside from the general problem with surveys in that self
selection normally gets an abnormally high percentage of those with strong
opinions and not the middle of the road majority.) When you use
self selection, you have *no* idea how many people *didn't* respond
so you can't calculate a return rate.

> Another poll ran on the internet about a year ago showed the same results
> as your 56 person survey. This was one of those neat home page tallying
> setups, so everyone who participated could see the results. I think there
> were several hundred responses. The fact that a large majority of amateurs
> favor keeping the code test was again demonstrated.

And again it was flawed by all the same problems. Its only advantage was
that it got a higher number of responses, although still nowhere near
enough to draw any real conclusions, especially in light of again
being a self selected sample.

Learn a little statistics. This is one of those cases where even
a little knowledge helps.

Actually the dominant mode of transportation anywhere in the world is
walking. After all you have to walk to your car in order to drive
anywhere. And walking is sometimes the most reliable way of getting
around. Sure it's slow, (like CW) but you can walk over rough terrain,
steep terrain, just about anything.

Right, and it's just a matter of time before HF (the antiquated band)
becomes deserted in favor of satellite communications.

This should provide a clue. Based on years of experience actually
administering sites, sysadmins have found that the inevitable correlary
of much greater freedom in namespace is more or less useless namespace.
Sysadmins aren't control freaks, or at least not many of them are - the
existing attitudes exist because of demonstrated realities.

Tell ya what a really good product they have is. Try the hta-30 2m amp
of theirs. I am on my 5th brand new one from them. Same problem every
time I take it in. Bad Pre-Amp. It works for a while then it goes
deaf. I can hear signals better with it turned off than on. Still puts
out 30 watts of power but it doesn't do any good if I can't hear the
signals. Every time I turn it in to be fixed it comes back as
uneconomical to repair so they get one off the shelf to replace it
with.

>dependable TNCs?

Well you can set up a minimal system with a Baycom modem for around
$40 and an mfj 2m packet radio. Don't know what the price is on that
but here are some of the limitations on this setup.

1. The baycom will only work with the baycom software or software
written specifically for it. JNOS will run with a baycom but you have
to load the ax25 drivers up first which eat a lot of memory.

2. The Baycom is not a stand alone tnc. You have to leave the computer
on and running your packet program to receive mail automatically. Most
real tnc's such as the KPC-3 or Pk232 have built in mailboxes that
continue to run even without a computer.

3. The mfj data radio is a crystal controlled radio. One freq only
and if you move or travel alot then one freq is not going to do you
any good. My suggestion is to get a cheap htx-202. They work great on
packet radio up to 1200 bps.

That is all I can think of now but your best bet is to buy a real tnc
such as a kpc-3 for around $120 and a htx-202. Don't know what they go
for right now but they are the cheapest that I have seen for an ht.

Oh great. Another CB Band. That is all we need. If it wasn't enough
that cb is near 10m now they gotta be near 70cm. Don't think that the
antenna restriction is gonna do anygood. How much policing do you
think that they are gonna do to this new band if they won't even
enforce the rules on the other CB band.

Drew, Drew, Drew, what *are* we gonna do with you ??
If dead brain cells were dollar bills, you'd be a millionare.
The are no *mandatory* test for ham tickets. The radio
police *are not* going to come and drag you away from
the computer keyboard some nite and take you to a
VE exam. I'm starting to worry about you, your tape recorder
is stuck on continuous replay and your mom can't get
you out of the basement away from the computer long
enuff to get you any fresh air anymore.

So, before you get too far gone, I thought I'd do you
a favor. Other countries have different systems for
passing out ham tickets - some countries don't have
any tests, you just apply for a license and they give
you one. I have a friend over in France, and it just
so happens that he works for the Telecommunications
Bureau. I called him the other nite and told him about
you, explained your burning desire to get on HF but
since you've been in the basement typing so long
you were incapable of passing a U.S. test. He is
a very compasionate fellow, and he really felt sorry
for you, so he decided he would issue you a French
callsign so that you can get on HF with the rest of
the boys you idolize so much. Get out your pencil
and paper and write this down. Congratulations,
Drew, your new callsign is:

Foxtrot Zero Oscar Lima

and since the U.S. has a reciprocal agreement
with France, you can start using it right away. From
now on just sign your call as:

F0OL/W4

Have fun on HF Drew, you really earned it. Please
be careful not to fall off the roof while you are putting
up your new HF antennas.

Here's the best way I know of!

Clark, WB6ADC has a MFJ-249 SWR Analyzer. The nice thing about this battery operated device is that it displays your antenna's specific resonant frequency direct on a 10 digit LCD display, from 1.9MHz~170MHz! No transmitting required.

We set my Quad up on a non-conductive mast and stood clear of any structures, wires and trees. In less than five minuets we had the Quad fully optimized for the input of our repeater! The Analyzer is very reasonably priced, every club should own one!

"Your'e a bigot for not letting me on HF without code" (How so? The
rules are the same for everyone, regardless of age, sex, race, etc..)

"I can hardly wait until the old farts who remember the good old days
die off and the FCC changes the rules." (This, of course, is not bigoted?!
Hatred of older amateurs for sticking by their beliefs is simply sound
and impartial logic?)

Drew, you've already expressed your envy, jealousy, and even hatred of
the aged elsewhere (Greedy Old Geezers), because they simply have more
money (in some cases) than you do. You, like a lot of other angry
young men, are simply transfering your hate to the code/no-code issue
because you visualize anyone more than a decade or two older than you
as the enemy. Since they want code, you hate code.

The "enemy" is the change in our society in North America which prevents
even well-educated people from getting decent-paying jobs, which will
ensure the ability to buy a home, raise a family, and live the dream.
It's a whole other topic, but it isn't the fault of the old geezers
and farts. It's automation, foreign importation, corporate greed ....

I'm working on my amateur basic qualification here in Alberta and will
also obtain my morse qualification so as to access 160 and 80 metres.
If I want 7 Mhz to 30 Mhz, I'll need the 12 WPM morse qualification.
If all I wanted was VHF, I could have done this years ago. The exam
is mickey mouse. My own laziness and other leisure pursuits kept me

from practicing my morse. I'm through pissing around, though.

I've had to jump through a lot of hoops to get education, get jobs, hold jobs, and just survive. I didn't see the need for a lot of these demands, but you have to make choices. Otherwise, you do without. It might not seem fair, but that is real life.

While you were bitching, you could have had your HF priveleges.
The "Good Ol' Boys Club" didn't keep you off HF. You did.

shane

Does anyone have a QSL address for either EM1U or 9H3UP? I've heard that EM1U is a Ukranian antarctic base, and that the QSL route is via 9H3UP. Unfortunately, I can't find 9H3UP on my Call Book CD-ROM. Also, does anyone have a specific location (geographic coordinates, etc.) for EM1U?

David: We are using Internet Phone, a software package developed by the Israeli company Vocaltec. You can find their home page by doing a net search (I lost the URL). You can download a demo version for free. this allows you to make limited (time limited) calls on the system. You can then register the software (via e-mail) and the limitations are lifted.

With Internet phone you can enter into real time half duplex or (with the appropriate hardware) full duplex conversations with people world wide. The participants are divided into "topics" (like IRC channels) based on areas of interest. There are many ham radio topic groups. You simply place your call on the list of participants and soon you'll be getting I-phone calls from other hams. Or you can initiate calls. It is all very friendly and all of our good ham traditions (73, call signs etc.) seems to have carried over from the ham bands. But no QRM! No bad band conditions!

As for linking the repeaters, all you do is rig up a little VOX circuit. Take the audio out from a VHF transceiver and put it into the MIC in on your computer's soundblaster card. Take the audio out from the soundblaster card and run it into the MIC/Push to talk connections on the radio (via the VOX circuit) and you are ready to link I-phone with the VHF or UHF ham bands (or repeaters). In my case I carry my HT around with me and leave I phone running back in the shack. in this way I can work Australia Japan etc. with my 2 meter HT. I've also put my rig on a local repeater frequency and allowed distant stations to participate in local 2 meter chatter.

There is a program called repeater link that serves as a filter to prevent non-hams from accessing the bands:

http://www.onramp.net/swta/rptrlnk

This page contains more info on the whole system.

My VOX circuit is built around a 7 dollar kit from Ramsey electronics!

Good Luck! 73 Bill N2CQR/HI8

> of your respondents with the general amateur population, so you can
> have no idea if your respondents represent even a random sampling of
> people based on age and license class, much less gender, income
> bracket, etc.

Again, based on the purpose of the paper, it was irrelavent.

I'll say it again - ONE MORE TIME -

The class of license DID NOT MATTER.
The lenght of licensure DID NOT MATTER
The type of job they had DID NOT MATTER
Gender DID NOT MATTER.
Income bracket DID NOT MATTER
For or against having a morse testing requirement DID NOT MATTER
Having a strong or weak opionion DID NOT MATTER
What we term as race, DID NOT MATTER

The only, let me stess that ONLY requirement was that you be a
US amateur.(PERIOD) Therefore, I have a random sample. Everyone

who responded fit the requirement EXACTLY!

I agree, if I were targeting by ANY other method, I would have had to
have collected my data much more carefully in order to assure randomness.

Again, I'll stress, YOU CAN'T FORCE ANYONE TO TAKE PART IN A SURVEY, therefore,
to some extent, ALL surveys are self-selected. I would also like to
point out that at least one method of survey is biased from the get-go.

I'm referring to those where someone walks up to you and starts asking questions.

The pollsters have made a decision to talk to you based on their own personal
predjudices regarding your appearance.

73,

Bruce, WB4YUC

In the larger picture, absolutely.

But, have you missed the boat. These were not my arguments. You also missed the
entire point of the argument that was represented by the respondants.

The argument carefully crafted in such a way as to FORCE a given result.

>
> >Further, to optimize the bandwidth,
> >we could get down to 100Hz - and still be able to copy 20wpm,

> >I supported it where appropriate, and refuted it where appropriate.
> >
>
> No, that is not true. Some of the respondents claimed that Morse code
> was superior to all other modes.

Now your outside the bounds of the original discussion, which is on
a technical point and has NOTHING to do with the rest of the argument.

Not only did Burke agree with that
> claim, he further emphasized that this was true mathematically. When
> challenged, he claims that Morse code is superior mathematically
> because is uses a smaller bandwidth than a commercial mult-mode
> controller. The problem is that gain-bandwidth product for a system is
> but one figuire to determine over-all efficiency. To use but one factor
> is misleading.

Again, the argument was carefuully crafted to force a specific answer.
Indeed, to present one small technical aspect skews things, but this is
exactly what happened.
>
> >Efficiency is relative anyway. I can prove several ways in which

> >economically efficient?
> >
>
> The relative economies compared to the two systems was not even discussed
> in the paper.

No, it wasn't, but you apparently didn't understand that I was making a point.
In this case, I crafted an argument in such a way as to FORCE a given result.

>
> >2) Under adverse conditions, the message being sent is:

> detre**e et de se**rite en mer (SMDSM), de *er fevrier, 19**.

Yup, but now you are using a different coding scheme. French vs English.
A french cw op would probably have no problem with that, no disageement there.
>
> (My apologies for the lack of accents).
>
> An English speaking operator would be at a disadvantage because he would
> not be able to fill-in the missing letters. No such concern when a
> digital mode is used.

Wrong, If that were sent using rtty, or AMTOR, I still wouldn't understand French.....
But, the decoders would have correctly recover the information that was inputted on the
transmitting end, I don't argue that at all.
>

AHA, see, now YOU have crafted an argument that FORCES a specific result!
>
> We can go on and on with these silly little scenarios until we go blue in
> the face, it still doesn't make it any the less true that Morse code
> communciations is not as efficient as digital communciations.

They are not silly at all, all of them were carefully crafted to FORCE a specific result.
Just as the repondants did with the tehnical point they made!

> >
> >5) Add to that the fact that cw is the ONLY digital mode that can be
> >copied both by machine and by hand makes it pretty damned versitile.
> >Let's see you copy CLOVER by hand....
> >
>
> or let's see if Burke can send his picture on CW...

Not the point of the argument.......

> They are about the same now.
>
> Can CLOVER operate in a
> >net or roundtable mode??
>
> Better still, Clover, amtor, and pactor BBSs are installed and
> scanning and listening throughout the amateur allocations. This means
> that the chances of contacting a board are increased because they are
> continually scanning a number of frequencies in different bands.

But that is not inherant in the format of the mode. That capability id being derived
from another source.

> Furthermore, there is no need to wait for a net in order to pass the
> traffic, it can be passed immediately upon linking with with a BBS.
> Moreover, increasing number of the the BBSs have VHF Packet/e-mail
> gateways, further enhancing their capabilities.
>
> >Can this be a measure of efficiency??
> >
> More to the point, it is much more effective.

Again, that wasn't the point of the argument.
To answer you question, sure.
>
>
>
> >Further, if you would have

> >
>
> It was Burke who made the technical claims of the superiority of Morse
> code, not I. My contention is that he doesn't know what he is talking
> about and there is no documentation to support his assumptions.

I DID NOT MAKE THE TECHNICAL CALIMS, I REPORTED THEM AND THEY WERE CORRECT
IN METHOD USED TO CONSTRAIN THEM!
>
>
> No I am not. The published results in no way reflect the amateur
> community. I would be more please if Burke would include such a
> statement and that his contention that Morse code is superior to all
> other available modes is seemingly based on so narrow a parameter, it is
> misleading in the extreme.

If you would go back and actually READ the purpose of the paper, yes, it was.
All of the other demograpic data was window dressing, it could have all been left out
and NOT affected the purpose of the paper.
>

>
> I just did and will continue to do so.

And you continue to make incorrect statements. You have continuously reported that
the technical comments in the paper are mine, THEY ARE NOT.

You failed to see that the technical argument was clearly structured in such a way as to
FORCE a given result.

You are making arguments about statistics without understanding the
purpose of the paper.

You are making comments about the randomness of the survey with criteria
other than those which fit the purpose of the paper.

You are also assuming that I am in favor of keeping the morse code
testing requirement, when in fact, you have absolutely no idea what my
position is on that. You continue to base that assumption on the
repondants arguments.

You have so far not demonstrated any technical capability of your own, whereas
I have already mathmatecally proven the repondants argument based on
THE BOUNDARIES OF THAT ARGUMENT. Therefore, you arguments on technical terms has no
merit.

>Yes, it does, that was the very point of the argument.

One more time - there's nothing special about OOK Morse that makes it
benefit from bandwidth reduction. The same benefit applies to RTTY,
packet, you name it.

>OOK Morse at 20WPM, requires less BW than packet, rtty, and amtor,
>so it is quite relavent. Your right, using those parameters, that can't be proven
>wrong and that is no doubt why the folks who used those very parameters.

OK, OK, Let's figure out what the throughput of 20WPM code is in
characters/sec:

chars/min = WPM * 5
char/sec = (WPM*5)/60
char/sec = WPM/12

OK... so 20WPM gives 1.667CPS.

OK, now, using 5 level Baudot with 1 start/1 stop, we get:

CPS = Baud/7

and we re-arrange this to get:

Baud = CPS * 7

So, that 1.667 CPS Morse signal can be matched in throughput by an
11.7 Baud RTTY signal.

How much bandwidth does that 11.7 Baud signal require? If we build a
DSP modem and use radios with stable frequencies, we can use MSK, which
is minimum-shift FSK. The required bandwidth for an MSK 11.7 baud signal
is 18.7 Hz. So, assuming both ends don't drift, we can use a bandwidth
of 18.7Hz, which gives a system gain of 22dB over that 250Hz bandwidth
you mentioned.

What? This isn't a fair comparison? Well, you decided that CW is the
winner because of narrow-bandwidth without examining the alternatives.

Let's try to even up the comparison - that 20WPM signal actually
requires only 83.3Hz (assuming K=5, which is recommended for
fading circuits).

So, the system gain comparison is only +13dB - in favor of the
narrow shift RTTY. This is closer to apples/apples, since both
receivers need to be quite frequency stable.

>You have now won the brass ring!

Perhaps.

For reference on the bandwidth calculation, see the ARRL Radio Amateur's
Handbook.

1398. FCC Creates New CB Service (FRS) on 462 MHz Band

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-18 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <4njh0g$5dd@ralph.vnet.net>
Source record: 225185

FCC Creates New CB on 460 MHz Band

by Gary Pearce KN4AQ

The FCC has created a new Citizens Band service in the 460 MHz band. It's called the Family Radio Service (FRS), and is designed to be an unlicensed, "Very Short Distance Two-way Voice Radio Service." The FCC Report and Order creating the service was released May 15th, and will become effective sometime in June (30 days after publication if the Federal Register).

The specifics:

FRS will permit handheld operation, with 1/2 watt ERP and "rubber-duck" type antennas only, on 14 frequencies in and around the GMRS radio service at 462 MHz. The exact frequencies are listed below.

No external antennas or amplifiers will be permitted.

To avoid interference with GMRS stations, FRS radios will be required to use only 2.5 kHz deviation, half the usual narrow-band FM deviation of 5 kHz. Transmit audio frequency response is limited to 3.125 kHz.

Frequency stability is tight as well -- transmitters must not drift more than plus or minus about 500 Hz (.00025%). You'll find typical ham radios on UHF up to 1000 Hz off frequency.

Subaudible tone and other selective calling methods are permitted. Autopatch or other telephone interconnect is prohibited.

Antennas must be an integral part of the radio, and must be vertically polarized. (I suppose that means you can't hold the radio sideways while transmitting?)

FRS is an unlicensed service, and there are almost no restrictions on the content of FRS communications.

The FRS channel frequencies are:

Channel No. (MHz)

1..... 462.5625
2..... 462.5875
3..... 462.6125
4..... 462.6375
5..... 462.6625
6..... 462.6875
7..... 462.7125
8..... 467.5625

9..... 467.5875
10..... 467.6125
11..... 467.6375
12..... 467.6625
13..... 467.6875
14..... 467.7125

Complete rules and comments from the FCC can be found on the FCC's Web site, at:

The NIST program is called (by NIST) Automated Computer Time Service
(ACTS). The NIST program measures the time delay between the user
and the receiver, it then adjusts the sent time info so that the
received time is accurate to about 1/10 second.

Has anyone checked the accuracy of the time received from Tardis
program? I would be interested in how the transit time through the
Internet is determined.

The NIST program is (or was) available from NIST. I have a phone
number of 301 975 6776

1402. Station grounding procedures

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-18 00:00:00 UTC
From: Karl Oyster <koyster@infi.net>
Message-ID: <4nl9rp$ac7@nw101.infi.net>
Source record: 225189

I have a problem, sort of, that I'd like a little help with.
I'll be most appreciative of any ideas that anyone has about
this situation.

I'm getting ready to start construction of a new home, and plan
to have a large (>500sqft) shack to put together a multi-multi
contest station. The shack will be in the basement.

I plan to put in five 8'X5/8" copper-clad steel ground rods just
outside the edge of the footer for the house. The rods will be
connected to the actual ground wires, which will be run directly
into the basement by laying the wires themselves across the runs of
concrete block, as the block is laid. Thus, short ground wires,
no water leaks, no need to knock holes in the new wall. But here'
the problem:

I have two choices of 2gauge cable, which is the largest available:
bare, solid copper, and insulated, multi-strand. I'm trying to figure
out whether it really makes a difference which of these I use.

The bare copper will most certainly corrode fairly quickly, which
will increase the resistance to RF flow on the outside of the large
conductor. On the other hand, the multi-stranded but insulated will
have a higher resistance to begin with, but it should stay almost
totally uncorroded. (The connection will be completely sealed with
RTV, regardless of which cable I use, and the bottom two to three
feet of the ground rod will be in the water table, so the ground
resistance itself is of no real concern -- it'll be very minimal.)

Any ideas or thoughts about which is better? Or, perhaps whether
it will make any difference either way? I'm probably making a
mountain out of a molehill, but I have a habit of not planning all
that well, and this is one case where I definitely have to get it
right the first time, because the ground rods will be about eight
feet under ground by the time everything is completed.

As I said, I'll be quite appreciative of folks' opinions or ideas
about this. In case anybody else out there is as obsessive-com-
pulsive as I am, I'll summarize and post the results if anybody's
interested.

Thanks for reading, and, I hope, for giving me your ideas.

>is childish. The only appropriate name for this proposed group is
>"boatanchors." Group-advice IS an outsider, in the sense that only hams
>will use this proposed newsgroup.
>
I think that this notion that "only hams will used this proposed
newsgroup" is far-fetched unless the charter specifically excludes
non-hams from participation. This would be a major change from the
present mail list, which welcomes non-hams who have something to
contribute or an interest in the topics discussed.

I think if there is any "dog in the manger" attitude here it is coming
across loud and clear as "non-hams get lost," even for those of us who
are active participants in the existing structures.

It is more than high time that a draft charter for this group be posted,
even if it has be be an informal posting to news.groups,
rec.radio.amateur.misc, and not news.announce.newgroups----this debate
has gone on for some time over a newsgroup whose basic purpose on Usenet
is an unknown.

If I had to make an estimate from what I've seen over the name, I'd
guess that the draft charter is going to make non-hams unwelcome in the
group.

>existing attitudes exist because of demonstrated realities.

The reason many alt groups don't do well is because of _several_ problems.
You cannot easily separate out the namespace part and claim that alt groups
are rejected by sysadmins due to namespace problems.

Offhand I would guess that most sites which don't carry alt won't carry it
because of the frivolous topics in alt groups rather because of names.

Another problem with alt is its many joke groups. Of course, a joke group is
likely misplaced in any sort of coherent namespace, but that's not its _only_
problem; a joke group is useless because it is not a forum for discussion.
The voting process, even without namespace purism, will still prevent joke
groups in the big 8 simply because nobody will vote for them (since nobody
wants to use them).

Newsgroups need to have two names: an internal name, for use only by software,
and an external name/description by which most people access the group.
(Recently AOL was roundly flamed for doing this with "For your newsgroups
file" lines in the latter niche, but it's not a bad idea in principle.)

FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 MAY AND FORECAST FOR 19 MAY - 21 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 17 May
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: 7.4E+06 (normal)
X-ray background: A1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 May 20 May 21 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 17 May
Learmonth 5 3221 1111
Fredericksburg 6 11
Planetary 10 12

Observed Kp for 17 May: 3334 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
19 May 10 Quiet to unsettled
20 May 16 Unsettled to active
21 May 15 Unsettled to active
COMMENT: Unsettled to active conditions are expected 20-21 May
due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
18 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
19 May Normal Normal Fair
20 May Normal Fair Poor
21 May Normal Normal Fair
COMMENT: HF conditions are expeted to remain fair-good until
20 May. Degraded conditions expected at times for mid-high latitudes
for interval 20-21 May.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
18 May 3

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
19 May 10 near predicted monthly values
20 May 10 near predicted monthly values
21 May 0 depressed 10 to 20%/near predicted monthly values
COMMENT: Degraded HF conditions may be experienced for southern
region during interval 20-21 May. Depressions may be experienced
on 21 May for southern region only.

Getting their products is the snag. Don't
even think about trying to get model 309 suppressors out of them. After a
six week hair pulling exercise the head of ICE told the distributor I
went through (who was forced to bug the heck out of him) "That's it,
you're getting the last three 309s, period!". I was eventually forced to
take 309H models with their much higher ignition voltage. The story I was
given is that their commercial (i.e. non-ham) business has put extreme
pressure on their ability to manufacture the amateur gear. The distributor
confided that they are reviewing ICE as a supplier.

It saddens me to write this, but folks should know that there's been a drastic
change with this vendor during the past year.

Regards,
Pete

I hope this is the correct forum to post this question. I have a FT-736 and would like to obtain any software that allows computer control of the FT-736. I do remember seeing a program once but have been unable to find it again. A program for Dos, Windows 3.1 or for OS/2 would work. I would especially like to see a program that is either in basic or in C with source code. I want to set up radio to computer connection, use the software to verify I am connected correctly, and to see an example of how someone utilizes the CAT commands. Then, I would look at writing my own program in C (probably for Dos and OS/2 text mode). Any help would be appreciated.

Damn straight, Jack!

With no "skip", smaller antennas, more expensive amps and FM only,
The classic CB moron will go from:

110% garbage overmodulation
200 very dirty watts
B/S antenna ideas
Echo mikes

To somthing a lot closer to what ham radio is today. I expect to see a lot of beam projects. So 11 meters is gone. Wasted. Ka-Ka. We should forget it and enjoy the bands we still have. We should also thank our stars that the FCC didn't take the bottom half of the 70cm band and give it to them!

Hi Bob,
Actually, it's probably pkarn@qualcom.com without the double 'LL'. From long ago, I think his copyright was intended to prohibit the use of his source in commercial software packages, although it may be used in applications that are given away. But I'd sure check with him before proceding. If its got a copyright notice, then he claims ownership to control the right of copying and he deserves it for all the work he did.

Ben
The ARRL does answear it's e-mail. I am planing on taking a vacation in
the Caribbean this yearand want to bring a 2m rig with me. I sent an e-mail to
the regulatory branch at the ARRL with the exact countries I plan to vist.
Within a week I had an envelope in the mailbox with all the forms needed for
these countries to get a temporary liscense. Be sure to include your street
address when you e-mail them. By the way I needed forms from 6 different
countries. I got better results from the ARRL than I got calling some of the
countries Embassies and Consulats. But a quick e-mail from the ARRL saying they
are working on your question would be a nice touch. I got no e-mail response
just the requested information.

Perhaps someone interested in providing emergency capability, good
operating ability and/or spreading international goodwill would be
interested in amateur radio. Have a look at Part 97.1 - you'll see that
amateur radio is supposed to include these things, too.

I personally get a kick out of technical stuff myself, but I've
come to grips with the simple fact that technical interest and
Morse code are only two facets of a broadly defined service.

What I have yet to see in Part 97.1 is a desire for pure elitism,
though it certainly appears to be present, too.

Are YOU kidding? Better check your callsign database before jumping to such rash conclusions...believe it or not, I actually do hold a "coded" license.

Of course, that totally flys in the face of the erroneous assumptions of you old folks that anyone who DARES to oppose mandatory CW testing and is in favor of abolishing the tests has simply GOT to be one of those awful, horrible, lazy, responsible-for-everything-that's-wrong-with-ham-radio-today no-coders, right?

Reality check: It simply ain't so.

Wrong target again, Drew. I've never complained about not being
able to use 11 meters; it was reallocated before I was even a ham.
It's just a good reminder of the waste that results when government
gives people something for nothing.

Speaking of something for nothing, you're obviously in that category.
How do you reconcile the similarity between your position and the
people on Socialist Security that you're always complaining about?
They're certainly entitled to more than you are.

Those purposes can be accomplished on VHF and above, without the need to learn code or complain about it. Morse might still be required in a truly dire emergency, but the decision to learn it will rest with the operator's willingness to improve his skills.

Incidentally, work like this can also be pursued without the need to obtain a ham license. Volunteer fire companies, the Red Cross and many other organizations are always looking for good people.

>and/or spreading international goodwill would be interested in
>amateur radio.

Like Drew said, this can be accomplished on the Internet.

>Have a look at Part 97.1 - you'll see that amateur radio is
>supposed to include these things, too.

Nowhere does Part 97 say that those pursuits alone are ample justification for occupancy of the Amateur spectrum. It also doesn't say that the intent of the F.C.C. is met if Drew has an emergency radio system (emergency capability) but only Dana knows how to use it (good operating ability). Pursuing one goal does not exempt an Amateur from the other purposes of the service.

>I personally get a kick out of technical stuff myself, but I've
>come to grips with the simple fact that technical interest and
>Morse code are only two facets of a broadly defined service.

Dana, some people are of no use to this service no matter how broadly you define it. They just want a free ride. No, I stand by my previous statement. Even relatively uninformed people know this is a technical service and that Morse proficiency is an integral part of the licensing process.

BTW, you still haven't answered my previous question. What is it that you believe would be accomplished by elimination of the Morse requirement for HF radiotelephone privelages?

73,
Jack WB3U

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 MAY AND FORECAST FOR 20 MAY - 22 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 18 May
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: 1.1E+07 (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 May 21 May 22 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 18 May
Learmonth 6 2122 2122
Fredericksburg 8 4
Planetary 10 4

Observed Kp for 18 May: 1200 1211

2B. MAGNETIC FORECAST
Date Ap Conditions
20 May 16 Unsettled to active
21 May 15 Unsettled to active
22 May 10 Quiet to unsettled
COMMENT: Unsettled to active conditions are expected 20-21 May
due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
19 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
20 May Normal Fair Fair-poor
21 May Normal Fair Fair-poor
22 May Normal Normal Normal
COMMENT: Degraded conditions expected at times for mid-high latitudes
for interval 20-21 May.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
19 May 13

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
20 May 10 near predicted monthly values
21 May 0 depressed 10 to 20%/near predicted monthly values
22 May 10 near predicted monthly values
COMMENT: Spread F observed during local night hours. Degraded
HF conditions may be experienced for southern region during interval
20-21 May. Depressions may be experienced on 21 May for southern
region only.

What I'm not interested in is stuffy old folks like you who believe that nobody should have access to their little "private club" called "amateur radio" unless they demonstrate knowledge of an outdated, ancient mode of communications known as Morse Code. I'm not interested in radio? Uh, okay....I guess that's why I have chosen commercial radio as a career and been in the business for the past 12+ years. Whatever.

Here is info about Fertik's in Philadelphia. It is from Leon Fertik's business card. Note, I suspect that the telephone number listed is his home number.

1(215)455-2121
5400 Ella Street
Phila, Pa 19120

Thur 7p-9p
Sat 9a - 3p

From Skuylkill Expressway, take US 1 North Bound. When the highway turns into a regular road, make a left turn at Rising Sun avenue. Take Rising Sun Avenue past the fire company and make an immediate left. This will get you onto Summerville. Go to the end of Sumerville. This is Ella St. You should see the warehouse a little on the right.

The directions are from the picture on the back of the business card.

My info is about 2 years old but I have confirmation that Mr. Fertik is still in business from another netter.

1445. Pending ve7tcp.ampr.org network outage

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-19 00:00:00 UTC
From: lyndon@ve7tcp.ampr.org
Message-ID: <4noh3b$lg8@ve7tcp.ampr.org>
Source record: 225082

[This is a copy of a message sent to all ve7tcp.ampr.org mailing
list subscribers.]

Our new T1 link has arrived -- a week earlier than we expected!

That was the *good* news ... :-)

Moving to the new link will require us to make some major changes to
our network. (Our == my ISP. I handle their network engineering.) The
T1 link is provided by a different network carrier, therefore switching
over requires that we renumber all the existing networks (and everything
connected to them). While we just went through this process with the
ve7tcp.ampr.org server a couple of weeks ago fairly painlessly, I don't
expect this one to go quite as smoothly, and it's quite possible that
the server will be unreachable for a couple of days.

Our current schedule has the cutover taking place this coming Wednesday.
This is not a firm date since the move is predicated on our new carrier
getting the network routing configured properly. We might bump it to
Thursday.

Once the server disappears it will be gone for at least four hours, and
possibly longer. During this time, please do NOT send "test" messages
to any of the mailing lists. I will send out an announcement when
everything is once again up and running.

When the system comes back you might find that you cannot connect to
it (via telnet, FTP, or the Web). This is due to an artifact of the
way the Internet domain name servers work. It will take up to a week
for the old nameserver information to expire. During that time your
system might not see the server's new Internet IP address, and instead
try connecting to the old address (which will no longer work). If that
happens you should contact your *local* system administrator and ask
them to reload the nameserver cache. This should flush the old data
out.

Incoming e-mail will not be effected by this change. While the server
is down it's incoming mail will be forwarded automatically to one of
several alternate hosts that will know how to reach the server at it's
new address. Again: don't send "test" messages to the lists.

If, after Wednesday, you want to check your Internet connectivity to
the new address, you can use the "ping" and "traceroute" utilities
provided on most UNIX systems. (If you run Windows, you're on your own :-)
The "finger" service will also be running almost immediately (most PeeCees
have a finger client). If you find that you cannot connect, check the
IP address you are trying to connect to. If it reports 206.12.240.9

you're trying to get to the old address, and should flush your nameserver cache as described above. (I don't know yet what the new IP address will be. If your system supports the 'nslookup', 'dig', or 'host' commands, you can use those to query the nameservers for the new address.)

Finally, if we run into any *major* problems that will keep the server down for more than a day, I will post an announcement to the rec.radio.amateur.misc newsgroup.

--lyndon (looking forward to a QRO Internet connection!)

What is incredible is that if you were empowered by the Texas
Dept. of Public Safety, you would deny my father a driver's
license for an automobile because he is incapable of passing
a motorcycle test. He's glad you're not in charge.

>>When are all you normally-blessed people going to stop repeating the lie
>>that "Anyone can learn to ride a motorcycle or do CW"?

IMO, That's not a sufficient reason for continued lies and myths.

How do you like my idea of awarding amateur radio licenses only
to individuals with EE degrees who can pass the MENSA entrance
IQ exam? That's a higher common denominator so you should
like it.

Hey,

I recently got an FT-530 myself, and was able to do the mod easily. As it turns out, if you purchased the radio recently, there will be a green wire on the board, I don't remember which jumper it is but it doesn't matter, it's the only wire on there and it's just a small loop. Cut it. Reset your CPU, and you should be golden. And yes, 800 RX does work.

Enjoy,

Well, for rec.radio.boatanchors, probably nothing, as collecting
old radios is not necessarily limited to hams. However, the original
proposal has it as rec.radio.amateur.boatanchors. The *larger* issue
seems to be contention over the "boatanchors" term, as opposed to
"antique" or other generic terms.

There has been a similar argument over the need to create rec.radio.
amateur.swap, as hams don't always look outside of the
rec.radio.amateur.* hierarchy for rec.radio.swap, and continue to post
"for sale" ads in .misc and other groups in rec.radio.amateur.*.

Are YOU kidding? Tell that to the thousands of disabled individuals in this country who have lost one or more of their legs, and yet hold valid driver's licenses which allow them to operate a motor vehicle like everybody else. Only difference is that their vehicles are specially-equipped with hand controls and, most often, with wheelchair lifts as well.

I think that "outsiders" refers to those who probably will never read the proposed newsgroup; i.e. those like group-advice that just want to argue for a name other than "boatanchors." As someone has already suggested, perhaps rec.radio.boatanchors would have been a better choice.

Hank, I agree that it's time that the draft charter be put forward. I keep looking for it daily in news.groups, and am not sure what the delay may be.

I disagree, however, that this group would exclude non-hams. Part of the problem with the newsgroup creation process is that you have those out there who would vote against the new group, and encourage others to do so, yet they probably have no intention of ever using the proposed newsgroup. When creating a new group, there's usually enough internal strife and votes against from within the group itself, without having those with no vested interest in the group doing so.

WAH? Clever writing, that.

Any radio service that culls out the casual communicators from the amateur ranks will be healty for amateur radio. When amateur radio is no longer the only game in town for those people then they can persue their own interests without diluting the basis and purpose of the amateur service. Give them all the spectrum they need (a couple of unused TV channels should do nicely).

(Regarding the licensing requirements, they should at least have had to assemble a superregen out of WW2-surplus pulse-modulator components. Opportunity missed, says I...)

this was posted May 13 (GMT). Could this get posted a week befor hand?
More people might get to read it on time then. Not every one can check
everything twice a day (some are lucky).
Thanks, N6XQF.

Karl,
Congratulations on the new house... and the chance to do it right the first time.
The ideas you posted are well and good but may be of dubious value especially when your concerned with the eventual corrosion of the conductors.
You might be well advised to call POLY-PHASER and get their catalog and input . The people know their stuff.. and the products are TOP QUALITY.
No this is not a paid plug for POLY-PHASER... but I do have my tower and installation protected with their gear.
The other company is I.C.E. also Top notch equipment.
And a plus... both companies catalogs..are FREE

POLY-PHASER Co.
PO BOX 9000
Minden, NV 89423-9000
702.782.2511 800.325.7170

I.C.E.
PO BOX 18495
INDIANAPOLIS, IN 46218-0495
317.545.5412 800.ICE.COMM

Remember... do it right the first time... and quality is remembered long after price is forgotten..... 73 and BEST DX

Yes, but time won't stop for you in the meantime either.
When I'm just entering my 80s, you'll be entering your 60s
and all grown up. You probably won't be worrying much about
code at that time. You'll probably still be pissed that I
just spent your social security payments.

Well, I *think* you're still referring to the "Morse code gives minimum
bandwidth" argument, and you're claiming that this argument is compelling
given some arbitrary boundaries (in fact, you're starting to become
a little insulting to people that refuse to simply agree). Well,
imagine this - the minimum bandwidth any signal can occupy is none
at all, which is achieved by not modulating a carrier. So, the
really compelling argument here is that *no modulation at all* is
the best modulation mode because it reduces the bandwidth to
0, giving infinite system gain in comparison to anything else at
all.

Can't you see that this argument is simply ridiculous, proves nothing
useful, and isn't worth supporting? Your continued efforts to drive
home the "truth" of the argument doesn't change the fact that the
argument is useless.

It's great - buy one

"A shack in a box"

Audio is a bit iffy but its a savage 100w o/p on 6 and gives a good account with 10 on 2. I'm only VHF approved so haven't used the HF side in anger but its a damn good Rx apart from tinny audio but an extensipn speaker does help.

All i use is a 2/70 colinear, 6m vertical 1/4 wave and G5RV for HF Rx

Buy one!!

Very well, but this does not help much to optimize the antenna.
The primary concern in an optimization is to get a good radiation
pattern for the material you invest in the antenna. Of course
a good SWR is also needed, but there are many ways to get there.

Hi Brian,

Since antenna software has widely become available, VHF and UHF
Yagis have been optimized considerably. Also the NEC-2 based codes
(e.g. EZNEC) allow to determine the radiation pattern of a VHF or UHF
antenna about as accurate as professional measurements.

This will also be the best way to optimize quads, I am sure someone
has done it.

I live in an apartment with a no outside antenna rule. When I got a new rig a few month ago, I got a tuner to let me load tha longest wire I could install, about 42 feet. With that and a 100 Watt transceiver, I have worked over half way to a DXCC from Michigan. This has included the South Orkney Islends, Nauru, Western Kiribati, Mauritius, Ascension Island, and Franz Joseph Land, along with New Zealand and Austrailia.

Surely it goes without saying, or it should, that nearly all of this was on CW. Given our current propagation, it was mosstly on 40 meters, where my antenna is 1/3 wavelength long and 1/6 wavelength above ground. Not even a serious attempt!

It doesn't matter that CB is near 10M. The injustice is that 11M
was taken from the Amateur service and turned into a wasteland.

>Don't think that the antenna restriction is gonna do anygood.
>How much policing do you think that they are gonna do to this new
>band if they won't even enforce the rules on the other CB band.

There's not much incentive to violate the rules governing ERP given
the propagation characteristics on those frequencies. This is
where CB should have been all along.

ATTENTION:

The poster of this message, Edwin "Jed" Barton (N1JBC), is a notorious
jammer/repeater hacker in Rhode Island. He has been legally banned from
several machines in the Southeastern New England area. Exploits of
his career are available upon request, but have also appeared in
the Amateur Radio Newsline posted to this newsgroup.

DO NOT provide him with any information regarding the internal
operations of repeater systems. He *WILL* use that information in an
attempt to hack into area repeater systems that have remote control
operator input capabilities. He has used knowledge, such as vendor-
default feature codes, to hack into repeater controllers in the past.

Rest assured that ANY information you provide to him will *NOT* be
used to "help" him, but will instead *HURT* us, the repeater owners
and operators in Southern New England.

CABOT 500 SPECIAL CALLSIGNS ISSUED

In commemoration of the 500th anniversary of John Cabot's voyage to North America, the Society of Newfoundland Radio Amateurs will be operating the station VO500JC from the Cabot Tower in St. John's, NF from Jan 1, 1997 until Dec 31, 1997. This station site is located at the VO1AA site where Guglielmo Marconi received the first trans-Atlantic wireless signal in 1901.

We are now in the planning stages for various special events throughout the year but we hope to have the station operational as much as possible in order to allow everyone an opportunity to make contact with us. We also encourage any Amateur travelling to Newfoundland for business, a holiday or the Cabot celebration to visit our station and make a few contacts from this historic site.

Two other station callsigns have been granted for the 1997 celebration; CY1JCD at Bonavista, the site of Cabot's landfall, to be operated as a joint venture between ARCON and QSARC, and CY2JCD at a yet to be released site in Labrador, operated jointly by HOWL and GBARS.

As events are added to the operation schedule, future notices will be issued.

73 and CU on the bands.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 MAY AND FORECAST FOR 21 MAY - 23 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 19 May
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.1E+07 (normal)
X-ray background: A2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 May 22 May 23 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 May: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 19 May
Learmonth 8 3222 3211
Fredericksburg 8 7
Planetary 9 5

Observed Kp for 19 May: 1022 1232

2B. MAGNETIC FORECAST
Date Ap Conditions
21 May 13 Unsettled
22 May 10 Unsettled
23 May 10 Quiet to unsettled
COMMENT: Active periods did not eventuate. Unsettled conditions
now expected for next two days.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
20 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
21 May Normal Normal Fair
22 May Normal Normal Fair
23 May Normal Normal Fair
COMMENT: Degraded HF conditions are now not expected for mid-high
latitudes.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
20 May 10

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
21 May 10 near predicted monthly values
22 May 10 near predicted monthly values
23 May 10 near predicted monthly values
COMMENT: Spread F observed during local night hours. Forecast
mild depressions for southern region now not expected.

Try re-reading some of your other posts.

BTW, since I have seen posts from two long time foreign Hams (a GB and a JA), neither of which had ever heard of the name 'boatanchor' before. I don't think it looks very good for this idea. If you were the type to follow advice, I'd change to something else.

Horse poop. Being laid off does not equate to being unemployed. Open any Canadian newspaper and you'll see hundreds of jobs being advertised for that locale. When you and your family are hungry it shouldn't matter that you have to take on a job out of your field. Take classes at night to gain training in a new area. Sounds silly, but "Where there's a will there's a way." If one has no will, then let them perish.

>>was a big waste of my time. I would much rather spent the time
>>learning electronic RF theory than learning an obselete technology.

I agree its a totally outdated technology but then Ham radio has
become an outdated hobby itself.

Ask yourselves why there are no young people interested in ham radio.

Who wants to spend hours learning CW so you can talk to a bunch of
old farts who's conversation skills end at the weather. Most young
people would rather use the Internet which offers new technology
and challenges and is progressive - something ham radio has not been
since about 1920. (with the exception of the goodwork done by a
minority of Hams in digital modes - AX25 etc).

Its a sad reality that ham radio is controlled by its ageing membership
who are clinging on to their past and are paranoid about change.
In 10 years ham radio will be of historic interest only with no
spectrum as this will be taken over by more pressing commercial
needs.

And yes I am a ham and I have no intention of wasting valuable
brain space with CW, I would rather learn another programming
langauge.

Just my views....

Regards...

"CK's Ode to Dah Code"

We' ve all heard the cry "abandon the code!,
it's useless outdated, NOT a mod-er-n mode!"
So I said to myself,"could codes' day really be over?
Best left for SKs' fer-til-iz-n' the clover?"

So off went my paddle 'n keyer to a museum,
so those curious of our "past" could drop in an' see um.
I then bought a computer and a box I was told...
would update my station,using all hi-tech modes.

It then was set up,all by my own hand...
the screen it lit up et voil&#65533; Heard Is-land!
I switched to transmit to" talk with this gent"
but my screen read "sorry, can't copy 100%!"

"There's static,interference if you could hear it you'd agree...
if it ain't armchair copy we machines cry c'est la vie!"
It then said "there is as YOU know a way to get through,
it's called the code,and what luck for you!"

"You've learned this art,you "stuck it out"
'tis a valuable tool,there isn't a doubt."
"You' ve invested your time,and besides the code you did learn,
possession of valuable skills must be... EARNED!"

So I say to you now don't get fooled when some say...
"Codes an' old dinosaur fadin' away!"
It's part of our past,present and future existence...
anti-coders prepare for "beaucoup de resistence"

Hi Dave ...

DOS 6.22 should work just fine, and you may even get a perfomance increase
by double-spacing the drive. Good luck, and backup any data first!

Thanx,

Scott

One wont get any "preformance increase" by double/drive spacing...it WILL
slow down access time, no matter what the drive, but it will be even more
noticable on a slower drive.

The only advantage of course is space...about 42% increase on the average.
Everything else is comprimised...speed, processing, and hard drive "seek"
time on all programs.

Hi Drew, did you really provide one minute solid copy, or did you take
the multiple choice version of the code test? If the former, then
you can honestly say that your code speed meets the requirements of the
license you hold (which just verifies my belief that anyone with normal
faculties can learn the code). If the latter, then consider your license a
gift from this era of weakened requirements.

>Of course, that totally flys in the face of the erroneous assumptions of

Nope. Gary, Dana, and others who are coded are in favor of further reduction
of licensing requirements.

Gee, a lot of the phone system is underground here. so's a bunch of the power systems. telco central offices still powered by batteries, i'm told. if push comes to shove, they'd probably make connections via satellite using a "portable 4-wire".

>The only thing left is the HF Xver, mike and if there is no propagation...

golly, that sure is nice to know...if i was a manufacturer, i would have made sure that the stuff i planned to sell a ton of at least had traditional markups (where price is 4x to 8x cost of parts..) and relatively low overhead instead of the VHF range with higher cost manufacturing and more complex equipment du jour. (that there's a radio of the month sort of implies that there may be a day when the maker finally has to make a return on that investment...).

there's not much profit in a $250 HT.

and i don't recall the manufacturers having much say in the code free license proceedings..they didn't think it would go given the lackluster performance of "novice enhancement".

I passed both ways. Answered 9/10 of the multiple-choice questions
correctly, but also had a couple of "strings" of solid one-minute copy.

Either way, what valuable advantage in life did I gain from learning this
antiquated skill? I have not used it since and never will again. Just a
hazing requirement of a bygone era, that's all.

Socialist Security (hey, I like that one!) is redistribution of wealth,
pure and simple. As ridiculous as the code requirements are in this day
and age, at least they don't take money out of my pocket. I fail to see
the similarity.

Better get out that 'ol bandplan sheet again, Jack. Last time I checked,
10-meters from 28.3-28.5 was most definitely an "HF 'phone" band.

Or don't us Tech-Plus guys count either, 'cause we only have 5WPM? Are
we also not "real hams", like the no-coders?

Show a little intelligence for once and read between the lines, Chris.
Of course I answered the question...because I AM interested in radio!
Duh! Isn't that why we all got our tickets?

>
>>I'm not interested in radio? Uh,
>>okay....
>
>Obviously not...you choose to attack and bash your fellow operators

Nope. Just the ignorant ones like Christopher Greenhalgh.

> for no apparent reason, except that youre jealous of not knowing code
at the >general level or above.

That's right, Chris. You got me all figured out. You've hit it. I'm
jealous that I don't know Morse Code at better than 5WPM. Gee, if only I
had spent all those hours pounding out noises on a brass key instead of
sitting behind a computer. What a technologically-advanced,
sophisticated, truly supreme human being I would be for my vast code

knowledge and abilities!

> If you would spend HALF as much time learning the code, than
>you do posting drivel and attacking those who DO know it, with lies and

>childish remmarks, you would have had an Extra class license by now.

I guess it's just a matter of priorities, Chris. Morse Code is not high on my list of lifetime goals, achievements, and accomplishments. I tend to go for the things that have a practical use and purpose, you know? Silly me, I guess.

>>I guess that's why I have chosen commercial radio as a career and

>
>Working in "commercial" radio as a career, has absolutly NOTHING to do
>with Amateur radio, except unless you were the station technician.

Again, use those brain cells for a change and realize how stupid that last statement was. It has EVERYTHING to do with amateur radio in the context that it was written...which was to say that it obviously shows I have an interest in radio! Did you leave your thinking cap at home today, Chris? You're really not doing well, even when measured against your own usual mediocre standards.

Hi,

I'm investigating the detection of high voltage arcs in RF coaxial lines and vacuum capacitors
that we use in our multi-megawatt RF facility here at JET. The aim is to improve the various
protection system in use on the plant.

I've heard of a reference to work done by Collins Radio during the 1960s where they were detecting vacuum capacitors arcs in high power MF/HF broadcast transmitters by using a 300kHz resonant coil system and listening to the 'splat'!

Does anyone, particularly Stateside, have any more information or recollection on this technique?

Many thanks...Andy Sibley

> michael long kf4crt

Well I am more than pleased with my FT-50R. I found that since getting
it I use it a heck of alot more than my Motorola HT's.

It does have some things I don't care for. The LCD display and its
backlighting.

From what I see most of the "alledged" problems seem to be from those
who want to use it to listen to the broadcast band FM stations. Yaesu
didn't put the right filter in it to satisfy those folks. Hint to fix this
problem...GET a Walkman or a portable am/fm radio.

The RX is very good and tight. RX audio EXCELLENT! TX audio EXCELLENT!
Battery life is great.

I am very pleased.

The only thing I can think of is to inquire of one of the several callbook services on Internet for the call you want, or try all that would be acceptable. As I understand it, though, the present vanity call arrangements only cover specific calls you or your relatives have held in the past. For instance, I could presumably pay $30 to get any of W8UKI, W3LXS, W3UKI or K3EL!

Are YOU kidding? You are obviously not aware of the thousands of
physically challenged hams that could get a code waiver, yet opt for,
and pass the CW requirement. Before you bring physically challenged
individuals into your lame arguments, you may want to contact the
folks at Handi Hams in Golden Valley, MN. They could really open your
eyes (although your mind will still be in question).

I have been buying these broken amps at the Tandy surplus store.
It's very easy to fix them. ($2.89 for a RF transistor) and then I
fix the original problem which is the cheap diodes in the RF relay
don't furnish enough current to switch the relay fast enough - so
the RF preamp eventually burns out. Thanks all you guys for giving
me a source for some real cheap 2 meter amps.

--Well, if you're going to blame it on the proliferation of welfare,
unwed mothers, declining nuclear family, Republican Manifesto...
that is crap.

People do want to work, and to spend money to oil the sprockets of
capitalism and free enterprise. The jobs just are not there. In
Canada, REAL estimates place unemployment at +20%.

It really isn't any wonder that the youth of North America are so
seething with repressed anger. With a bleak future for many, it
also explains the increase in juvenile violence.

Automation, foreign imports, and corporate greed are influencing and
increasing unemployment to record levels. All of these have increased
dramatically in the last 15 years or so. Automation is inevitable,
importation is debatable, but corporate greed with government complicity
in both of our nations is an evil, destructive choice being made, to
the intense detriment of the standard of living of ordinary people.

You're wrong about these things reflecting "Pinko" sympathies, but you
could very well be right about a revolution. (No sedition being
implied here. Just an observation based on present events.)

(Maybe that's why the Canadian Government just imposed draconian gun laws
guaranteed to end private ownership here by century end.)

(way off topic, I know, but important, I believe....

Could you imagine it? Drew, Chris, and Burt together in one place, allowed to just battle it out in a grudge match to the death? Chris and Drew fighting with one another, Burt telling them all the while why they're so unbeliavably boring amateurs...

To all of you who see fit to have your fights in public, thanks for being so considerate of everyone else in the world. Your spiteful and usualy meanigless posts are an embarassment to the amateur community. May the rest of your psyches not be so terribly troubled.

How ugly or beautiful would this be to watch? OH YEAH, we can watch it now...

When I was still operating a two-way radio business I held
KA2XAX in the Experimental Radio Service in order to
demonstrate radio equipment and perform field surveys on
broadcast remote pickup frequencies.
I also held KNIT516 which allowed for operation on any FCC Part
90 frequencies for the same purpose.

Sounds pretty much like an expanded GMRS service. For years the
GMRS frequencies could be used for business or personal radio
communications. The FCC then decided to get businesses off and
move them to other FCC Part 90 commercial frequencies.

GMRS is now a Family Radio Service....

It's a two-edged sword. If we post them more than 3 days in advance (it was May 12 PDT), they get expired by most local sites and people forget to save the article.

If you're interested in attending WVARA meetings, remember they're on the 3rd Wednesday of each month. During the Summer months (June, July, August) we'll meet at the Children's Discovery Museum auditorium in Downtown San Jose. In September we'll return to the regular meeting location at the Cambrian School District Offices in South San Jose.

Visitors are welcome. Of course, we hope you'll like the WVARA and decide to join.

I am in need of the programming board for the Motorola Micom-s HF-SSB radio.
This is the pc board that can be mounted inside the radio to program the channel information. Once the radio was programmed the board could be removed vrom the radio.
This radio was sold under the name Micom-s or Triton-s, bother were almost identical.
I might be interested in purchasing other parts for this series of radios, including the T-1959 automatic tuner.

Interestingly enough, I know a great many amateurs that assisted
the Red Cross during the Northridge quake situation. They used
amateur radio, and they didn't use Morse code ;-).

>>and/or spreading international goodwill would be interested in
>>amateur radio.
>
>Like Drew said, this can be accomplished on the Internet.

So, the amateur rules need to be re-written to eliminate at least
two reasons for the existance of the service? Really?

>>Have a look at Part 97.1 - you'll see that amateur radio is
>>supposed to include these things, too.
>
>Nowhere does Part 97 say that those pursuits alone are ample

>knows how to use it (good operating ability). Pursuing one goal
>does not exempt an Amateur from the other purposes of the service.

Be very, very careful, Jack; you're standing on shaky ground. The
rules don't require that every amateur pursue every purpose of the
service. The rules say "here are the kinds of things this service
is intended to do", and it is certainly consistent with these rules
for each individual amateur to pursue only a sub-set, as long as the
service as a whole is achieving the desired goals (as detailed in 97.1).

>>I personally get a kick out of technical stuff myself, but I've
>>come to grips with the simple fact that technical interest and
>>Morse code are only two facets of a broadly defined service.
>
>Dana, some people are of no use to this service no matter how
>broadly you define it. They just want a free ride. No, I stand
>by my previous statement. Even relatively uninformed people know
>this is a technical service and that Morse proficiency is an
>integral part of the licensing process.

Perhaps some people are of no use to amateur radio, but that has
nothing to do with which of the stated goals they interested in
pursuing. If someone is interested in pursuing only one goal of
the service, they provide value and it isn't up to us to decide
whether that goal is good enough.

As for the flame fest with Drew, I'd been under the impression
you knew better than to publicly pick on the class dolt. It just
encourages him, and, sooner or later, you and the dolt don't look
any different.

>BTW, you still haven't answered my previous question. What is
>it that you believe would be accomplished by elimination of the
>Morse requirement for HF radiotelephone privelages?

Not to dodge the question, but some of the least technical amateurs
I've met have been hard-core CW Extras. I'm not saying all Extras
aren't technicial, nor am I saying that all CW enthusiasts aren't
technical. What I'm saying is that it is pretty clear that CW
doesn't make one technically adept; it is an independent skill.

So, maybe it is my own bias towards technoids that makes me think
the service would benefit if an extended technicial (or even operating
pratice) exam was offered as an alternative to 1(C). In other
words, if Morse code floats your boat, you can pass 1(C). If
you're a tech-head, you can pass 5(A) and get the same credit.

Personally, I look forward to the day amateurs can get past the
us/them attitude with respect to CW. It is just a mode, and a cool
mode at that, but it shouldn't be the litmus test of good and bad.

>homeowner in FINDING and helping eliminate the cause of interference,
>than in creating it.

Absolutely. This is a very important point. It comes up all the
time with ref to PRB-1 and other things. We hams do indeed have
the law on our side most of the time, but that is not the operative
feature here. We need to keep people in support of ham radio as
a good hobby, not a troublesome one. Remember that if Congress
wanted to, they could just END ham radio tomorrow. There is NO
constitutional right to ham radio, we are afforded the rights
we have because the nation considers us important. If that stops,
watch the frequencies all get auctioned off to the highest bidder.

We need to keep in touch with the public relations aspects of
ham radio at all times. Go easy and be kind. Be helpful.

Those who read the ARRL bulletin know that gate 1A pertains to holders of
CLUB callsigns as of March 1995 (last year!).

1553. Re: Problem with tale name of "boatanchors"?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-21 00:00:00 UTC
From: dseal@armltd.co.uk
Message-ID: <4nsus6$67k@doc.armltd.co.uk>
Source record: 224900
Cross-posted to: news.groups,rec.radio.amateur.misc

jmlowman@ix.netcom.com(Jim Lowman) writes:

>I think that "outsiders" refers to those who probably will never read
>the proposed newsgroup; i.e. those like group-advice that just want to
>argue for a name other than "boatanchors." As someone has already
>suggested, perhaps rec.radio.boatanchors would have been a better
>choice.

No, rec.radio.boatanchors is *not* a better name.

I'm perfectly happy to accept that "boatanchor" is a well-known term in the amateur radio community, and thus that it is OK to use the term once the context has been set by putting it in the rec.radio.amateur.* hierarchy.

But I *know* that "boatanchor" is not a well-known term among people who are interested in radio in general. I've listened to thousands of hours of radio without ever hearing the term prior to this debate. I am certain that most people who are interested in radio in some way are in the same position. If you have to have this group at the third level, directly under "rec.radio", then you have to make the name comprehensible to most people who are interested in radio.

Use an insider's term like "boatanchor" in something like "rec.radio.amateur.boatanchor" which sets the context well enough to tell us who the insiders concerned are, and you won't get my NO vote. (Note that I'm not especially attached to "amateur": anything that restricts those still interested to people who will generally know what "boatanchor" means will do.) Or use a non-insider's term like "antique" in something like "rec.radio.antique", and again you won't get my NO vote. But use an insider's term like "boatanchor" in something like "rec.radio.boatanchors", and you most certainly will get my NO vote.

Basically, as far as I am concerned, the price of using an insider's term like "boatanchor" in a newsgroup name is that the name should also tell us *who* the insiders concerned are. This will save outsiders from having to puzzle out what the group is about; it will also save insiders quite a lot of incursions into their group by confused outsiders...

In <4nsmov$8mu@xochi.tezcat.com> abbyfg@tezcat.com (Abby Franquemont-Guillory) writes:

>So you don't worry that would happen to the Big 8 if it were to
>become utterly unmanageable? Much of the reason the Big 8 gets
>the kind of propagation it does is because it is relatively
>orderly, because concern is there for technical issues and stuff.
>--

Nothing wrong with order, but some of the arguments I've seen against rec.radio.amateur.boatanchors are putting too fine a point on it.

Of course, all of this is moot unless the proponent gets around to putting up a RFD - seems like we've already had the discussion.

Jim

3C0 -[Annobon Isl.] Teo (EA6BH) has plans in returning to Eq. Guine and
operate from Annobon Isl. (3C0).
3V -[Tunisia] YT1AD will operate again from 3V8BB , May 23rd to 30th.
6W1 -[Senegal] N2WCQ/6W1 is QRV until May 29th.QSL via PA3BUD.
6Y -[Jamaica] From June 13th to 29th , Theo (PA3ARL) will sign /6Y5.
9L -[Sierra Leone] Baldur is active from this country as 9L/DJ6SI.
BV_iota -[Kin-Men Isl.(IOTA AS-102)] This Island should be activated in late
July , during 5 days. They will have two active stations at the same
time.Callsigns to be used are BO0K and BO0KS. (Nice calls , Hi!).
9N -[Nepal] Kyoko has returned to Nepal where is signing 9N1KY until
July.
C2 -[Nauru] C21/JA1WPX is active , specially on 160 , 80 and 40 mtrs.
C6_iota -[Green Turtle Cay IOTA NA-080] Untill June 12th, KM1E as C6AGN.
QSL via KA1DIG.Aslo from C6 , June 7th to 17th , WZ8D as C6AIE.
CQ1_fd -[Portugal (Fiel Day)] The A.R.V.M. and R.C.O. are preparing a field
day for June 1st to 2nd.The event will took place in the Obidos
Castle.QRV on HF (20/40/80 mrts) SSB, VHF Packet as CQ1O-5 and also
on ATV.
CT1_iota-[Insua Isl. (IOTA EU-150)] The NPDXG DXpedition Team is preparing a
DXpedition to this Island for the 1996 IOTA Contest.Operation before
and after the contest.The Team is composed by : CT1ZW, CT1DVV,

CT1EEB, CT1ENQ, CT1ESV and CT1ETZ.Also joining our team : CT1BWW and CT1FMX.
CT1_iota-[Berlenga Isl. (IOTA EU-040)] The GPDX Contest Team will be active from this Island for the 1996 IOTA Contest.Team is: CT1AHU, CT1BOH, CT1BOP, CT1CBI, CT1DIZ and CT4NH.
D6 -[Comoros] DL4XS, DL6ET and DL3KDV , from August 22 to September 4 on all bands including 160 mtrs.
EA_iota -[Sancti Petri (IOTA EU-143)] From June 8th to 9th , ED7SPI. QSL via EA7PY.
ET -[Etispia] DK3VN reports that Peter (ET3BN) has been active on 20 mtrs.RTTY normally from 1800z to 1900z on 14.085 Mhz.QSL to P.O.Box 150194, Addis Ababa, Ethiopia.
F_iota -[Fort Enet (IOTA EU32/65)] Didier (F6ELE) and Bertrand (F6HKA) will operate from Fort Enet (IOTA EU32) on May 18-19 and Molene island (IOTA EU65) on July 25 to 29.Also HB0/ from July 13 to 19. They will active 160 to 10m.
F_iota -[Friuoul Isl. (IOTA EU-095)] TM1MA wil be active from May 16th to 18th.QSL via F5TKA.
F_iota -[Vierge Isl. (IOTA EU-105)] Derek (F5VRC,ex-GW4VRV) will be active from this Isl on May 24th to 27th.
F_iota -[Cordouan Isl. (IOTA EU-159)] From June 28th to July 5th , F6EXQ and more operators will be active from this Island as F6KSA/P .
FO_iota -[IOTA OC-067] Stan (FO5IW) has been heard on 20 meters .
G_iota -[Monach Isl. (IOTA EU-111)] GM4FDM, GM3NIG, GM3UTQ, GM4YMA and GM3COB are planning a DXpedition to this Island for the IOTA Contest Callsign maybe GM5VG/P.This Group has benn inactive since 88/89.
G_iota -[Wight Isl. (IOTA EU-120)] G0ORH , G3KLH , G3ZGC and more op's from the Newbury Radio Club will participate in the 1996 IOTA Contest from this Island.
HL_iota -[Chebu Isl. (IOTA AS-105)] Min (HL1SSG) and members from the Korean DX Club will be active as DS0DX/2 , from May 24th to 26th.QSL via HL1XP.
I_iota -[Toscano Arq. (IOTA EU-028)] IK2HTW will sign /IA5 from June 16 to 24.
IS0_iota-[IOTA EU-165] During August , Davide (IK1TKS) will be active from some Islands: (EU-165) San Pietro (IIA CA-013), Piana (IIA CA-008) ,Ratti (IIA CA-010) and Calavinagra (IIA CA-019).Davide will sign IM0/IK1TKS.
JA_iota -[IOTA AS-067] Yuki (JI6KVR) will be active from this group for the IOTA Contest.
JD1_iota-[Iwo Jima Isl. (IOTA AS-030)] JH2ENF/JD1 is active from this Island mainly in CW.
JD1 -[Minami Torishima] JG8NQJ/JD1 is QRV untill May 21st and again for a three month period starting July 15th.QSL via JA8CJY : Susumu Sanada, 5-4 Shin-ei, Toyohira-ku, Sapporo 004, Japan.
JX -[Jan Mayen] Per (LA7DFA) is QRV on 20m CW (14.008Mhz) with call JX7DFA.Fridays from 1000z to 1400z on RTTY.
KL7_iota-[Barren Isl. (IOTA NA-New)] John (NL7TB) reported that the DXpedition to the Barren Isl. is confirmed for July 4th. during 4 days.The call will be NL7TB and operation will take effect from

Ushagat Isl. on 80,40 and 20 m SSB.After this they will try to put
on the air some more Islands :
Callsign Island data QSL mgr

New Logging Software mainly for VHF'ers ! -> A new version of TACLog (1,40)
was released on 24 April 1996 :

TACLog is a contest log program devoted to VHF and up. Some of
the features are:
- free format input (random order)
- multiband support for 14 bands simultainously
- counters for DXCCs, WWL, DOK/UK Counties/CQ/ITU/States/Provinces...
- Region 1 standard file, REG1TEST (and NORDACTI, RSGB, ARRL)
- automated locator look up, also vs band
- search and find functions
- QSO-points vs distance, radial ring, WWL ring
- CW & voice messages (voice keyer or Sound Blaster), PTT on COM/LPT
- multible user dependent editor environment and voice messages
- QSL management
- tons of statistics, reports and polar (beam) maps

- configurable for 7,4 * 10^40 different contest
- Wizard set-up for contests
- set-up for maximum performance of PC
- accepts microwave WWLs, converts to closest WWL
- context sensitive help texts in DAN, DEU, ENG, ITA, NED, and POL
- runs on 8088 PC (XT)
+ much much more, try it and you will love it!

* * * Public Domain * * *

You can find TACLog (TACL140.ZIP) at:

Hello Drew,
Still beating the drums for the lowest common denominator,
eh? Still want hf privileges for all? Still want to make hf phone operation
a right for all non/semi achievers? Still whining about about those that
have a little more talent, skill, brains, knowledge, initiative, etc. than
you? If you spent as much time applying yourself to the task of upgrading,
and less time snivelling about the unfairness of life, you could probably
have it all, with the pride and moral righteousness of earning it. I and
others owe you squat! Laziness/incompetence is owed nothing, and has no
claim in my world. I, and a bunch of others, wanna free lunch. You wanna
feed me? You think you have enough to go around?

I think you have forgotten the last lesson about big dogs, Drew.

Have a nice day.

You should be very good at recognizing whining.

Anyway, I've already told you that 11 meters was just an example
of what happens when people get something for nothing.

>Socialist Security (hey, I like that one!) is redistribution of
>wealth, pure and simple. As ridiculous as the code requirements

Spectrum is wealth too, and you're demanding that the government
redistribute it to you. That can't happen unless it's at someone
else's expense. The principle is the same.

If you feel that way, why did you bother to get a license? Didn't
you know about the Morse requirement going in? Also, how do you
account for the younger people who agree with me, or the fact that
when I was 14, I felt the same way about Morse as I do now?

>I'm not interested in radio? Uh, okay....I guess that's why I
>have chosen commercial radio as a career and been in the business

I spent a few years in that line of work, too. The majority of
people I met had no interest in radio - it was just a way to earn a
living. Considering your lack of respect for the Amateur service
and its members, I'd say you're probably in the same category.

Of course you already know that the radio does NOT comply with the FCC
type-acceptance requirement for use on Part 90 frequencies, right?

I never knew that. Perhaps commercial interests were partly
responsible for the move to 27 MHz? The F.C.C. does allocate
spectrum on the basis of commercially-available equipment.

>In case people don't remember, CB was licensed for many years
>on 11M.

That, I do remember. Some people now want to do the same thing
to the Amateur service.

I have been running a Maggiore Hi-Pro repeater on 440 Mhz since 1986
with only one breakdown. The site was hit by lightening and the
COR/identifier board was the only casuality in the system. After slipping
in a substitute board, the machine was back to normal. I don't even
count this problem as the fault of the equipment, because no brand of
equipment is safe from a lightening strike.

Before all of you commercial equipment fans get all "uppity" about
how good Mastr-pros and Micors are, and that they will out-last any
amateur grade repeater, let me tell you that my repeater is, and has been
one of the busiest repeaters in the Philadelphia area and has seen many,
many hours of use. Some days the machine never stops transmitting
from 8 a.m. until 8 p.m. My friends who have used retired commercial
equipment throughout the same period of time have suffered dozens of
breakdowns and hundreds of hours of downtime. I can still count
the number of hours, not days, of downtime on my machine with one hand!

I don't know about the Yaesu brand, but some friends have used an
Icom repeater which has proved itself well over the last 10 years too!
They have been down more times than my machine, but not much more.
The thing that I did not like about the Icom repeater was the EPROM
controller chip that was not easily modified. My friend had to go through
a lot of trouble to put an ACC RC-850 controller on the Icom. Keep
in mind that I am talking about a machine that was sold ten years ago.
They may be different now!

In article <4nncgp$5f@crash.microserve.net> jackl@pinetree.microserve.com (WB3U) writes:

>It doesn't matter that CB is near 10M. The injustice is that 11M
>was taken from the Amateur service and turned into a wasteland.
>
Uhmm...excuse me Jack, maybe in 3-land it doesnt matter, but here in 6-land the proximity of CB to 10m is (and has been) a severe annoyance to licensed operators in the 28.0 to 28.5 MHz region. The so-called 'freebanders', and bootleggers and other scum regularly encroach on this area. Despite careful log-keeping and Df'ing, the FCC and the ARRL are completely unwilling to do a damn thing about it. Some claims of budget/manpower shortages explain *some* of the situation, but here in Los Angeles the issue of 'who's-doing-it' comes into play as the focus sharpens.

The simple fact is that 90% of the encroachment in L.A. can be traced to the large Hispanic population. These people refuse to speak English, refuse to even acknowledge that they are breaking the law, and continue to use their high-powered stations in the 26-30MHz region with impunity. They also ocassionally bootleg on other Amateur Bands, often running FM on 15,20 and 40 meters!

The FCC did a sweep of the area in the early 1980's and levied fines that totalled several hundred thousand dollars. The bootleggers, mostly Hispanics, filed a class-action lawsuit claiming that the FCC's actions were a case of "selective enforcement...against the southland's Latinos". MALDEF, the LA-based Mexican American Legal-defense and Education Fund (a group of Hispanic lawyers operated out of a storefront legal clinic at the time) insisted the charges be dropped on that basis, threatening to hold the FCC's actions "As a blatently racist attempt to use selective enforcement...against the Latino community."

Needless to say the FCC dropped the charges against the 200 or so offenders, and hasnt had the balls to go after the problem in such a sweeping effort since!

The real injustice is that our own duly elected representatives have also turned a deaf ear! I have written countless letters to Fed/State and local politicians about the problem and they have all politely refused to do anything that might be-smersch them publically. They are all sooo afraid of being falsely labelled as 'racist' in this by the Media, that they will not take the slightest action!

David Sumner, K1ZZ in his letter to me stated that: "..legal actions against such persons is a relatively low priority.."

Which is Bureaucrat-DoubleSpeak for: "We're afraid of what the Media will do to our public-image if we take any action!"

In short Jack, be glad if your area of the country is not so affected - but be aware that the problem is growing and spreading. It will eventually involve

most metropolitian areas..and beyond that, perhaps even Newington, Ct. ;-)

I'm at a loss to understand how someone who admittedly doesn't know
code can go on and tell us how boring HF conversations are. Since
about half the HF QSOs occure via CW, it seems you'd need to know
the code first to be able to judge the content of all the communications.

>In 10 years ham radio will be of historic interest only with no
>spectrum as this will be taken over by more pressing commercial
>needs.

Really? There's no commercial interest in our HF frequencies; we've
gained spectrum down there over the last decade, and probably will
gain more in a couple years. The commercial folks are interested in
that portion of the spectrum where one doesn't need a coded license.
So if you're so concerned about the possibility of losing UHF-and-
above spectrum, get to work on that no-code license and be fruitful
up there.

Paul,

Would you mind sending me a snailmail copy of the article? I'd buy the magazine but now that they're slandering us illegal airwave users I'd feel sort of hypocritical paying money to someone I'm about to blast. I think if every YL in every club in the USA were to tell them that they refuse to buy their magazine or any product associated with any advertizements until they make an appropriate retraction, they'd think twice. They'd also probably be amazed at how many women are participants of the hobby. Thanks for letting me know just what kind of air-head over-paid idiots that the Ladies Home Journal employs.

BTW, I'm the wife of one of the engineers who invented one of the first cordless phones (and still doing patent infringement checks) so WATCH OUT LHJ! I'm also the editor of our local club newsletter, so WATCH OUT LHJ!

TIA!

The ARRL Repeater Directory lists "gentleman agreements" for the VHF bands to keep the SSB guys from walking on the EME CW guys, etc. Has anyone seen a similar list for the HF bands.

For example, how are the CW portions of 80 and 40 split between cw, amtor, rtty, qrp, DX, etc.?

There are all sorts of freqs on the HF that particular modes migrate to. Does anyone have a list?

It is over. Have a look at www.arrl.org/iaru and click on the very first link; this is to the FASC committee discussion paper. They have already decided to ask that S25.5 or 3, forget which be dropped from the ITU international treaty which nations sign that issue amateur radio licenses. So, CW as an international treaty req may, very soon, be gone. Look at paras 9.12, 9.13 and 9.14 for why they want to drop CW and go on to other issues; such as what SHOULD be the requirements for HF spectrum technical/operational requirements to obtain a license be?

Since I've only met ONE person who ever managed that feat, I'd say
only 1% of hams have done this.

I failed the first time on my general code after 9 months of practice.
After 12 months I passed.

Everyone is different, but times average from 3-9 months.

1586. SURVEY: How long did it take you to pass 13wpm code test?

Yes, and I'm sure there are hams who have no idea what "homebrew" means,
yet we've got a subgroup that contains that word. I bet there are even
hams who don't know what "DX" means, yet the CFV for that group is under-
way.

I just wish someone would post the RFD so we can finally get to the CFV!

|Yes, I'm sure it does. Considering the remaining VHF/UHF bands are already
|sparsely populated, why would a codeless tech want to invest his hard earned
|money on equipment that wouldn't allow him/her to talk to anyone?

Well, you can get a 10 meter only rig for about 250 dollars US. And that
is an HF all mode radio. Unfortunately, there isn't too much going on with
10 meters right now, but when it's open, there's good CW, packet at 1200
baud, instead of 300, FM rptrs, some sat work, and good old ssb phone. I
saw articles in QST that showed amateurs with 100 countries and only a 25
watt 10 meter rig. The code req for most of this is 5 wpm, but you need a
general to access the higher portion of the band.

|From what I can see, no-code hams are trying just that by whining about
|having to copy 5wpm CW in order to get on HF. Reduce the alledgedly difficult
|requirements and there would be more hams on hf than you could shake a straight
|key at.

|to say that if tomorrow the FCC said, "all no-code techs can now operate SSB
|on 80 meters," there wouldn't be a tremendous rush of codeless techs on 80M?

Maybe, but again, antenna requirements are pretty large for that band, and
alot of people in Apt. buildings and condos have restrictions on what they
can put up, if anything at all. Don't know if you ever op'ed with an
indoor antenna either, but it begins to get a little unpleasant even at 25
watts with a ten meter rig. I had a dipole strung up near the ceiling. Not
too much fun at all.

|Can you honestly state that you have tried 15 minutes twice a day for 3
|weeks and failed the code test?

I started out with the Code tapes in the Novice Test book. I practiced twice a day daily, and was really nervous that I would fall on my face. So I studied and studied the code, and the theory. Theory wasn't too hard, because I already had a college education in Acft Elect Sys from the USAF. COde was really bugging me, like it is with most of these guys. Anyway, I got the shortwave set up to practice the Arrl code practice sessions, and worked my speed up to about 10 wpm before I took the code test. I took almost a month and a half to do this. Then I was ready.

The code test sessions began as always with 20 wpm,
but the tape machine was really bad that day, and the
audio kept fading in and out. and by the time they got to 5 wpm, I think I was literally turning blue. Well, I took the code test at 5 wpm. You should have seen the look on my face when I found out I passed it with 100%. Not one single letter was wrong. The written test for Tech almost wasted me, but I got through it. It's amazing, I think, because code really scared me, and I did well with it. Right now I'm using Morse Academy to get my speed up. Copying 5 letter groups at around 16 wpm on the average. I still miss punctuation, and the prosigns throw me because the computer uses different symbols for the signs AR,SK,BT etc, but I'm getting the hang of it. This time though, when I take the test, I think I'll work a little harder on theory. I'd hate to think I worked so hard on the code, and then not passed the test because I got burned on theory.
ttyl.

| In case people don't remember, CB was licensed for many years on 11M.

When I was 9, I got a code practice oscillator, after reading about Ham Radio in Boy's Life magazine. I couldn't afford a rig, and no way was anyone else going to learn the code in my family to use it. I finally talked dad into getting a C for us instead. We got the radio and set it up, and waited for our ticket. When we finally got it, we were KYE4359 on 11m. Well, to cut a long story short, before long, there were HT's, mobile rigs, beam antennas, and the like. The whole family took to it like ducks to water. This all took place about a year to 2 years before the licensing requirements were laxed. It used to be such a fine band, self policing, alot of emergency traffic, and no cursing. It's a shame the FCC has never seen their way clear to reestalish licensing requirements for this band. Maybe with the advent of the family band, they'll give us 11 meters for HF use, along with the extra 27 meg freqs that are unused. I'm sure we could find something to do with them, and my rci-2950 will accept the mod. 73, ttyl.

Hi gang:

Just got this from Tim Wright, KD4OVM, who's an Internet friend of mine.
Thought it was WELL worth passing along as this could have some bearing as
to where the Amateur Radio Service stands in the eyes of the law....

I'm sure this isn't the last of this..... :(

73's for now my friends!!

Patrick, KB0OXD

---------- Forwarded message ----------
Date: Tue, 21 May 1996 00:45:08 -0400 (EDT)
From: Tim "Smokie" Wright <t.wright@morehead-st.edu>
To: Patrick Cook <pcook@interealm.com>
Subject: Christain County Ham Busted

A Christain County Kentucky ham (newly appointed ARES Director for that
county) was busted by local police and charged with illegal possession of
a radio capable of receiveing police frequencies. This youth

or young man goes to trial in the Christain County District Court on June 4th unless a continueance is granted per the request of ARRL Attorneys.

Police confiscated the only radio (that I know of) a Radio Shack 202 HT 2 meter transciever. Police authorities state the radio had been modified not only to receive Police Frequencies but to transmit on them.

Expected to testify is officials from Radio Shack out of Ft.Worth HQ. ARRL top dogs. Other hams friends and those highly skilled in the field of Radios and their licensed repair.

This will be a test case of this law that permits Ham Radio Operators to have in their possession radio's capable of receiving police Frequencies either on their person or in their privately ownen vehicle.

If I can I am going to try to be there myself. I will keep you posted on this.

later Pat

The interesting thing to point out here is that cordless phones are not
"protected" from interference from licensed radio services (that's us)
and the user of the cordless phone is the one who must cease & desist
if the phone interferes with amateur radio stations. When I find
the specific reference I'll gladly post it so it can be included in
letters to the LHJ.

Larry:

Only a small percentage of Boatanchors are military and government surplus pieces, most popular are the R-390/390-A receivers and a few WW-II pieces such as the BC-347 receiver. Most Boatanchor equipment of interest today include American-mane commercial ham gear circa 1950 - mid 1970s. Manufacturers like Collins, Hallicrafters, National, Drake, Hammarlund, etc.

>Whats wrong with rec.radio.boatanchors ?
>or rec.radio.milsurplus.tubes? Or rec.radio.firebottle.stuff?
>Inquiring minds want to know why so many people are so set
>on having both "boatanchors" and "amateur" in the newsgroup name.

rec.radio.boatanchors is not descriptive enough. Most of the boatanchors enthusiasts are amateur radio operators who use this equipment on the amateur bands. That's why 'amateur' belongs in the newsgroup name.

Hope this helps.

Source record: 224977

I checked into an ARES net on Sunday Evening and was informed a Christain County Kentucky Ham (call or name unknown) had been busted by the local police for possession of a radio capable of transmitting on police frequencies. According to the report, the ham was in Possession of a Radio Shack 2 meter HT the 202.

The report also stated that Radio Shack people, ARRL people and a bunch of others are going to testify on behalf of the Ham. His court date is June 4th at 08:30 hrs Eastern time.

Has anyone else heard this and/or can verify this? If you can Please reply. If this ham is convicted it will void the scanner law that Kentucky passed several years ago that added Ham Radio operators to the law that could have devices in their vehicle that could receive police broadcasts.

Thanks

If the radio in question was an HTX-202, the "scanner law" doesn't even apply here. An HTX-202 is not a scanner, nor can it even be modified to receive police frequencies. An HTX-202 is an amateur radio transceiver, and as such, it's possession is legal in all 50 states as per Federal law.

The ham should be suing for false arrest, illegal confiscation of his equipment, etc!

I have no strong feelings about a "boatanchors" newsgroup, but
I understand why there might be confusion. I was first introduced
to the term as meaning "any useless piece of electronic gear".
Obviously it must have some different meaning in ham circles.
Can anyone enlighten me?

Thanks.

So you don't worry that would happen to the Big 8 if it were to
become utterly unmanageable? Much of the reason the Big 8 gets
the kind of propagation it does is because it is relatively
orderly, because concern is there for technical issues and stuff.

I don't think finger pointing helps anyone. I believe the point to make
is that "static" can be cause by any spark, such as lightning, lamp
dimmers, and motors. If ANYTHING, a HAM is more likely to assist a
homeowner in FINDING and helping eliminate the cause of interference,
than in creating it.

>entire point of the argument that was represented by the respondants.
>

The assertion was made in the final paper that Morse code was more efficient over other digital modes. Instead of dispassionately reporting these facts, Burke agreed with these views. (see earlier quotation of the posting) When challenged, Burke's only support for the assertion of Morse code's efficacy is that it uses less bandwidth than the recieving filters of a PK232, ignoring completely other factors that would refute the assertion.

>
>Now your outside the bounds of the original discussion, which is on
>a technical point and has NOTHING to do with the rest of the argument.
>

But indeed it has everything to do with the survery. It is not at all surprising that there are amateurs who do indeed believe that Morse code still gets through when all others fail. (Considering that this mythology is still propagated in amateur radio courses, it is not that all surprising.) In fact, the author of the study agreed with that notion, without having done any substantive research to see if there was any truth to this notion.

>Not only did Burke agree with that
>> claim, he further emphasized that this was true mathematically. When
>> challenged, he claims that Morse code is superior mathematically
>> because is uses a smaller bandwidth than a commercial mult-mode

>> is misleading.
>
>Again, the argument was carefuully crafted to force a specific answer.
>Indeed, to present one small technical aspect skews things, but this is
>exactly what happened.

"Carefuully (sic) crafted" indeed. If on the one hand, the respondents
were incorrect, then it was ingenuous of Burke to agree with their views.
In other words, no doubt a survey would reveal that many amateurs
believe in the supremecy of Morse code - it is quite another for the
surveyor to agree with that notion, particularly based on only one
factor.

>>
>> >Efficiency is relative anyway. I can prove several ways in which

>> in the paper.
>
>No, it wasn't, but you apparently didn't understand that I was making a point.
>In this case, I crafted an argument in such a way as to FORCE a given result.
>

In other words, Burke was not making a survey to determine any specific
other than to find data that would conform to his notions. That is not a
survey, it is an editorial. To disguise the latter in the clothes of the
former is intellectually dishonest.

>
>Yup, but now you are using a different coding scheme. French vs English.
>A french cw op would probably have no problem with that, no disageement there.

No, to the contrary, I was using the same encoding scheme, called the
International Morse code. That I use another language does not change
the encoding of the message. Moreover, in order to preserve the
integrity of the message, it is the responsibility to ensure the copied
accuracy, not to fill in the blanks. Otherwise, we are doing a diservice
to ourselves because we cannot be trusted to send and recieve the traffic
as requested.

>> An English speaking operator would be at a disadvantage because he would
>> not be able to fill-in the missing letters. No such concern when a
>> digital mode is used.
>
>Wrong, If that were sent using rtty, or AMTOR, I still wouldn't understand French.....

But as the radio operator, it is not your responsibility to understand
the message, only to handle it, regardless of the language. As stated
earlier, "filling in the blanks" is utterly forbidden.

>> Fair enough. You've been able to dry out your computer and find that it
>> works just fine and the multi-mode controller is operaable. But because
>> you sustained a head injury, you are deaf. Which system is more robust
>> now?
>
>
>AHA, see, now YOU have crafted an argument that FORCES a specific result!

Yes, the specific result was to show how infantile it is to force a
particular arguement, as I indicated earlier as follows:

>>
>> We can go on and on with these silly little scenarios until we go blue in
>> the face, it still doesn't make it any the less true that Morse code
>> communciations is not as efficient as digital communciations.

>> It was Burke who made the technical claims of the superiority of Morse

>> about and there is no documentation to support his assumptions.
>
>I DID NOT MAKE THE TECHNICAL CALIMS, I REPORTED THEM AND THEY WERE CORRECT
>IN METHOD USED TO CONSTRAIN THEM!
>>

To be rhetorical - then why did Burke not dispute these statements
instead of supporting them? As stated earlier, to report a misconception
is one thing, to support it is another.

>>
>> No I am not. The published results in no way reflect the amateur
>> community. I would be more please if Burke would include such a
>> statement and that his contention that Morse code is superior to all
>> other available modes is seemingly based on so narrow a parameter, it is
>> misleading in the extreme.
>
>If you would go back and actually READ the purpose of the paper, yes, it was.
>All of the other demograpic data was window dressing, it could have all been left out
>and NOT affected the purpose of the paper.
>>

I have no quarrel with the demographics portion because I knew
immediately that the data derived from that section would have been
representative of only those respondents. As I have said before, I take
issue with the methodology of the survey, making it utterly worthless,
and the false assumptions of the efficacy of Morse code over digital
modes.

>
>>
>> I just did and will continue to do so.
>
>And you continue to make incorrect statements. You have continuously reported that
>the technical comments in the paper are mine, THEY ARE NOT.
>

Really? If one reads Burke's report, that is not how it is presented.
In fact, Burke agrees with these assertions.

>You failed to see that the technical argument was clearly structured in such a way as to
>FORCE a given result.
>

Then the paper is an editorial, and not a study.

>You are making arguments about statistics without understanding the
>purpose of the paper.
>

But the purpose of the paper hinged on the results of the survey. Since
the survey was defective, the results as published in the paper are
similarly defective.

>You are making comments about the randomness of the survey with criteria
>other than those which fit the purpose of the paper.
>

To the contrary, I am pointing out the feeble attempt to use data drawn
from an enept survey and present it as factual.

>You are also assuming that I am in favor of keeping the morse code
>testing requirement, when in fact, you have absolutely no idea what my
>position is on that. You continue to base that assumption on the

>repondants arguments.
>

I have no idea on what your position is on Morse code testing, nor do I
care. I do take issue with ineptly surveys presented as a valid means of
measuring a specific population. Furthermore, I also take issue with
asserting that Morse code communciations have greater efficacy than other
modes, particularly digital. Moreover, if Burke was just reporting the
responses from those who decided to provide input, then he was
disengenuous to agree with them in his survey if he knew otherwise.

>You have so far not demonstrated any technical capability of your own, whereas
>I have already mathmatecally proven the repondants argument based on
>THE BOUNDARIES OF THAT ARGUMENT. Therefore, you arguments on technical terms has no
>merit.
>

The so-called boundaries of that argument are flawed. More to the point,
Burke has not proved mathematically at all - he has just provided
unsubstiated opinion. Indeed he is the individual who is without
technical merit.

Cross-posted to: news.groups,rec.radio.amateur.misc

Jene tajpis lastatempe Mark Hood:
| The whole namespace purity argument is becoming obsolete. Newsgroup
| proponents should be allowed to name their groups whatever their
| constituents feel would best describe their identity. If there is then a
| real need to aid users in figuring out what newsgroups would be interesting
| for them to visit, some enterprising business or industrious group of
| volunteers will undoubtably publish guides or develop search engines tuned
| to the current state of Usenet.

True, true, true. And in the case at hand, if the term "boatanchors"
is meaningful to radio amateurs and is a topic that has enough discussion
to warrent its own newsgroup, then it =belongs= in the newsgroup name.
The fact that someone disinterested in amateur radio doesn't know the
meaning of the term is irrelevant, since he can tell by the first few
parts of the name that he is not interested.

Take, for example, <rec.games.board.ce>; if you're not interested in
board games, the fact that you don't know what "ce" refers to is not
important. If you =are= interested, but don't know what it means, then
you are allowed to tune in for a while to find out that it's an
abbreviation for "Cosmic Encounter", the name of a particular board game,
or you can simply =guess= that it's a code for a particular game.

>>required in a truly dire emergency, but the decision to learn it
>>will rest with the operator's willingness to improve his skills.

>....and the actual value of Morse code in an emergency context.

The exact value of any mode can't be known in advance. It will
be determined by the nature of the situation and the equipment
available to everyone involved. If Morse proficiency is needed
in an emergency but the operator doesn't have it, it's too late.
If for no other reason than this, an inability to use Morse
renders an operator's services less valuable.

>>>and/or spreading international goodwill would be interested in
>>>amateur radio.

>>Like Drew said, this can be accomplished on the Internet.

>So, the amateur rules need to be re-written to eliminate at least
>two reasons for the existance of the service? Really?

I don't understand why you said this. You know as well as I do
that ham radio isn't the only vehicle for international goodwill,
emergency communications or development of operator skills. I'll
ask my question again. Why would someone who isn't technically
oriented, and who also doesn't want to learn Morse, bother to get a
license? What compelling reason is there for someone like that to
sign up for such self abuse when the three interests you mentioned
can be satisfied (perhaps more effectively) through other means?

>Be very, very careful, Jack; you're standing on shaky ground. The
>rules don't require that every amateur pursue every purpose of the
>service. The rules say "here are the kinds of things this service
>is intended to do", and it is certainly consistent with these rules
>for each individual amateur to pursue only a sub-set, as long as the
>service as a whole is achieving the desired goals (as detailed in
>97.1).

Is pursuit of a subset actually condoned, or is it simply not
practical to enforce all the stated purposes in a service
designed to encourage participation by those with minimal
resources? At the very least, your interpretation would appear
to be contradicted by the existence of different license classes

and incentive licensing. Those concepts aren't based on the
service as a whole, but on individual activity.

I think we're getting sidetracked here, though. Personal goals
and interests aren't necessarily the same as knowledge and skill.
Only the latter are used by the F.C.C. to qualify applicants.

>If someone is interested in pursuing only one goal of
>the service, they provide value and it isn't up to us to decide
>whether that goal is good enough.

I never said this wasn't true, I just asked a question. Honostly,
don't you see the irony in someone taking up ham radio as a hobby,
then complaining for weeks or months on the Internet about having
to learn Morse code?

>As for the flame fest with Drew, I'd been under the impression
>you knew better than to publicly pick on the class dolt.

I thought I'd been pretty civil to Drew. At least I didn't refer
to him a dolt.

>>BTW, you still haven't answered my previous question. What is
>>it that you believe would be accomplished by elimination of the
>>Morse requirement for HF radiotelephone privelages?

>Not to dodge the question, but some of the least technical amateurs
>I've met have been hard-core CW Extras.

Operators like this were very much in the minority before
incentive licensing and relaxation of the requirements.

>What I'm saying is that it is pretty clear that CW doesn't make
>one technically adept; it is an independent skill.

I agree, but the Morse requirement has played a major role in
shaping ham radio. Those who want to eliminate it are proposing
that the service be drasticallly changed. I think they bear the
burden of (at least) stating a meaningful objective.

>So, maybe it is my own bias towards technoids that makes me think
>the service would benefit if an extended technicial (or even
>operating pratice) exam was offered as an alternative to 1(C).
>In other words, if Morse code floats your boat, you can pass 1(C).
>If you're a tech-head, you can pass 5(A) and get the same credit.

I'm not totally opposed to this concept, but I think there are
several significant roadblocks. This is probably best discussed
in a different thread.

>Personally, I look forward to the day amateurs can get past the
>us/them attitude with respect to CW. It is just a mode, and a cool
>mode at that, but it shouldn't be the litmus test of good and bad.

Dana, you continue to pursue this from the standpoint that those with privelages view those without as being personally inferior. Use of the word "elitism" is particularly antagonistic in this respect and I'm tired of defending myself against views that aren't part of my position. Morse, as a means of communications, serves several useful purposes. The fact that it is a qualifier for additional privelages is not a personal issue except to those who are unwilling to use it.

Oh, but they DO talk about more than the weather, Bruce. Their subject matter also consists of such interesting topics as their health problems (geriatrics, colostomy bags, etc.), and usually a fair amount of whining and moaning about the no-code license and how the FCC took away "their" 11-meter band to give to those scum CB'ers 38 years ago, etc. Thrilling stuff, no doubt! Certainly makes all the young would-be hams want to throw away their keyboards and modems and run right out to get a ham license.

Neither of the three tendered options. There are two ways to mitigate the "no opinion" or "mind your own opinion" responses. One of them is to increase the sample size to overcome an insufficient response base or the other is to factor these non-responses with a somewhat decreased confidence level in the sampling.

>Another poll ran on the internet about a year ago showed the same results
>as your 56 person survey. This was one of those neat home page tallying
>setups, so everyone who participated could see the results. I think there
>were several hundred responses. The fact that a large majority of amateurs
>favor keeping the code test was again demonstrated.

And for the same reasons that Burke's survey was unscientific, so was that one. In other words, the aforementioned survey was not a true reflection of the amateur population at large; it was only a reflection of those who decided to answer the poll. Under those circumstances, the home page survey was invalid in accordance with acceptable sampling methodology.

Not to put a negative spin on this thread, but my experience was otherwise, when I e-mailed HQ to ask why our Field Day results from last year were not included in QST.

Ed Hare was kind enough to forward my request to the contest manager (I had replied to one of Ed's interesting posts to usenet) but I never received any acknowledgement to my original request, or two follow-ups.

It wasn't until my Division Director raised hell with HQ that I received any reply, and then it was the very next day.

Never did get much of an answer, so I can only assume that the paperwork was lost in the mail. Lesson to be learned, since I'm FD chairman for our club this year - no more USPS!

Passing along for those in the North TX/Southern OK
area who might be interested:

MADD Bike Rally

The annual Mothers Against Drunk Drivers Bike Rally will be this
Saturday, May 25th. Around 800 riders are expected. The ride will
start from the Isle DuBois Park on Lake Ray Roberts. DCARA has again
been asked to provide communications for this event and we will need all
the help we can get. The riders should be back to the park by noon,
where the police department will be serving hamburgers. This will be a
fun event, so come out and get involved.
Be at the park by 7:30 am. Hank (KB5THB)will be at the entrance
to hand out entrance passes. Talk in will be on the 146.92 repeater.
Call Hank (KB5THB) at 817-382-6340 or George (WA5HKW) at 817-382-2198
for additional details.

I talked to Hank and George and they both said they would love to have
any one from this or other clubs to participate. I worked this event
last year and if I can answer any questions feel free to call me.

Regards,
Danny Carman (LTARC)

The problem as I see it is not in the "efficiency" of Morse code but rather in what is meant by "efficiency" - the two arguements are based on almost entirely non-overlapping definitions. While the resulting sparks and flames are pretty to watch, they aren't really productive of any new understanding of the issues.

This shouldn't be an argument, its barely a discussion. The pragmatic, engineering approach would be to define a measure of efficiency first. Then compare ICW, and another mode. Pick the better numbers, and that mode wins <for that measure of efficiency>. No emotional process at all. There, I've just put an end to the last few year's worth of

Internet CW flamewars....you may all thank me.

ARRL HQ has also contacted them, primarily to offer some helpful
information how what SHOULD appropriately be done to cure interference to
telephones.

BTW -- we have a great non-technical pamphlet on interference that is
designed to be given to the neighbor of a ham. Send an SASE to the ARRL
Tech Dept Secretary, 225 Main St, Newington, CT 06111 and ask for the
"RFI Pamphlet."

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 MAY AND FORECAST FOR 23 MAY - 25 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 66/0

GOES satellite data for 21 May
Daily Proton Fluence >1 MeV: 6.5E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 5.3E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 May 24 May 25 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 May: 66/0

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 21 May
Learmonth 6 1221 1232
Fredericksburg 4 12
Planetary 5 11

Observed Kp for 21 May: 4333 2231

2B. MAGNETIC FORECAST
Date Ap Conditions
23 May 10 Quiet to unsettled
24 May 7 Quiet to unsettled
25 May 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
22 May Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 May Normal Normal Fair
24 May Normal Normal Normal
25 May Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 May 7

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 May 10 near predicted monthly values
24 May 10 near predicted monthly values
25 May 10 near predicted monthly values
COMMENT: Spread F observed during local night hours. Local night
enhancements observed at some stations.

Try NETDATE for Windoze. It internetfaces to tick.usno.navy.mil or
tock.usno.navy.mil .... and it shows you the delay in mSec between
time sensed and time flashed on your screen ... but, it compensates for
when plugged into your internal clock. Neat!

To find it ... try this FTP search engine. The ONLY search engine I
know of which looks for file names only. Again, neat!

! Biggest money making opportunity that ever hit Europe !

If you are living in europe and are able to watch Eutelsat II-F2 then
you
got the chance of a lifetime.

We run the biggest private Satellite TV network in the world called
HBN.

We will broadcast an unscrambled opportunity show on friday 24th of
may 1996.
The details:

Satellite: Eutelsat II, Flight 2, 10 degrees East, Transponder 22
Frequencies: 11.16333 GHz, horizontal polarisation
Audio-Subcarriers: english 6.50 MHz,
french 7.20 MHz,
german 7.02 MHz,
italian 7.38 MHz,
spanish 7.56 MHz.

Date and Time of the show: Friday 24th of may 1996
broadcasting time: 6.00pm - 7.30pm
GMT-summertime
(continental Europe 7.00pm - 8.30pm)

You're wellcome to subscribe to our mailing list to get always the
latest information
and the monthly program schedule.
Just send an email to mm@osn.de
with the subject: SUBSCRIBE-HBN-EUROPE

We will also broadcast in USA/Canada, Pacific-Rim and South America.
(SUBSCRIBE-HBN-INT)

We give you a great opportunity to work from home. You get all
information and
training right to your living-room via satellite and can establish an
international
business in now 33 countries. We offer you live training shows where
you can call in
on toll-free to ask your questions.

Don't wait! Subscribe for FREE now: email us: mm@osn.de Subject:
SUBSCRIBE-HBN-EUROPE

or out of Europe:
SUBSCRIBE-HBN-INT

We can answer all your questions in english and german.
If you want to join the company or for any other purpose feel free to
contact us via email.

Best regards

Source record: 224816

MPD>The poster of this message, Edwin "Jed" Barton (N1JBC), is a notorious
MPD>jammer/repeater hacker in Rhode Island. He has been legally banned from
MPD>several machines in the Southeastern New England area. Exploits of
MPD>his career are available upon request, but have also appeared in
MPD>the Amateur Radio Newsline posted to this newsgroup.

I would like to see this, because I know more of what has happened then
you think. I will get to that in this message.

MPD>**DO NOT** provide him with any information regarding the internal
MPD>operations of repeater systems. He *WILL* use that information in an
MPD>attempt to hack into area repeater systems that have remote control
MPD>operator input capabilities. He has used knowledge, such as vendor-
MPD>default feature codes, to hack into repeater controllers in the past.

I think he may know more then you think and I beleave more then you
about the operation of repeaters and the way to conduct your self
without making SLANDEREST REMARKS AND DEFAMATION OF CHARCATER witch is
unlawful. I would also like to know how you can legally band him from
a repeater, I may be wrong but you and the 146.700 group don't own the
freq. If I am wrong Mike I would like to know how you can do that
because I know someone that I would like to have this so called letter
to stop a Ham from useing the freq..

Let me tell you something about your so called jamming. I was talking to
N1JBC one nite on 440Mhz and there was someone on the CB 146.700
repeater at the same time he was useing the TM-733 to talk to me
because he needs that radio to get into this repeater. At the same time
he was talking to me there was someone on the CB freq jamming and I was
hearing this via his trans. of the 146.700 CB freq. with the Mute off. I
heard them blame him for the jamming and they kept it up for about 1
hour before I thought someone should tell them that they are wrong. So I
whent to 146.700 (something I haven't done in years) and told the three
ops that he wasn't the one doing this and one of your so called smart
repeater trustees told me I did not know what I was talking about
because this radio he was listening to was the same one he
finger-printed and that is his TM-733 (WRONG WRONG). Now as far as I
know and I hope that someone can help me on this but you can't talk to
someone on 440 and transmit on 2 meters at the same time and then also
let the person that your talking to on 440 hear what is going on. Again
I may be wrong because I have only been in the hobby for 13 years and
you may be smarter (HI).
So I beleave that if you had this solid proof you better give it to the
FCC and let them take care of it, but if not KEEP YOUR MOUTH CLOSED.
By the way you are not wanted on a few repeaters in Ri yourself, and I

know that because I own two of them and mine aren't the only ones RIGHT.
By the way the message you sent will be sent to N1JBC and I hope he has
the sence to file a suit, because if it was me I would see you in court.
Have a nice day and if you would like to keep this up I can tell
everyone reading this messages more about this great 146.700 CB freq.
like the autopatch and tring to call the state police....

-> fair amount of whining and moaning about the no-code license and how
-> the FCC took away "their" 11-meter band to give to those scum CB'ers
-> 38 years ago, etc. Thrilling stuff, no doubt! Certainly makes all
-> the young would-be hams want to throw away their keyboards and modems
-> and run right out to get a ham license.
->
-> -Drew in Sunny Central Florida-
-> KF4DDM

My friend. You do not know ham radio, amateur radio, nor any aspect of the service, which you slander so frequently. You are speaking from the lowest platform possible and yet profess to know things for which you are un-educated.

Make the trek to thru the classes, then speak from a position of authority. Perhaps you thought by getting your little tech plus license, everyone should be your friend and elmer. Suffice to say, that this hobby (service) is no different from any other. If you were a member of any other organization, you would have to meet certain requirements to gain respect and responsibility. It's just too bad that you spend most of your time, trying to figure out what you really want to do. Try another hobby, take up fishing, skateboarding or whatever. Find something that suits your fancy and go to it. Meanwhile, the ones who want to do ham radio will do so, with or without you, and nothing you say will change that.

Until you gain a measure of respect, which I doubt will ever happen, you simply are qrm on the band.

The best to you and your family and I hope you someday find something that will suit you.

The text of the RFD needs to be available, given the amount of
discussion on the topic. It should be posted as a "pre-RFD" so that
we can see what is being proposed.

(text of posting deleted)

The proponent, whoever that may be, doesn't have to wait for
"permission" to post the text sent to news.announce.newsgroups, which
is the moderated group involved. Post the text to the unmoderated
newsgroups with a clear statement at the beginning that this is not
the official RFD, but the text that has been transmitted for posting
as an official RFD.

I note, Jeff, that you have copied a May 1 date on your posting. That
is three weeks ago. Just how long has this RFD been lounging around
waiting for "approval?"

It's not a "technical term," but ham radio jargon. I doubt that any
ham can give a clear definition of "boatanchor," what it includes and
what it does not.

I have been a subscriber to the current "boatanchor" mail list for a
couple of years now, although I am don't have a "ham" license---and since
I worked for manufacturers of some of the devices discussed on that
list, probably lost my "amateur" standing some time ago. The term was
unfamiliar to me as a generic term for anything electronic until a few
years ago----we certainly did not call our products "boatanchors" when
we were designing, building, and selling them in the fifties and
sixties.

I recently purchased a couple of old shortwave recievers
(NC-188, SX-110, at the Dayton Hamfest). I thought that I
had seen in a book somewhere a frequency counter you could
build and put a small inductive pick up inside the radio to
indicate what frequency you are tuned to.

Do any of you have the scematic of a simple frequency counter?
It would need to cover 640 Khz to 30 Mhz. I thought I had seen
it in the ARRL Handbook, though I can not find it in mine (1996).
I would appreciate your help.

Thomas E. Hughes (hughest@ix.netcom.com) wrote:
: I have a problem that's giving me fits. I need to translate the German
: word "Grenzwellensender". The dictionary says "minimum-wave
: transmitter", but that sounds odd to me. Is it correct?
: The transmitter in question is used for local voice transmission at sea
: using frequencies in the 100 to 300 meter range (between HF and VHF).
: The literal translation of the German word "Grenzwelle" is "border
: wave" or "boundary wave".

The word 'Grenzwelle' originates from frequency beeing on the boundary
between long wave and short wave (boundary = Grenze).
In some publications the band 1.5 - 4.5 is referred to as 'Grenzwelle'
since it's rather close to longwave. Since part of this band was mostly
used by ships, i suggest to call it 'Marine Band', on my Sony
ICF 5500M (approx. 30 years old) the name of this portion of the HF
spectrum is called 'Marine' on the dial.
So a 'Grenzwellensender' is a station operating in the (former)
'marine band'.

> Model railroad designing

Actually, this was not an FCC proposal but a proposal from Radio Shack to make
new uses of the GMRS frequencies. Fortunately, Radio Shack did not request the
70 cm band. The original concept for this came directly from Radio Shack.

If you went to Dayton, could you share your stories with the rest of us. We are collecting bits and pieces from those you who've gone and putting them together for our Ham Radio Online web site. If you saw something of interest, please pass it along and we will edit into a compendium. Any new equipment? Interesting tech talks? Digital? ATV? SSTV? Microwave?

We thank you and the zillions of us who didn't make it, will thank you!

73, Ed, KF7VY

Although the MFJ piece is a nice VSWR meter, aside from helping adjust for a 1:1 match, it does nothing for optimization. Field optimization is a long painstaking procedure requiring a proper range, test antenna, source and acurrate calibrated (in dB) receiver. In addition, unless the range is a slant range your efforts may be in vain.
Bob Haviland's (sp?) quad handbook is an excellent starting point. Beyond that Brian Beezley's Antenna Optimizer will allow you to "build 1000's of quads in minutes using gain, F/B and VSWR for optimization goals. Start w/ the book then enter the models into the program.

All polls work in this manner. That's synonymous with the definition of
"poll." And those who peruse the results of such a survey know this.

Only by holding a gun to every licensee's head would you be sure of receiving
a response from the entire ham population. But that still wouldn't guarantee
that their response is an honest reflection of their thoughts.

So tell us, Jimmy, what's your model "in accordance with acceptable sampling
methodology" to determine how the North American amateur population feels in
regard to code testing?

> bull shit and you know it. If this ham is convicted it will throw the
> scanner law out the window as ham are concerned in the Commonwealth of
> Kentucky. You know (or should know) the RS 2 meter HT is not modifible

Not only will it affect the Commonwealth of Kentucky, but it'll affect
EVERY SINGLE ham in the entire Amateur Radio Service (including YOU).

DO YOU WANT THAT??? Do you want ham radio to revert back to being
scrutinized for each and every little thing we do by the local
communities???? It's bad enough there are local zoning restrictions,
covenants, and the FCC watching our every move (fortunately, the FCC
knows when to act, and when to stay out of the way).

> And with regards to the feds? I work for them (in a round about way)

And my brother (who's not a ham - yet!) and my dad (who's also not a ham
- yet) were BOTH in the MILITARY!!! Do you think THEY have something to
hide from the feds?? How about my other non-ham brother in Texas who's
attending BIBLE college??? Do you think HE has something to hide from the
all-mighty federales'???

> Sheesh

I couldn't have said it better myself, Tim. :-)

There was no other part of my message. My message only contained my
"paranoid" comment and Tim's fearful WARNING.

> > BTW, I do hope that ham with the HT is found innocent. My comment
> > had nothing to do with him.

> Could've fooled me when you sent the followup comment you did!! What's your

My note regarding the "paranoid" comment contained nothing regarding
the fellow with the HT - only the ridiculous WARNING.

> I suppose the next thing you'll say is that you *weren't* the one who sent

Pat, you're on drugs. When you sober up, go back and look at the original
message I sent - it only contained the "paranoid" comment and that stupid
"WARNING WARNING WARNING" crap. Nothing about the ham with the HT.

bruce@snoz.manawatu.planet.co.nz (Bruce Kingsbeer) wrote:

>Ask yourselves why there are no young people interested in ham radio.

Cost prohibitive would be my first guess. Second guess would be it requires some effort to get into - most 'young' people today are in the 'world owes me something' mode. Very typical of the 'internet set'. Read some of the business posting. A million internet users have a business that will make you rich with no effort required on your part whatsoever.

>Who wants to spend hours learning CW so you can talk to a bunch of
>old farts who's conversation skills end at the weather. Most young
>people would rather use the Internet which offers new technology
>and challenges and is progressive - something ham radio has not been
>since about 1920. (with the exception of the goodwork done by a
>minority of Hams in digital modes - AX25 etc).

Since you stated later in your post that you don't waste 'brain space' on CW, I am not sure where you get your information on who is talking about what with CW. Perhaps you are quoting Drew ?

A lot of hams are interested in the technology, not the conversational factor. When I was interested in building HF antennas, I wasn't doing it to see what marveous people I could find on HF to have stimulating conversations with - I was doing it because I wanted to see if I could construct a good antenna. I don't know if you realize it or not, but ham radio is a hobby that attracts a lot of very introverted people. A lot of these people would not be able to carry on a converstation *at all* with people they didn't know if they had to do it in person as opposed to behind a microphone or a key. The constant referals to the 'old farts' in these posting shows one thing - you are new to amateur radio. Apparantly you think amateur radio is what you hear in the U.S. every evening on 40 and 75 meters. Don't forget about the rest of the world. Wait for a sunspot cycle peak before you decide that everyone who is on HF is an 'old fart'. Sure, there are a bunch of old guys who are retired and use ham radio to keep in touch with their friends. Someday, if you are lucky and don't get run over by a bus, maybe you will use internet or ham radio for the same purpose - then you will be somebody else's 'old fart' if your theory is correct.

Bruce, Please give us all some examples of 'new technology and challenges' that the internet provide. I had a modem hooked to

a PC 15 years ago. Been there, done that. Computer programming
? Been there, done that.

>Its a sad reality that ham radio is controlled by its ageing membership
>who are clinging on to their past and are paranoid about change.
>In 10 years ham radio will be of historic interest only with no
>spectrum as this will be taken over by more pressing commercial
>needs.

Same thing was being said 20 years ago - hams were complaining
about 'tube' articles in QST instead of new 'hi tech' stuff. Ham
radio will never go away - there are too many people making money
from it for it to ever disappear.

Nobody is controlling you Bruce, Since you have a ham license
you can do anyting with the hobby that *you* want to do. If you
want to invent new a spread spectrum communications capable of
transferring digital data via a radio link at two megabytes per
second, go for it . Make an HF version and call it Bruce-Tor if
you want to. If you want to invent a new type of antenna with
more directional characteristics than a yagi or quad, go for it.

I think what you are trying to say is that you feel 'controlled'
because you can't get a no-effort Extra Class ham ticket.
It's called 'incentive licensing'. Been around for years.

>And yes I am a ham and I have no intention of wasting valuable
>brain space with CW, I would rather learn another programming
>langauge.

If the internet and computer programming are more interesting to
you than ham radio, I am curious as to why you bothered to get a
ham license ?

Try covering the entire ignition system (spark plug wires, coil
wire, etc) with some braid and ground it. If that doesn't work,
he could always buy a real car or pull of the side of the road
and turn off the motor when he wants to use the radio.

Not if it is relavant and of interest to others (severe weather, storm warnings, etc.) But the daily babble about "yeah, uh, it's gonna be a nice day today, too...probably rain this weekend...uh, it was pretty nice yesterday, too" gets broing after you've heard the same two OLDE FAHRTZ repeat the script about 200 times.

>For example, how are the CW portions of 80 and 40 split between cw,
>amtor, rtty, qrp, DX, etc.?

It may surprize you, but the CW portion is, as the name says
exclusively for CW (yes, morse code!). This does exclude RTTY, amtor
and the likes. OF course there is a "gentleman" agreement giving a
right-of-way for strong stations everywhere.

1677. Help - Dual Modulus Prescaling?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-22 00:00:00 UTC
From: iolair@usa1.com
Message-ID: <5167cc$a188.254@news2.usa1.com>
Source record: 224870

I have successfully built a frequency synthesizer using
Motorola's 145152 PLL chip. But I'm still mystified as to *why* the
darn thing (specifically, the 'dual-modulus' business) works! Why
should dividing the frequency by nine up to a certain point, and
thereafter by eight, suddenly magically increase the resolution of the
unit? I'm sure I'm missing something obvious, but I can't figure it
out.
A second question - are there any fairly common values for the
requisite low-pass filter that must follow the PLL's outputs? Cut-off
frequency? Does the op-amp need any gain (I suspect it depends on the
amount of frequency change vs. VCO input voltage).

Any help, hints or discussion appreciated....

>Richard

I too have received timely replies from the ARRL via email each and
every time I have sent them email.

Now... why would the ARRL have any info on a ham operating overseas in
the first place? Is this person a member of the League? Is this
person an ARRL accredited VE?

I operated in the Republic of Korea from Jun of 89 to Jun of 90 and
I bet they had no info on me other than the fact that I was an ARRL
accredited VE, over there, as well as a League member. Maybe you
might try asking them how to obtain a license in the country that this
U.S. ham is in and then try writing to someone at that address.

There is even an off chance that someone on the net may have some
knowledge as to how to retrieve the information you seek.

Try us...

Microwave at Dayton - definitely on the rise, and I don't mean the DSS cheater cards, I mean real hardware. For example, one surplus dealer had pulled an entire set of Narda directional couplers, and was selling them for only $25.00 each! These were pulled out of almost new equipment. He had a complete set - 1-2, 2-4, 4-8, 8-18 GHz, and had 10, 20, and 30 dB couplers in each range. These couplers looked brand new! I sell microwave components for a living, and almost bought the entire set from him for resale, but didn't because I only sell new components.

In the old days, we use to speak of 1296 EME with hushed tones, as it was some sort of black magic and was very expensive to get into. Lots of experimentation at 10GHz and up these days. Gunnplexers were selling like hotcakes.

in a nutshell...

-- [ From: clifford wiginton * EMC.Ver #2.3 ] --

NEW FORM 611K (Application for Amateur Radio Operator License)....Proposed

I. NAME: (check if alias)
_____________________________________________Alias......
II. ADDRESS: (optional)
_____________________________________________________
III.CITY,STATE:(optional..except ms.)
_____________________________________________

IV:Check ALL Applicable (check "exempt" if challenged)
A. I am aware of the function of ham radio
....OK ..........Exempt
B. I will transmit only on those bands which my equipment is capable
of operating on.
....OK ..........Exempt
C. To avoid interferance when transmitting with more than 24KW, I will
Announce that fact every 10 minutes.
....OK ..........Exempt
D. I will not listen to or attempt to transmit using a mode which is deemed
by many to be a waste of time.
....OK ..........Exempt
E. I will refrain from using language on the air which I disapprove of
(may include Spanish).
....OK .........Exempt
H. I agree to accept any incidental interferance on the band, or move to a
non-amateur band (except 11 meters).
....OK .........Exempt
J. Time permitting, I will obtain Some technical expertese before the next
renewal date of my license.
....OK .........Exempt
* ("F" & "G" left out to avoid controversial confrontations, "I" is anti-social)
**( At least one item must be checked or application may be delayed) ....OK
.........Exempt
***(morse code may be required or not, as desired)

V. CALLSIGN INTRUCTIONS:
A. Callsign will be issued by FCCA,ARRLZ, or Local Club, as appropriate and
will be completelly
randomized (see below for alternate procedure).
B. In lieu of above....You may choose a callsign of your choice(not to
exceed 8 characters).
Note: may operate on same freq. with someone with same call only with
permission.
```

C. Operator Class will have automatic progression...First day issued will be "Novice"
2 days to 1 week = "Tech or Tech+" as required.
1 week to 1 month ="General or Better" (except "Extra " class)
1 month = "EXTRA" ("extra" callsign must contain the letters "FRT" example: A1FRT)
D. License Information:
Callsign Desired .....(please print)
Date of Issue ..... (later than 01/01/1914)
Delivery .....US Mail .....UPS .....FAX .....Courier

I Certify that the above information is true so far as the Government is entitled to, and will not be devulged to my enemies, but under the Freedom of Information Act, will be freely distributed to my friends.
Signature.....(optional)

Upon Placing this Document in the Mail, the Callsign herein specified will be duly activated, and immediate operation is Authorized.....

THIS COULD BE A SOLUTION!!!!
(just joking fellers.....maybe we take things too seriously sometimes...good luck)

I see this is one of the problems with sharing the english language ;)

The intent of the search for information was to learn what a US ham would
need to do to legally operate overseas, not to locate or get info on one
already operating in a foreign country.

The East Pasco Amateur Radio Society (EPARS) group in Dade City has been running a Yaesu repeater on 146.28/88 since late last year. The performance of the machine has been excellant with the exception of problems with the duplexers. (lightning) The rated sensitivity is somewhat less that the GE/Motorola rigs used in the past, but I can't tell any difference. Anyone in the Tampa Bay area can work this machine mobile on 5 to 10 watts full quieting.

The controller card is 3rd party from N9EE in New Port Richey. A very nice product as well.

If you are traveling in Pinellas, Pasco, Polk, Hillsboro, Sumter, or Hernando counties, punch us up!

I've been trying to find out if there are any guidelines or recommendations regarding the installation of ham radio equipment
into a Volkswagen Passat (1996). All Volkswagen will say is that they don't recommend it and if anything happens, the
warranty will not cover it. This seems awful unfriendly!! Apparently VWs are never used as Taxis, police cars, or delivery
vehicles. Does anyone have experience with this or know someone at VW that might be able to make a recommendation?

Thanks,

Fred WA0GMH

Class A CB aka GMRS, is *still* a licensed service AND you have
to pay a fee for this service. Looks like they just re-invented
the GMRS Service.

Yes, I'm licensed for both GMRS and Amateur.

So what's the fuss about FRS??????

Well, it's time to put together another monthly column on Public Service ham activities for CQ VHF. Last month, the Skywarn hams in North Carolina set an example of preparedness and dedication: who's next?

You don't need to Save Civilization From Disaster to have a public service story that's well worth sharing. Don't worry about pretty words, just spell the names right. Everything's of interest: how you train, how you mobilize, how you schedule your operators, how you feed them and shelter them under field conditions, what you use for electricity, and what you'd do differently next time -- just for a start!

We're talking about anything that hams do for non-hams, whether it's communications for a parade or a marathon or whether it's only indirectly related to ham radio -- for example, if your club has ever offered a community program on electrical safety or computer/TV interference reduction, or if your club has ever done a blood drive or served dinner to the homeless or just done something to elevate the image of hams as contributors to their community.

No public service activity is "too ordinary" to be possible material for this monthly column, and photos are always welcome!

In the words of the plant in Little Shop of Horrors, "Feed me!"

Oh silly me...it seems I misunderstood Ben's message. It looked to me
as if he was trying to find information on someone else who is
currently operating overseas. Am I the only blunderhead who saw it
this way?

What he is actually looking for is information on how to obtain a
license in another country. That's what he stated to me in his
e-mail.

And Ben, Please try e-mailing your Section Management or Division
Directorship. I bet they'll help. But, make sure you phrase your
request so that it is not ambiguous. And, again...Good Luck!

Phonetic Alphabets (Alpha Bravo etc)
May 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 10th April. There are a
number of minor changes.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or specific references
where I have only second-hand information.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest. In the case of Web pages I ask that care be taken,
as it is easy to mangle something.

Following discussions last year this article is not now
posted to alt.usage.english. As of 10th April it is now
crossposted to various *.answers groups.

You may find a copy of this article and some other material
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms]

[UK police use Indigo(??) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
See also <http://aviation.jsc.nasa.gov/alphabet.html>,
which includes information about pronunciations]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase book for
Spanish speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway
Ontario/Ocean Pacific Quebec Radio Santiago/Spain Tokyo
United Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[See also <http://aviation.jsc.nasa.gov/old-alphabet.html>.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker

Cross-posted to: news.groups,rec.radio.amateur.misc

In <4nsus6$67k@doc.armltd.co.uk> dseal@armltd.co.uk (David Seal)
writes:

>No, rec.radio.boatanchors is *not* a better name.
>
>I'm perfectly happy to accept that "boatanchor" is a well-known term
>in the amateur radio community, and thus that it is OK to use the term
>once the context has been set by putting it in the rec.radio.amateur.*
>hierarchy.
>
>But I *know* that "boatanchor" is not a well-known term among people
>who are interested in radio in general. I've listened to thousands of
>hours of radio without ever hearing the term prior to this debate. I
>am certain that most people who are interested in radio in some way
>are in the same position. If you have to have this group at the third
>level, directly under "rec.radio", then you have to make the name
>comprehensible to most people who are interested in radio.

I was simply echoing a compromise that had been suggested before. Your
remarks, however, make a lot of sense.

We already have the same sort of problem with rec.radio.swap. The fact
that .swap doesn't lie in the rec.radio.amateur.* hierarchy confuses
many who are new to the hierarchy, and results in "for sale" and
"wanted" ads being posted elsewhere in rec.radio.amateur.*.

As a ham, the meaning of "boatanchor" is perfectly clear to me. I've
also heard the term used in discussions about computers, which is my
profession. In general, in the context of computing, a boatanchor is
in the eyes of the beholder. For some, it may be a true antique, like
and Altair or a CP/M-based machine. For those of us who live on the
"bleeding edge" of technology, it may mean something less than a fast
Pentium. I have also heard, and used, the term "doorstop."

>Use an insider's term like "boatanchor" in something like
>"rec.radio.amateur.boatanchor" which sets the context well enough to
>tell us who the insiders concerned are, and you won't get my NO
>vote. (Note that I'm not especially attached to "amateur": anything
>that restricts those still interested to people who will generally
>know what "boatanchor" means will do.) Or use a non-insider's term
>like "antique" in something like "rec.radio.antique", and again you
>won't get my NO vote. But use an insider's term like "boatanchor" in
>something like "rec.radio.boatanchors", and you most certainly will
>get my NO vote.

This is one thing that bothers me. We have people threatening the proposed [well, technically it hasn't been *officially* proposed yet] newsgroup with "no" votes for reasons that I have to question. But I respect your point, because you know what you're talking about, and you might actually visit the newsgroup occasionally. What I don't respect is those who would never use it [read: outsiders] but who would vote against it for whatever reason, such as the name.

>Basically, as far as I am concerned, the price of using an insider's
>term like "boatanchor" in a newsgroup name is that the name should
>also tell us *who* the insiders concerned are. This will save
>outsiders from having to puzzle out what the group is about; it will
>also save insiders quite a lot of incursions into their group by
>confused outsiders...

Excellent point; one of the best I've heard.

You could look at it another way...the young, technologically-advanced guys who realize it's 1996 are on the Internet. YE OLDE FAHRTZ, who live in the past and refuse to accept modern modes of communication are still making noises on the radio by tapping two pieces of metal together.

Comments on Kenwood TM 733A dual band mobile:

The bad:
Mic connector is plastic telephone type, breaks
eventually if you remove mic every time you leave car.
Designations wear off the standard microphone after a while.
Two antenna connectors, requires external duplexer. Not
a big deal to me.
Under some severe conditions, suffered intermod - but the
AIP function cleared it up pretty well. Using the UHF side
as a second VHF unit also got intermod.

The good:
Two antenna connectors (maybe you have two antennas).
Very compact size. Installed it in trunk of Mazda MX-6
with (expensive) remote cabling, fit well in tight spaces.
Almost all functions controllable from mic, usually without
looking (keeps your eyes on the road).
Resists idiots -- Tried to transmit at 50 watt level with
antenna disconnected - no damage.
Has lots of nice bells and whistles like crossband repeat,
remote control (from mic or from another radio), cloning,
PL search and capture, six favorite setups saved in memory.

In a phrase: I'd buy it again.

73, John KE6DTC

I will be travelling to Italy on holiday for the second half of June, and I will probably take my 2m handie with me. If anyone can give me any information about repeaters, bandplans, operating etc I'd grateful. I will be in Sorento, and if anyone wishes to arrange a sked I would be very pleased.

The first several series of 530's were able to receive 800 MHz.
However, when the FCC banned sales of radios that were able to receive
800 MHz, Yaesu changed either the E-Prom programming or removed some
components from the circuit board and effectively disabled 800 MHz.

1699. Re: beep after tx

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-22 00:00:00 UTC
From: Steve Butler <sbut-is@seatimes.com>
Message-ID: <Pine.SUN.3.91.960522110359.21048B-100000@seatimes>
Source record: 224892

Why do you want to transmit a beep after your speech? Easiest way is to get a repeater to listen in on your frequency and have everybody else listen in on the repeater's output frequency. The repeater should provide the beep shortly after you stop transmitting. Of course, not all repeaters are set up to do that so you might have to shop around for an appropriate repeater. That way you don't have to modify your rig.

> I would be most grateful for any clues, posted here or email.

"Grenzwelle" is the frequency range between medium wave ("Mittelwelle")
and short wave ("Kurzwelle"), named IMHO because it's on the border
between these two. The German word "Grenze" means border, boundary,
barrier or limit, depending on context. I would translate
"Grenzwellensender" as "maritime transmitter, 120m band".

Hope that helps,
Jens, DB9LL

1701. Need help for old Spartan radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-22 00:00:00 UTC
From: rew1550@tntech.edu
Message-ID: <1996May22.145102.20969@atlas.tntech.edu>
Source record: 224894

I have an old Spartan Shortwave/AM radio taht seems a little sick right now. As far as I can tell, it seems to be sending a non-varying signal to the speaker. Regardless of where on the dial it's tuned to, or what volume I have it cranked up to, it drones on with the same loud mono-tone hum. I've hooked it up to a different speaker and got the same results so I rulled out a simple speaker problem. I also replaced all the tubes to no avail.

This is an early 1940's model. Any one got any ideas as to what might be the cause of the problem? If so, let me in on them too.

Thanks,

David, I have been a ham for 40 years now and recall the use of the term 'boatanchor' referencing older gear (typically old military such as BC610, BC459, etc) back in the '56 time frame. Just because you have not heard the term does not mean that it is not used regularly and often. Perhaps you do not indulge areas and opportunities to learn of such things. Besides, why is it necessary to acknowledge people "interested in radio in general"? Those interested in the boatanchor mode know what they want and those who want to learn about the unknown term can do a quick read in the group and do so. If one is not interested in the subject he will never be bothered with the group in any event! Must everything be handed to you on a silver platter?

I have a problem that's giving me fits. I need to translate the German word "Grenzwellensender". The dictionary says "minimum-wave transmitter", but that sounds odd to me. Is it correct?
The transmitter in question is used for local voice transmission at sea using frequencies in the 100 to 300 meter range (between HF and VHF).
The literal translation of the German word "Grenzwelle" is "border wave" or "boundary wave".
I would be most grateful for any clues, posted here or email.

Thanks for listening.

: That outdated technology will still get through when none of the other
: technologies will. That's the primary reason that it's still a
: requirement.

Of course the military is the exception. For high command level (commander in chiefs) they dumped the outdated technology years ago and went to spread spectrum with computers running it. It's more reliable and is capable of transmitting extremely high speed when the other modes just can't get through. What do you think they'd run if there was ever a nuclear war, CW? CW doesn't get through, spread spectrum does.

I've been licensed over 17 years and do have CW. Even took my 20 wpm at the FCC office back in 79'. Today though I look at CW as a 'mode from the past'. It has it's place in this hobby, it's fun to do, but I lost interest in it entirely and havn't sent/received code in about 3 years or so, and I have no plans on using it again unless I get in the mood to 'step into the past' and try an ancient mode of communications. Then I'll enjoy it for nostalgic reasons, much the same way people operate AM, 160m, or some other mode of band. They certainly aren't efficient, it's more for enjoyment now.

1709. Apology and explanation - returned mail through the gateway

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-22 00:00:00 UTC
From: brian@nothing.ucsd.edu
Message-ID: <4ntpsr$fto@news1.ucsd.edu>
Source record: 224939
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Recently I've received a few complaints from people (and from cretins like Jeff Herman) about the various non-delivery mail messages that have come back through the info-hams gateway and gotten posted to this newsgroup.

The problem here is, as you might expect, a symptom of the growing pains of the internet. People are attaching all kinds of Email systems to the internet, and some of them don't work right.

Internet mail is sent via the SMTP protocol. Together, RFC821 and 822 (as amended by RFC1123) describe the mail exchange and headers that should be used. One particular item of note in these standards is that there are both AUTHOR and ERROR-RETURN addresses. And herein lies the heart of the problem.

When Email isn't deliverable, notification is supposed to be sent to the ERROR-RETURN address. There are many different kinds of mailers out there that don't understand the difference between the error-return address and the author address - although in the SMTP world they are quite distinct.

So when someone's new operating system is adapted to the internet, they use their existing mail system, and all is fine until mail can't be delivered for some reason - usually an employee retention problem, but for whatever reason, the mail can't be delivered, and they want to be nice and return it to the sender.

But they screw it up. They return it to the AUTHOR (what's in the mail header From: line) instead of to the ERROR-RETURN address. Or worse, as we've seen recently, they return it to not only the AUTHOR but also to all the people listed in CC:, To:, and other header lines. Sort of spewing it into the wind, as it were.

And so the non-delivery notification gets sent to the mailing list submission address, and from there posted to the Usenet newsgroup. And into your mailbox or newsreader, where it seems to drive some of you quite over the edge.

The gateway software does have some simple filtering in it, but it can't catch all the new and wonderful way in which some mailers are broken. As a new way comes up, we try to smarten up the filters, by adding new key phrases, From lines, or the like. But inevitably, something sneaks by, and a bunch of error messages get posted until we get the offending address unsubscribed and the filter smarter. Often, there's more than a day's worth of bounce messages stuck in the queue, so even

if we take care of it immediately, it's still going to spew a few.
I try to cancel them when I can.

So it's not a simple problem. I'm working on it, more or less all the
time. I think it runs pretty well, all things considered.

Sending me mail that says "stop posting this crap all over
the net" won't help. Filling my mailbox won't help either.

Please be patient.
- Brian

I got involved in this matter simply by posting the following:

Date: Wed, 1 May 1996 06:58:06 -1000 (HST)
From: Jeffrey Herman <jherman@hawaii.edu>
To: group-advice@uunet.uu.net
Subject: rec.radio.amateur.boatanchors

Dear Readers,
I've been informed of the discussion regarding the creation of a
new newsgroup dedicated to amateur and military vacuum tube radio
technology, and radio history.

I understand that those who approve new newsgroup names are questioning
why the name of "boatanchors" was chosen. Let me explain:
The amateur radio community (consisting of 700,000+ government-licensed
individuals in the US, plus millions more outside the US) has, for decades,
recognized the name "Boatanchors" as the proper title for the older amateur,
military, and commercial broadcast radio equipment. *All* radio magazines
worldwide similarly recognize and utilize this name in their articles.

I am one of the original members of the email list Boatanchors (now carried
@theporch.com), which, up until the beginning of this month, carried a
readership of over 900 subscribers (a $12/year subscription fee was
implemented at the beginning of this month, and we're now at about
550 subscribers). This list generatesat least 70 postings per day regarding
radio history (many members themselves participated in that history),
vacuum tube technology (our list contains many many experts in this
dying field) the engineering of military, commercial
and amateur radio transmitters/receivers from the early 1920s until
the end of the vacuum tube era (about the mid 60s). Even pre-vacuum tube
communications are discussed due to the list containing historians who've
specialized in this area.

Every member of the list knew full well the meaning of the term Boatanchors prior to going through the process of subscribing (who would subscribe to a list if they didn't know its content?).

It's very easy for me to predict that a new newsgroup titled
rec.radio.amateur.boatanchors
would *immediately* have a readership of well over 1000 participants.

Just as the present newsgroup rec.radio.amateur.homebrew might cause a non-radio person to first assume the group consists of beer-loving radiomen, a first reading of it would quickly show this is a *highly* technical group where even communications professionals hang out to discuss the building of radio equipment ("homebrew" = self-built). Similarly, "Boatanchors" would not take on much meaning to a non-radio enthusiast, but a first-reading would immediately explain the name.

Even as we speak, a CFV has been posted for a proposed new group called rec.radio.amateur.dx. Again, the term "DX" is close to every radio operator's heart around the world, but a non-radio reader wouldn't know DX if it came up and bit him.

As I peruse the 8000+ newsgroup names in my newsreader, I am perplexed by the tale names of already-in-existance groups; but usually a group's prefix name indicates the major catagory area of discussion. The prefix rec.radio.amateur is a very strong indication to *anyone* the content of that group - no confusion can result from such a thoroughly discriptive prefix.

In conclusion, speaking for the entire amateur, military, and commercial radio front, I very much hope you will agree to the name rec.radio.amateur.boatanchors for our proposed new newsgroup. I promise you will not be disappointed at the outcome!!

Sincerely and Respectfully,
Jeffrey Herman

Nothing wrong with talking about the WX guys. Around this time of the year you can expect to hear traffic regarding hurricanes, tornados, flooding, wild land fire weather reports, thunderstorms, hail storms, high temperature health traffic; many of these folks will be in direct contact with the National Weather Service.

Yup, nothing wrong with talking about the weather.

>Their subject
>matter also consists of such interesting topics as their health problems
>(geriatrics, colostomy bags, etc.),

I'll bet your non-ham grandparents talk about their health, too. Most old folks do that.

>and usually a fair amount of whining
>and moaning about the no-code license

Got to balance the whining coming from the no- and low-coders wanting all of HF, you know.

>and how the FCC took away "their"
>11-meter band to give to those scum CB'ers 38 years ago, etc.

You were the first to bring this topic up this year. Newsline gave a report about the Family Radio Service up on 460 Mc, and immediately you jump in reminding us of our 11M loss. Again, *you brought it up*.

Think of 11M as a gift, Drew: It's an HF band that we've given to you folks in which no knowledge of the code is necessary - you can operate AM or SSB to your heart's content!

Why is it you never respond to my posts correcting the misinformation you spew, Drew?

Now Dreugh,

I suppose the white heads in sunny sweltering Fla do as you state above, _but_ here in sunny Dry Aridzona, the OTs talk of youthful pursuits and grand things. Not boring, but learned passages which can impart knowledge on those that dare to care. I haven't heard any locals discuss mundane subjects such as the 11 meter band for years. These subjects are best left undiscussed as they merely bring back memories of a kinder, gentler time.

Of course, we don't have the privelege of your wisdom, gained thru hours and hours of self adulation and newspeak learning.

Once again truth and science win out over dumb luck!

I'm curious how well the digital modes are able to work in that region
of 40M where the foreign broadcasters live. Any problems at all?

As young-pup novices rockbound on 40M, we'd use the broadcasters in place
of a BFO. Our novice net met about 1 kc from Radio Moscow. News, music,
and code all at the same time!

Hi Ted, you need to hit the return key a little sooner. But besides that,
if 50% of programming was being conducted in punch cards, then I'd suggest
to you to learn to work with cards. Since about 50% of the HF QSOs are
conducted in code, I *do* suggest you learn Morse.

QST de W1AW
DX Bulletin 26 ARLD026
From ARRL Headquarters
Newington CT May 23, 1996
To all radio amateurs

SB DX ARL ARLD026
ARLD026 DX news

This week's bulletin was made possible with info provided by CT1ENQ, CT1EEB, CT1FUF, the Northern Portugal DX Group, Hamad, 9K2HN, Gary, NH2G, Frank, AH0W/OH2LVG, Uwe, DL9GOA, Bob, DL7VOA, Ted, NH6YK, Ramon, XE1KK, and Contest Corral from QST. Thanks to all.

MIDWAY ISLAND, KH4. Bill, NH6D, is still on Midway and will be active in the WPX contest this weekend. He will also be concentrating more on 160 and 80 meter work. Hams in W6, W7 and JA lands may catch him on RS12. His primary purpose for being on the island is US Navy business, so time for DXing is limited. QSL via KL7H/W6.

ANNOBON ISLAND, 3C0. Teo, EA6BH, plans to return to Equatorial Guinea and operate from this island, too.

TUNISIA, 3V. Listen for YT1AD operating from 3V8BB May 23 to 30.

SENEGAL, 6W. N2WCQ/6W1 will be active until May 29. QSL via PA3BUD.

NEPAL, 9N. 9N1KY should remain active until sometime in July.

COMOROS, D6. DL4XS, DL6ET and DL3KDV plan an all band effort, including 160 meters, from August 22 to September 4.

ETHIOPIA, ET. Peter, ET3BN, has been on 20 meter RTTY, usually from 1800 to 1900z on 14085 kHz. QSL to PO Box 150194, Addis Ababa, Ethiopia.

MEXICO, XE. Ramon, XE1KK, has put a beacon on 50.0225 MHz, located in grid EK09ik. It is reportedly the only such beacon in the first call area of Mexico. XE1KK/B runs 20 watts to an omni-directional antenna. Listen for T T T DE XE1KK/B EK09. Ramon welcomes reception reports.

MINAMI TORISHIMA, JD1. JG8NQJ/JD1 has wrapped up operations but will return for a three month stay starting July 15. QSL via JA8CJY.

JAN MAYEN, JX. LA7DFA is active on 14008 kHz CW signing JX7DFA. Listen for his 20 meter RTTY from 1000 to 1400z Fridays.

COCOS KEELING ISLAND, VK9C. Bill, VK4FW, will start working 12 meters at VK9CT on May 24 around 0200z. He will run 400 watts to a vertical. QSL via VK4CRR.

CHRISTMAS ISLAND, VK9X. Gerben, PA0GAM, will activate VK9GA May 23 to 27, with plans to work 80 through 10 meter CW. QSL via PA0GIN.

DODECANESE, SV5. Manfred, DL8SET, will be QRV June 6 to 20 on 20 to 6 meter CW and SSB. QSL via DL8SET.

CORSICA, TK. Falk, DK7YY, ex DL7UTA, will be active as TK/DK7YY through May 30. He will be in the WPX contest using 100 watts to a vertical. Before and after the contest he will concentrate on the WARC bands, and if conditions permit, 10 meters.

TOGO, 5V. Roy, DL7UBA, and Lars, DL7ALM, will be QRV from June 3 to 18. They hope to obtain the calls 5V7HR and 5V7ML, respectively, on all bands, CW and SSB. QSL via home calls.

GUAM, KH2. Gary, NH2G will operate Single Operator All Band in the WPX contest from Guam.

SAINT KITTS, V47. Jimmy, W6JKV, and Mike, K6MYC, will arrive on the island the night of June 29 and depart on July 9. They plan to operate EME on 50.144 and 432 MHz. Six meter sporadic E is also on their agenda, as well as two meter E-skip to Europe with their EME array.

DOMINICAN REPUBLIC, HI. Frank, DL5PV, is on 17, 20 and 30 meters signing DL5PV/HI7. QSL via DL5PV.

THIS WEEKEND ON THE RADIO. The CQ WW WPX CW and CQ Vikings contests, and the World Telecommunications Day CW are all this weekend. For more info on the WPX contest check page 97 of March QST, page 100 of May QST for the other events.

The problem is we have heard from a couple of long time foreign hams
(one in the UK), that they had never heard the term 'Boatanchor' before.
It should be noted that the term 'dx' in r.r.a.dx is universal in Ham
use, world wide.

<snip>
>For the "rec.radio.boatanchors" name, such people are going to be

OK. So either change the name and resubmit the RFD, or submit the RFD with a note that you wish to stick with the original name. Continuing to beat this dead horse with no RFD is pointless. If tale refuses to approve the RFD with "boatanchor" in the name, that's a different issue, and we're not there yet. ("I am not pleased with the name." is not the same as "I will not accept your RFD.".)

While I'm using bandwidth on this issue, I want to add my voice to several others and point out that calm statements of fact are likely to be more effective in getting the group passed than ranting. The people who are offering you advice are not out to get you; they are trying to help. If you explain why you believe that your chosen name is better than alternatives, people will listen; if you insult people they'll just get mad.

>reason to communicate with such a crowd!
Hal- I can certainly understand your feelings. However, don't be too quick to throw away the work you have already done. I can assure you that you can find just about group that you want on Amateur Radio. I know where these spots are that feature profanity, arguing, bickering, etc., and avoid them.
I'm not much of a CW operator, but I can truly say that I've never heard any profanity on CW. Also, don't throw the keyer away. I watched my son zip through a fill in the blank 20 WPM code test when he was 9 yrs. old.
As a retired educator, I can say that Amateur Radio is the most educational and rewarding hobby that I have ever seen.

>Ted F.
>N3SQY

We agree that the airwaves are a limited resource.

I maintain that given the degree of limitation and the extent of the demand, all that desired a piece of the airwaves would create a situation of anarchy if no legal criteria and enforcement existed to determine the use. Those standards may not make either one of us happy, but if my awareness of human nature is anywhere close to correct, it sure beats the alternative. We can beat around what form of intellectual currency or or how much long green it should take to gain entrance to the "eletist" club, but I find, among those I associate with, the grey cell currency is preferable.

I do not think or support the line "if I had to do it so do you". I only maintain that some equivalent form of selection and enforcement process should be required to maintain a usable resource for public use. The cw requirement, in my opinion, is as good as any. If you can find another way that is just as effective and egalitarian, does not deprive me of that which I earned, and can replace the cw requirement; so be it. If you wish to give the resource to all wannabes, you will find me at the barricades, in opposition.

Remember; there is not enough lunch to go around, if everyone is going to eat.

(Follow-ups set to news.groups only on this one, as it is getting very much into general issues of newsgroup creation and away from the specific naming of the boatanchors group.)

jmlowman@ix.netcom.com(Jim Lowman) writes:

>This is one thing that bothers me. We have people threatening the
>proposed [well, technically it hasn't been *officially* proposed yet]
>newsgroup with "no" votes for reasons that I have to question. ...

It's probably worth saying that such "threats" are a fairly standard part of the newsgroup creation process, and are usually meant to help the proponents judge the strength of the opposition. I.e. they're saying "This isn't just a minor improvement I'm suggesting. Take this objection seriously - it is something I regard as a serious flaw with the proposed group and that I suspect a lot of other people will too." (The last part is implied because an individual NO vote isn't generally going to affect the outcome significantly.)

>... But I
>respect your point, because you know what you're talking about, and you
>might actually visit the newsgroup occasionally. What I don't respect
>is those who would never use it [read: outsiders] but who would vote
>against it for whatever reason, such as the name.

I'm afraid that if you mean that literally, you're out of touch with the realities of newsgroup creation. I suspect though that you mean something a bit looser than what you've actually said - let me trry to explain:

To take an extreme example, if I saw a group proposed called "sci.joe-bloggs.is.an.idiot", I would vote against it because of its name, regardless of whether I was interested in *ever* discussing the subject of the group (presumably whether Joe Bloggs is an idiot). This is because I know enough about the what "sci" hierarchy is about to know (a) that "joe-bloggs" is not a sensible subcategory; (b) that the subject doesn't belong in that hierarchy anyway. By a literal reading of the criterion you've just expressed, I'm an outsider who shouldn't be voting on it because of its name (or for any other reason)...

My attitude towards this is that if I know a reasonable amount about the subject of a hierarchy, I am competent to vote NO based on the next name component; if I don't, the most I should do is ask questions about it. In this particular case, I feel I know enough about radio in general to feel competent to decide whether something is appropriate

directly under rec.radio.*, but not enough about amateur radio to know whether something is appropriate under rec.radio.amateur.*.

In short, I feel that what should control whether someone feels competent to vote NO on a group for name reasons is how much they know about the hierarchy the group is being placed directly under, not how much they know about or are interested in the actual group.

The HTX-202 can NOT recieve or transmit out of band. I'm not even sure it is MARS/CAP compatable! Check for back issues of CQ VHF. They printed an article about scanner laws. In the article, it said that the FCC issued a ruling that exempted HAM radios from scanner laws across the US. I have a copy of the reprinted statement from the FCC somewhere in my truck just in case.(of course, I'd have to FIND it first)

Following provided for your info. I disagree with a previous person who said no more letters should be written. This is plain misleading and a disgusting slam against legal, licensed, ham radio operators.

Just so happens there is an article about interference in the June 1996 issue of QST, page 75.

From the June 1996 Ladies' Home Journal, page 86 - Consumer News--How Long Should It Last? Cordless phone was one of five products. Article in total on cordless phone:

"Cordless Telephone:
This type of phone lasts about five years. If you keep the batteries charged, and don't damage the antenna or punch the the buttons too hard, you can get more mileage from your phone, says [Lisa] Fasold of CEMA [Consumer Electronics Manufacturers Association]. There is little you can do about static, except to report those who cause it--illegal airwave users, such as amateur radio stations--to
the FCC."

Hey there Ron thank you for your input on the situation. You are correct in all reguards. It appears that this person kd1hz still has no sense of what the hobby is really about. It is about having fun. Well for Mr. MPD's information I have a 220 machine on the air and soon coming a 440 machine, both of witch he is not welcome on. I will personally shut him off. Further this MPD is not allowed on the quahog repeater network. That is from myself and the rest of the trustees. So if kd1hz stays on his own machine it will make life a lot easier for everyone. Have a good day.

Sounds like getting on HF was more important to you than learning all that theory -- that's OK by me, but since you made the choice voluntarily I'm not sure why you bother to tell us what you -could- have learned instead of "wasting" your time. BTW, the best way to improve speed for most people is to operate on the air, and since the presumed purpose of getting a General is to get on the air on HF most of the time you say was wasted could have been spent doing what you apparently want to do anyway -- communicating on HF.

Anyway, now that you're on HF you can continue learning that RF theory and practice the best way possible -- by hands-on experience and experimenting. At some point everybody has to put down the books and actually make something if they want to learn about RF theory. And you might have a lot of fun to boot.

>There are all sorts of freqs on the HF that particular modes migrate
>to. Does anyone have a list?

>tnx, Niel - WA5VLZ
>nielw@ix.netcom.com

Niel, I don't recall ever seeing any 'gentlemen's agreements'
about HF, although certain modes will be found on/around certain
frequencies. Amtor on the high bands, if I recall correctly is
around .075 from the bottom of the band, i.e., 14.075. HF
packet can be found around .100 up from the bottom of the band,
i.e., 14.100 etc. RTTY around .060 or .065 (somebody on RTTY
corrrect that if it's wrong. There is also a slow scan TV freq
on the 20 meter phone band, but I don't recall that freq either.
For the most part the digital stuff stays in the upper region of
the CW part of most of the HF bands.

Hope that helps,
Jim KH2D

Yaesu removed some components. If your FT-530 is from Lot 33 or later
you do not have those components installed, thus no 800 MHz receive
capability even with the extended receive mod.

My FT-530 is after the Lot 33 vintage (you can tell by looking at the
serial number). I was able to find and install the board allowing
recovery of the 800 MHz receive capability in the 530. I have no
interest in listening to cellular but my radio now does nicely for
902-928MHz reception.

It took me 5 minutes. The FCC would not allow any longer test time. It also took me 5 minutes to fail the sending test. :-)) But seriously.. I used the AMECO records way back when and listened to W1AW several time a week. After a few months I qualified for the 15WPM ARRL code proficiency award during one of the qualifying rounds. FCC really did flunk me on the sending test. I don't think the Detroit office examiners will ever forget me !! Back then the test was not comprehension like today's exams. So I guess you'll have to take that with a grain of salt.

If you read what I wrote, in context, the moral righteousness I feel is relative to EARNING the privileges that accompany the licence I was tested for. For you to suggest that I said or implied there is some form of moral righteousness in learning the code, is blatant deceipt.

I did take a liberty when I implied others have a feelings of moral righteousness relative to the license they earned. I know of no one that received a license and voiced a position that they did not deserve it.

I have no problem at all, admitting that earning something gives me a moral claim to it. If that is elitist BS, and it offends you, so be it. My standards are not set by the lowest common denominators of humanity.

I trust your reading comprehension will improve before I have reason to question your literacy along with your motive for an ad hominem attack.

It was involuntary, if I wanted to get on HF VOICE.
Learning CW was a WASTE of time. Learning RF theory would have been
MUCH more benficial that being forced to learn a dead language, CW.

>I'm not sure why you bother to tell us what you -could-
>have learned instead of "wasting" your time.

Because there are a lot of old farts here who like to complain
about "whiners" who are to lazy to learn CW. Well I learned CW
and still don't like it, don't want to use it, and feel my valuable
time was wasted. I want HF voice priveledges. CW is irrelavent and outdated.

>BTW, the best way to
>improve speed for most people is to operate on the air, and since the

Thanks for the tip, Roy. I have one of those clocks put away
that DOES have the extra segements on the first digit. Now if
I can just find it.

BTW, I bought a couple of large digit Radio Shack clocks for 24 hr
use that had a switch on the back for 24 hour mode. Most do not,
however. These look great in the shack.

>So.....
>Where do we discuss these radios today?

As of right now, here or in .homebrew or .equipment. Unfortunately, the real opposition to the name 'boatanchors', comes from people who are only slightly involved, or simply fail to realize what we are trying to accomplish in the creation of the newsgroup. A full majority of the potiential readers have full-knowledge of what the term 'boatanchor' means - this is *not* a problem!

Neither is the argument that somehow the term 'amateur' necessary in the name of the newsgroup, since some percentage of the boatanchor crew are not hams.

These arguments are the pedantic wailings of people who have nothing else to do with their time but bitch and snivel and drag their feet!

I say, to hell with it! The name is 'rec.radio.boatanchors'...the charter of the group will explain the rational of the name as well as the purpose, so lets just ignore the detractors and get on with the vote!

>
>True, other hobbies require you to learn things. I had to learn physics to be a good
photographer -- it's useful in the profession.=
I had to learn a lot to become a computer professional. Everything I've learned I use
almost every day. Can that be said of code? L=
et's face it, it's no more than a "rite of passage". If we want to make the tests tougher,
great. Include some really useful theory =

and practical operating technology, etc. Contrary to what some people think, there aren't great hordes of unwashed heathens beating =
down the doors to "break into ham radio". Most people I meet don't even know what it is. In QST magazine the observation was once made, if you were to stand outside any major sports stadium and hand out free Extra-Class licenses, 99 out of 100 people wouldn't know what there were. The other person probably wouldn't be interested. NOW before you go and flame me for "dissing" the hobby, please note that I'm only making a (mostly) valid observation. Next time you get gas or talk to anyone you've never met before try it out, Ask, "What is Ham radio?" (as students ask me).
BTW, no one has qualified in our county for our radio club's high school senior scholarship for several years (qualification -- be a licensed ham --- period!)

If he's expressed his displeasure, it certainly has not been where I
could see it.

We are working with 0% facts and 100% opinions here. It's up to the
proponents to get the facts in front of the interested people. Get a
draft of the charter, etc. out here where we can see it and discuss
it. If the news.announce.newsgroups moderator is simply sitting on
this proposal---and I see some indication that there is a long queue
of stuff that is waiting for him to post it----then post the draft
material sent to him giving the date it was sent so we can at least
see what we've been talking about the past three weeks.

So I suppose you feel that use of the airwaves is an EARNED right to be granted by the standards of on elite few. You must also belive that driveing is a privelege(sp). I guess if you live in a city where there is good public transit, that is fine. For those who live in the boons, try to catch a bus. The point is, the airwaves are a limited resource and should be carefully watched, but, who is to judge what the standards are for that access. It's not the FCC, they just enforce(laugh laugh) the rules. I guess that leaves the ham community. And, on the whole, I have seen the majority of OLDER and WISER hams to be elitest snobs. The attitude of "I had to do it so should you" is self defeating. My professors had to progam with punch cards, but, they didn't require that I use punch cards to learn programming. Punch cards are outdated. Gee, I hope an emergency doesn't pop up that requires a good punch card operator!

1758. GB2RS News 26th May 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-23 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <832908309snx@llondel.demon.co.uk>
Source record: 224776
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 26th of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The AMTOR Mailbox GB2RS service on the HF Bands has had to be suspended because GM4EMX, who provided this worldwide service, is no longer able to do so. Our thanks to Kit and RSARS for their work, and if anyone else is in a position to take this on, GB2RS manager GI8AYZ would be delighted to hear from them.

Also required urgently are an 80 metre main newsreader for the GI service, and reserve readers in the Midlands to assist G3KQF and G4AFJ with their 2 metre SSB and FM broadcasts.

There are empty slots in Scotland also. Reserve newsreaders are needed for the Orkney, Elgin, Fort William, and Shetland 2 metre FM services, and to cover the Shetlands on 80 metres and the Aberdeen area on 2 metres SSB.

Anyone wishing to offer their services should contact GB2RS Manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book.

From Sunday the 16th of June, the Tyne/Tees area GB2RS 2 metre FM broadcast will be at 9.00am instead of 10.00am. This broadcast is from the station of G0IID, with G4OLK as the first reserve newsreader, and is on 2 metres channel S21.

From today, the 26th of May, a new GB2CW slow Morse broadcast will be available on Sunday mornings at 11.00am on 3600kHz. The operator will be GI3USK. Continuation of the broadcast beyond a trial period of one year will be conditional on there being a demand. Anyone using the broadcast is therefore urged to write to GI3USK stating their Morse practice requirements. His address is correct in the RSGB Call Book. It is hoped that this transmission will help to meet the national need for slow Morse broadcasts on HF. Once again, the new broadcast is on Sundays at 11.00am on 3600kHz.

The RSGB's Repeater Management Group is now easier to contact thanks to the introduction of a new national helpline phone number. If you require information or help in any repeater matter and have not been able to contact your Zonal Representative, please ring 0956 708873 and your call will be directed to one of the RMG Committee Members. The service is available from 9.00am to 9.00pm, seven days a week. The number again is 0956 708873.

The RAIBC in Northern Ireland regrets that, due to circumstances beyond its control, it will not be organising the Belfast Rally in June this year. The group thanks all those who attended the rally in previous years for their support.

And we have received notification from RadioSport Limited that, due to other commitments, they have reluctantly decided to cancel the Stafford Amateur Radio and Computer Show. The Stafford show was scheduled for the 16th and 17th of August.

Now some items of HF DX news from the weekly RSGB DX News Sheet:

From the Cocos-Keeling Islands, the Oceania DX Group is now signing VK9CT and should continue until the 31st of May. This is a change to the callsign given last week. The station is on all bands, CW and SSB.

From the Shiant Islands in Scotland, which count as EU-112 for the RSGB IOTA Awards, GM0DEQ and GM0SEI were planning activity from about the 25th to 29th of May, depending on the weather.

And from Tunisia, YT1AD was planning a return visit to the 3V8BB club station between the 23rd and 30th of May.

Now news of a special event station operating next weekend:

On Sunday, the 2nd of June, GB4BKF will be on the air from the Basingstoke Kite Festival at the Down Grange Sports Complex in Basingstoke. All HF bands and 2 metres will be used. The event is open to the public and talk-in will be available on 2 metres channel S22.

Next the Rally News:

The Plymouth Radio Club annual radio rally is taking place this weekend, the 25th and 26th of May, as part of the club's Carnival Weekend at Tamarside Community College near St Budeaux. The rally features the usual traders and the carnival will be of interest to all family members. The club will be running GB4PLY on all bands, and special QSL cards will be sent to all stations making contact with them.

The East Suffolk Wireless Revival takes place today, Sunday the 26th of May, at the Maidenhall Sports Centre, Ipswich, in Suffolk. The event features a bring and buy and car boot sale, a vintage radio display, Novice stall, a rig 'clinic' and antenna testing. Talk-in is on 2 metres channel S22.

Next Sunday, the 2nd of June, the Spalding Amateur Radio and Computer Fair will be held at Springfields Exhibition Centre in Spalding. For further details, call 01775 722940.

The Northern Mobile Rally, organised by the Ripon and District Amateur Radio Society, takes place at a new venue - Ripon Racecourse - next Sunday, the 2nd of June. The event features the usual traders and a bring and buy stall. Doors open at 11.00am, or 10.30am for disabled visitors, and talk-in will be on 2 metres channel S22 from 9.00am onwards. For further details, contact Gerald Brady, G0UFI, on 01765

640229.

The 2 metre FM repeater near Llandrindod Wells in Powys, GB3RA, closed down temporarily on the 20th of May. The group is planning to re-open the repeater from a new site. Further information can be obtained from the repeater keeper William Cook, GW0KQX.

The Coventry ATV repeater, GB3RT, which operates on channel RT1-2, returned to service on the 13th of May. It had been off the air for maintenance since the 22nd of April.

Now for the HF contest news:

The CQ WPX CW contest is taking place this weekend, and continues until 2400 UTC tonight, Sunday the 26th. This contest is on all bands from 160 to 10 metres, excluding the three "WARC" bands. Work any station and give an RST report and serial number.

Next weekend, the 1st and 2nd of June, the RSGB National Field Day takes place. The contest runs from 1500 UTC Saturday for 24 hours, CW only, on all bands from 1.8 to 28MHz, excluding the "WARC" bands. All groups participating should have registered by the 9th of April. The rules are in the September 95 RadCom.

Next some VHF contest news:

The first session in the RSGB 10 GHz Cumulative contest is taking place today, the 26th, between 0900 and 2100 UTC. The rules are in the March 1996 RadCom.

Next weekend, the IARU 50MHz Contest takes place from 1400 UTC on the 1st of June for 24 hours. The RSGB's 50MHz Trophy contest takes place during the first eight hours of the IARU Contest.

And now the solar factual data for the period from the 13th to the 19th of May, compiled by Neil Clarke, G0CAS.

Solar flux levels declined slightly from 72 units on the 13th to 69 units by the 19th, and averaged 71 units. The 90-day solar flux average on the 19th was 71 units, the same as last week. X-Ray flux levels declined from A2.4 units on the 13th to A1 by the 19th and averaged A1.3 units. Geomagnetic activity was mostly "unsettled" until the 18th, but on the 19th activity declined to "very quiet" levels, with an Ap index of 1. The average for the period was Ap 9 units.

Now the ionospheric data for Central France. The period from the 10th to the 16th saw levels decline to 6.2MHz by the 13th. By the 15th they had increased to give the highest daily figure so far this year: 8.7MHz. The following day they declined slightly to 8MHz. The darkness hour lows declined from 3.5MHz on the 11th to 2.7MHz by the 15th, but then increased to 3.6MHz by the 16th. The daytime highs took place between 1800 and 2000 hours, except on the 13th, when they were at 1000 hours. The average was 7.2MHz. The darkness hour lows took place between 0200 and 0400 hours, and averaged 3.2MHz. Two short periods of blanketing E

took place on the 11th and the 13th.

And lastly the solar forecast. The quiet side of the sun is expected to be looking our way, and the solar disc is expected to be spotless on most days. Solar flux levels are expected to remain in the high 60s. Geomagnetic activity is expected to be at "quiet to unsettled" levels throughout. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. However these levels could be exceeded on some days. The darkness hour lows are expected to be about 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Delta and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Alfa series.

How many times do I have to read messages from hams that send a "Thank You" addressed to ALL. When one seeks help and someone takes the time to respond, the least the receiver of help can do is send a simple individual reply for thanks. After all-the respondents to this call for help responded one by one. I have received up to 75 messages in a call for help and sent individual thanks to each. It was very time consuming, but it was the right thing to do.

Would you at your wedding, if you were the groom, get up at the end of the reception and yell out, "Gee, Thanks everyone for the gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to respond to someone who H E L P E D you.

Mitch, WA4OSR, owner of Vibroplex Company, gave me permission to post the following. Let's please get his bug returned to him.

Jeff KH2PZ

==========

From: Mitch, WA4OSR <wa4osr@cris.com>

stolen at dayton from the vibroplex booth, an elaborately engraved vibroplex square brass racer, serial number 101000, with 'Mitch"
engraved on the top of the vertical block... the key is gold plated, and is obviously very unique... anyone who has any information about
the key please contact me at the address below... no questions asked... i just want my key back...

Ronald Bouthillier <ronald.bouthillier@chowda.com> wrote:

>I would like to see this, because I know more of what has happened then
>you think.

Its more apparent that you don't "know" anything. You've merely swallowed the N1JBC "I'm just a poor little blind boy! They're picking on me" line; hook, line, and sinker.

>I think he may know more then you think and I beleave more then you

I can't parse this sentence.

>without making SLANDEREST REMARKS AND DEFAMATION OF CHARCATER witch is
>unlawful.

Well at least we know what orifice you are talking out of. I'll give you a free clue: slander and libel are not criminal (hence, unlawful) actions, they are civil (tort) actions.

>I would also like to know how you can legally band him from
>a repeater, I may be wrong but you and the 146.700 group don't own the
>freq.

A "repeater" is a piece of private property. The FCC has clearly indicated that Part 97 allows a repeater trustee to limit access to his/her machine.

>If I am wrong Mike I would like to know how you can do that
>because I know someone that I would like to have this so called letter
>to stop a Ham from useing the freq..

Write to the ARRL's regulatory affairs office and ask for a copy of the FCC letter from the CLARA case a couple of years ago.

>Let me tell you something about your so called jamming. I was talking to
>N1JBC one nite on 440Mhz and there was someone on the CB 146.700
>repeater at the same time he was useing the TM-733 to talk to me
>because he needs that radio to get into this repeater. At the same time
>he was talking to me there was someone on the CB freq jamming and I was
>hearing this via his trans. of the 146.700 CB freq. with the Mute off. I
>heard them blame him for the jamming and they kept it up for about 1
>hour before I thought someone should tell them that they are wrong. So I
>whent to 146.700 (something I haven't done in years) and told the three
>ops that he wasn't the one doing this and one of your so called smart
>repeater trustees told me I did not know what I was talking about
>because this radio he was listening to was the same one he
>finger-printed and that is his TM-733 (WRONG WRONG).

Last time I knew Mike wasn't a control operator on 146.70, and he's the only person I know of that has both RF fingerprinting and doppler DFing equipment all rigged to run off a laptop in the back seat of his Ford Explorer. Of course you wouldn't know this because your buddy Barton didn't know about it either until he had been caught with his proverbial pants down.

>Now as far as I
>know and I hope that someone can help me on this but you can't talk to
>someone on 440 and transmit on 2 meters at the same time and then also
>let the person that your talking to on 440 hear what is going on. Again
>I may be wrong because I have only been in the hobby for 13 years and
>you may be smarter (HI).

Doesn't take a genius, only someone with two radios at their disposal that doesn't overload the front end of the other. Someone with say a mobile radio and an HT.

All you are describing are typical N1JBC "blame deflection" tactics. He uses them regularly to attempt to create "alibis" for himself. Even Judy KC1RI caught him red-handed doing this once.

>So I beleave that if you had this solid proof you better give it to the
>FCC and let them take care of it, but if not KEEP YOUR MOUTH CLOSED.

My understanding is that copies of everything were sent "through channels" - the ARRL OOC for RI then dropped the ball and "befriended" the Barrington Bandit in an attempt to "convert him" rather than doing his job of getting jamming scumballs off the airwaves. So much for rules enforcement and going through the system.

>Have a nice day and if you would like to keep this up I can tell
>everyone reading this messages more about this great 146.700 CB freq.
>like the autopatch and tring to call the state police....

You mean the time one of Jed's buddies in Coventry kept entering the state police emergency dial number? Please continue with your 146.700 "Channel 19" stories as we always can use a good giggle.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z MAY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 MAY AND FORECAST FOR 24 MAY - 26 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 22 May
Daily Proton Fluence >1 MeV: 6.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.8E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 May 25 May 26 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 May: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 22 May
Learmonth 6 3321 1111
Fredericksburg 6 8
Planetary 5 6

Observed Kp for 22 May: 2111 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
24 May 8 Quiet to unsettled
25 May 6 Quiet
26 May 5 Quiet
COMMENT: Field had disturbed character early in UT day, then
became quiet.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
23 May Normal Normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
24 May Normal Normal Normal
25 May Normal Normal Normal
26 May Normal Normal Normal
COMMENT: Degraded HF communications may have been experienced
early in the UT day and during local night hours for mid to high
latitudes.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
23 May 10

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for May: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
24 May 10 near predicted monthly values
25 May 10 near predicted monthly values
26 May 10 near predicted monthly values
COMMENT: Spread F observed during local night hours. Local night
enhancements observed at some stations. Degraded HF communications
may have been experienced during local night hours.

charles copeland (charles1@netcom.com) wrote:
: This is a survey to determine the average time it takes one
: to learn 13wpm CW. I've heard people claim 2 weeks to 2 years.

: Took me one year.

I learned it compliments of the USN off paper tape machines circa 1970. I think we had 4 hrs/day for either 2 or 4 weeks - the other 4 hrs/day was for touch typing. Anyway, was up to 18wpm code and 70wpm typing at the end, but it was a real challenge. I heard code coming from the steam pipes in the barracks echoing in my head and my fingers built up muscles punching those long-travel keys on the TTYs.

IMO, the computer method is impossible to beat - you get instant feedback on mistakes and the computer can compile statistics and drill you on the characters you miss consistently. I think if we'd had the computer training, the time could have been cut by 70-90% - same goes for touch-typing.

The Navy cut out the code requirement for RM 'A" school a year or so after I went through. Six years later, only 3 of us could be found to sit a NATO CW net out of a department compliment of 120 Radiomen on a carrier! Unfortunately, this hard-won skill has atrophied to the point where I'd have a hard time passing the 5wpm (10 years in the Navy burned me out completely on HF). But I'm confident that if I needed it again, one of the computer programs could get me back up to speed in just a few days.

Hi Ron, if you want to be like the military, why not join up for a
4-year stint. I bet you're one of those guys who wears camos and
has assult weapons!

The lucky military has billions of dollars to spend on their comm
systems which results in their communications being practically immune
to *anything*. To compare us with them is ridiculous.

Hams mode of choice is voice. How much voice traffic is still being
passed on the military circuits?

(Keep in mind that voice is just about as old a mode as CW. Hence, if
CW is archaic, then so is voice.)

1781. Extended RX for Yaesu FT-2200??

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-23 00:00:00 UTC
From: jthompso@nermal.santarosa.edu
Message-ID: <4o0duv$5pi@floyd.santarosa.edu>
Source record: 224830

Hi,

I just bought a Yaesu ft-2200 and am wondering if there is any way to get extended receive (aircraft) for it? In the manual it tells about pressing two buttons and turning the radio on to get it. I tried this but did not work. Did I get one of those radios that do not come equiped with this feature? Or is there another way to do this? Please help as I would really like to be able to extend the freq range.

Thank you
Please reply to:
hd233@cleveland.freenet.edu (if you write after Thursday, May 23)

Thanks again..

I've tried this on a number of clocks. Usually, grounding the right pin of the main I.C. (found by trial and error) through a 1k or so resistor will change the I.C. output from 12 to 24 hour format. But none of the clocks have the additional segments necessary to make a "2" for the first digit.

: -Drew in Sunny Central Florida-
: KF4DDM

-- Drew, why, if you despise old technology so much, would you even want
to pursue a century-old mode of communication like RADIO, when you
have your "vastly" superior Internet to communicate with?

You young, technologically advanced guys, don't require HF or VHF
radio to use the internet, so why worry about it?

If the "old farts" want to keep CW mandatory for HF, what difference
does it make to you? You young, technologically advanced guys, who
realize it's 1996 will be too busy on the internet to pursue amateur
radio anyway.

After all, you wouldn't want to live in the past, by using ancient
modes of communication like "radio". I guess, by being a century
old, "radio" is an "old fart" too.

>a repeater, I may be wrong but you and the 146.700 group don't own the
>freq. If I am wrong Mike I would like to know how you can do that
>because I know someone that I would like to have this so called letter
>to stop a Ham from useing the freq..

>Let me tell you something about your so called jamming. I was talking to
>N1JBC one nite on 440Mhz and there was someone on the CB 146.700
>repeater at the same time he was useing the TM-733 to talk to me
>because he needs that radio to get into this repeater. At the same time
>he was talking to me there was someone on the CB freq jamming and I was
>hearing this via his trans. of the 146.700 CB freq. with the Mute off. I
>heard them blame him for the jamming and they kept it up for about 1
>hour before I thought someone should tell them that they are wrong. So I
>whent to 146.700 (something I haven't done in years) and told the three
>ops that he wasn't the one doing this and one of your so called smart
>repeater trustees told me I did not know what I was talking about
>because this radio he was listening to was the same one he
>finger-printed and that is his TM-733 (WRONG WRONG). Now as far as I
>know and I hope that someone can help me on this but you can't talk to
>someone on 440 and transmit on 2 meters at the same time and then also
>let the person that your talking to on 440 hear what is going on. Again
>I may be wrong because I have only been in the hobby for 13 years and
>you may be smarter (HI).
>So I beleave that if you had this solid proof you better give it to the
>FCC and let them take care of it, but if not KEEP YOUR MOUTH CLOSED.

>By the way you are not wanted on a few repeaters in Ri yourself, and I
>know that because I own two of them and mine aren't the only ones RIGHT.
>By the way the message you sent will be sent to N1JBC and I hope he has
>the sence to file a suit, because if it was me I would see you in court.
>Have a nice day and if you would like to keep this up I can tell
>everyone reading this messages more about this great 146.700 CB freq.
>like the autopatch and tring to call the state police....

>Ron N1OLF

>---
> * SLMR 2.1a * It's only a hobby ... only a hobby ... only a

Couldn't you girls take care of this via private email ? I doubt
seriously that the whole world cares about repeaters in New
England.

>newsgroups with a clear statement at the beginning that this is not
>the official RFD, but the text that has been transmitted for posting
>as an official RFD.
>
I assume that the "permission" that was mentioned is that of the
news.announce.newsgroups moderator. As the proponent for
rec.radio.amateur.dx, I had a fair amount of difficulty getting the
RFD posted to news.announce.newsgroups as the group-advice folks
(David Lawrence and others) did not like the name. It was recommended
that the group be called "rec.radio.amateur.long-distance" as this was
felt to less obscure than "dx". I replied that I disagreed that the
two were synonymous and that the term "dx" was understand by all
amateurs, including non-English speakers, and better reflected the
group's true intent. Based on that discussion, some minor modifications
in the RFD were recommended (specifically defending its proposed name)
and the RFD was finally posted.
I'm surprised, given my experience with the DX group, that the
proponent for the boatanchors group is encountering so much difficulty.
While namespace "purity" does seem to be a fixation among the
group-advice people, they did respond positively to reasoned
arguments defending a group's prospective name.
Posting the RFD to unmoderated groups "unofficially" can only confuse
matters. It may turn out that the RFD eventually posted in news.announce.
newgroups is not the same as an earlier draft. The "official" RFD is
supposed to be the basis for discussion and potential modification.

Well Steve, why would he have voiced his displeasure with the group's
name if he hadn't received the RDF?

1793. Re: FCC Creates New CB Service (FRS) on 462 MHz Band

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-23 00:00:00 UTC
From: teacherjh@aol.com
Message-ID: <4o1fks$7is@newsbf02.news.aol.com>
Source record: 224842

It seems to me that the FRS is a =good= thing. First of all, the airwaves belong to the public... not to the government. The role of government is to manage (as little and as well as possible) this scarce resource... but simply keeping it FROM the public is not good policy. I was (and still am) in favor of CB... it is too bad that the source of frequencies made it too easy to destroy the band with high power.

The VHF and UHF bands don't have the propagation charactaristics of 11 meters, so damage should be limited geographically if it gets out of hand, and "illegal projects" (which, IMHO, should be legal) like beams etc could actually serve as a good intro to radio, from which licensed amateurs (with their LOTS of extra privs) will sprout.

I would allow five watts, and would allow beam antennas (roughly the same area would be covered, but more use would be garnered from the radio)

[ANARTS - Australian National Amateur Radio Teletype Society]

[I have asked these people several times to SINGLE SPACE their
reports - I have not the time, nor indeed the inclination, to
to it for them. VK2KFU]

ANARTS BROADCAST 909 19TH MAY 1996.

Australian National Amateur Radio Teleprinter Society,

which includes all digital modes, with the weekly broadcast

on the following frequencies:

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD COL

7.045 MHz -3 0030 UTC VK2CTD COL

14.070 MHz (amtor/fec) 0030 UTC VK2DPM ALAN

14.091 MHz 0030 UTC

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

A.N.A.R.T.S. News Bulletin 909 19TH MAY 1996

page 1

COLS COLUMN.

ONE OF THE STATEMENTS ANARTS MAKES IN EACH BROADCAST IS

'INCLUDES ALL DIGITAL MODES'. WHEN YOU THINK OF IT MOST OF THE

MODES WE USE OTHER THAN VOICE ARE DIGITAL IN SOME RESPECTS.

TAKE FOR INSTANCE CW. WE HAVE EITHER A DOT OR A DASH, THAT IS

EITHER A 1 OR A 0. THE SAME WITH RTTY, WE HAVE EITHER A MARK

OR A SPACE, THIS APPLIES TO AMTOR AND OTHER VARIANTS OF RTTY.

I'VE BEEN READING THE HISTORY OF THE EARLY MODES OF TELEGRAPHY

AND IT SEEMS TO ME THAT THE PRINCIPLE OF A 1 OR A 0 APPLIES
QUITE A LOT. THE EARLIEST RECORDED MENTION OF A TELEGRAPH
SYSTEM USING THE PRINCIPLE, THOUGH AT FIRST GLANCE IT WOULD
NOT APPEAR TO DO SO, IS THE FOLLOWING. IN 1753 A LETTER
APPEARED IN THE 'SCOTS MAGAZINE' WRITTEN BY AN ANONYMOUS
AUTHOR. IT WAS TITLED 'AN EXPEDITIOUS METHOD OF CONVEYING
INTELLIGENCE'.IT DESCRIBES A SYSTEM IN WHICH WIRES RUN BETWEEN
THE TWO POINTS OF COMMUNICATION, ONE FOR EACH CHARACTER TO BE
TRANSMITTED. THAT WOULD BE QUITE A FEW IF ALL 26 ALPHA AND 10
NUMERIC CHARACTERS WERE INCLUDED. EACH WIRE WAS TO BE
TERMINATED INTO A PITH BALL WHICH WOULD LIFT A SMALL PIECE OF
PAPER WHEN AN ELECTRIC CURRENT WAS APPLIED TO THAT PARTICULAR
PITH BALL. THE CURRENT WAS SUPPLIED BY A FRICTIONAL ELECTRIC
MACHINE, A STATIC ELECTRIC DEVICE.
THE OPERATION WAS SIMPLE, AS EACH CHARACTER IS TO BE TRANSMITTED,
THE APPROPRIATE WIRE IS TEMPORARILY CONNECTED AND THE PIECE OF
PAPER IS LIFTED. WHEN THAT CIRCUIT IS DISCONNECTED THE PAPER DROPS
DOWN INTO ITS OWN SPECIALLY DESIGNED BOX. THE RECEIVING OPERATOR
NOTED EACH CHARACTER AS THE PIECES OF PAPER WERE LIFTED AND
DROPPED AND WROTE DOWN THE MESSAGE.
TO BE CONTINUED
THATS ALL FOR THIS WEEK 73S TO ALL DE COL VK2CTD.

WEEKLY SOLAR AND GEOPHYSICAL REPORT
(10 MAY - 16 MAY)
ISSUED ON 17 MAY 1996
SUMMARY
Date 10 11 12 13 14 15 16
10cm 77 76 73 72 71 70 71
A 7 5 5 14 14 10 (10 ESTIMATED)
T 13 14 13 23 18 10 10

SOLAR ACTIVITY WAS VERY LOW DURING THE PERIOD, EXCEPT FOR 12TH MAY WHEN ACTIVITY WAS LOW.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 10TH TO 12TH MAY, BECOMING UNSETTLED ON 13TH. THE FIELD WAS UNSETTLED TO ACTIVE 14TH MAY, REDUCING TO QUIET TO UNSETTLED 15TH AND 16TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE 15 TO 30 PER CENT ENHANCED 10TH TO 11TH MAY, NEAR PREDICTED VALUES, ON 12TH, THEN ENHANCED TO 40 PER CENT 13TH AND 14TH, THEN NEAR PREDICTED VALUES ON 15TH AND 16TH. SPREAD F WAS PRESENT ON 12TH.

FORECAST (17 MAY - 23 MAY)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED UNTIL 20 MAY. UNSETTLED TO ACTIVE CONDITIONS EXPECTED 20-21 MAY DUE TO A CORONAL HOLE.

UNSETTLED LEVELS EXPECTED 22 TO 23 MAY.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH DEGRADED HF COMMUNICATION CONDITIONS EXPECTED FOR MID-HIGH LATITUDES 20 TO 21 MAY.

COURTESY OF IPS RADIO AND SPACE SERVICES

DX BULLETIN NO. 254

MAY 13, 1996

THANKS TO THE NORTHERN OHIO AMATEUR RADIO SOCIETY, NORTHERN OHIO DX ASSOCIATION, OHIO/PENN PACKETCLUSTER NETWORK, N6EK, N8AC, W9JOO, AH0W/OH2LVG, DF4RD, DL7VOA, DL9GOA & DX NEWS LETTER, F6AJA, G4BUE & DX NEWS SHEET, GM4FDM, HS0/G3NOM, PA3ERL, PA0GAM/YB3AQE AND SM0OEK FOR THE FOLLOWING DX INFORMATION.

5X4F LEAVES UGANDA. DUE TO INCREASING SECURITY PROBLEMS IN NORTHWEST UGANDA, PAUL, 5X4F, LEFT UGANDA APRIL 25TH. PAUL WILL SPEND THE NEXT 4 MONTHS IN THE US VISITING FAMILY AND FRIENDS. HE AND HIS WIFE PEGGY, 5X4G, HOPE TO RETURN TO ARUA IN SEPTEMBER.

9H, MALTA. NODXA MEMBERS AND FRIENDS FROM BERLIN WILL ONCE AGAIN BE ACTIVE FROM 9H. OPERATORS AND THEIR CALLSIGNS WILL BE: TOM/DL2RUM/9H3VP, RAGNAR/DL7URH/9H3VJO, TOM/DL7UTM/9H3/VN, HOLGER/DL7IO/9H3TY, AND BIRGIT, DL7IQ, USING 9H3TZ FOR THE YL CONTACTS. 9H3 CALLS FOR DL7UEA AND DL1YFF ARE TO BE ISSUED LATER.THE 7 TEAM OPERATORS PLAN TO BE ACTIVE IN THE CQWW WPX CW CONTEST ON MAY 26TH AND 27TH, FROM THE FANAL LIGHTHOUSE ON GOZO.

9M0, SPRATLY ISLANDS. JAAN, SM0OEK, CURRENTLY ACTIVE AS 9M2JJ IN MALAYSIA, IS THINKING ABOUT GOING TO PULAU LAYANG LAYANG (WHICH IS ONE OF THE ISLANDS IN THE SPRATLYS). PLANNING IS IN THE EARLY STAGES AND JAAN IS SOLICITING HELP FROM LOCAL HAMS IN MALAYSIA AND ANYONE THAT CAN PROVIDE INFORMATION TO GET THIS DXPEDITION AFOOT. JAAN CAN BE CONTACTED VIA INTERNET: SM0OEK'PC.JARING.MY

KH4, MIDWAY KH4. BILL, NH6D, IS ONCE AGAIN GOING OUT TO MIDWAY ISLAND (KH4), LEAVING HONOLULU ON THE EVENING OF MAY 16TH FOR AT LEAST ONE WEEK. BILL WILL BE ACTIVE ON ALL BANDS, SSB/CW; 80/160 METERS AT 22:00 LOCAL MIDWAY TIME. IF POSSIBLE, HE WILL STAY ON THE ISLAND FOR CQWW/WPX. BILL ALSO PLANS TO PUT A LOT OF EMPHASIS ON EU/AF QSO'S THIS TIME AROUND. QSL VIA KL7H/6.

VK9, CHRISTMAS ISLAND. GERBEN, PA0GAM WILL BE HERE AS VK9GA FROM MAY 23-27TH. HE WILL BE ACTIVE ON 80-10 METERS CW. QSL VIA PA0GIN, GEERT HEEMSTRA, NOORDERKROONSTRAAT 16, 9742XD GRONINGEN,

NETHERLANDS.

XX9, MACAO. THE DXNS REPORT THAT MARTIN, AA1ON/G4DZC, WILL VISIT MACAO IN THE MIDDLE OF MAY ON HIS WAY BACK FROM A BUSINESS TRIP IN THAILAND. HE WILL TRY TO BE ACTIVE.

YO, ROMANIA. JEAN, F6AJA, WILL BE HERE AND ACTIVE AS YO/F6AJA DURING HIS FREE TIME (THIS WILL NOT BE A DXPEDITION, BUT HE WILL USE YO8FZ'S STATION DURING HIS STAY.), FROM MAY 20 TO 25TH.

ZF, CAYMAN ISLANDS. JUST A REMINDER! MIKE, W5ZPA -- DXAC REP FOR THE DELTA DIVISION -- WILL BE ACTIVE FROM GRAND CAYMEN AS ZF2PA, MAY 19-25TH. QSL VIA W5ZPA.

>as BC610, BC459, etc) back in the '56 time frame. Just because you
>have not heard the term does not mean that it is not used regularly
>and often. ...

Agreed - with the proviso that it is used regularly and often *in
amateur radio circles*.

>... Perhaps you do not indulge areas and opportunities to
>learn of such things. ...

And perhaps I do, but happen not to have "indulged" in this particular
area - not unlikely even if I do learn about new areas frequently,
given the vast number of areas of human knowledge that I could pick.

Before this goes any further: let's avoid this sort of comment,
please. Trying to infer each other's intelligence, curiosity, or just
about anything else from a lack of knowledge about one specific area
is ridiculous...

>... Besides, why is it necessary to acknowledge
>people "interested in radio in general"? ...

Because they are the people that the "rec.radio.*" hierarchy is going
to attract.

For the "rec.radio.boatanchors" name, such people are going to be confronted with "boatanchors", with no further context. Most of them are not going to understand it.

For "rec.radio.amateur.boatanchors", the problem goes away. This time, the next thing that people interested in radio in general will see is "amateur", which most of them will understand. And then the people left over are those who are interested in amateur radio, and most of *them* are going to understand what "boatanchors" means.

>... Those interested in the
>boatanchor mode know what they want and those who want to learn about
>the unknown term can do a quick read in the group and do so. If one
>is not interested in the subject he will never be bothered with the
>group in any event! ...

Unfortunately, the real world fact is that not everybody on Usenet behaves this way. Even well-named groups get the occasional "What's this group about?" posting; put difficulties in the way of someone understanding it and you'll get a lot more of them, plus all sorts of misunderstandings.

>... Must everything be handed to you on a silver
>platter?

Again, this sort of comment is uncalled-for. But to answer it in its own terms: there are enough people on Usenet who *do* need things handed to them on a silver platter that it is worthwhile at least using a platter. (Note that this is *not* an insult to any individual, or even to the vast majority of Usenet readers. If just 0.1% of Usenet readers misunderstand something and react inappropriately, you've got thousands of people causing problems, and probably hundreds more coming on-line every month...)

Drew,

All amateur radiuos that operate above 30 Mhz are Type Approved as
scanning receivers only Under FCC Part 15. The transmitter is not
checked as it only must comply with part 97 rules. . If a radio can
scan into piloce frequencies even though its not what you or I might
call a " scanner ' the law still applies. new jersey did just the
same thing for several years.

1797. Morse Code key question

My father gave me an old Morse Coding key that I wondered if anyone could tell me anything about. It is a Les Logan SpeedX model 500. It is in its origional box and appears to be unused.
Are these keys still in use ? what might it be worth ?
Any information would be appreciated. You can email me at the address shown below.
Thanks, Dave

Doesn't it bother anyone that the right of an individual to listen
to whatever he chooses has been rescinded? This used to be one of
the things our government claimed set us apart from the now-defunct
Soviet Union. First it was microwave transmissions, now police
communications. What's next, the SW bands?

Anybody know of a source for these connectors ? (9 pin tber base).

I added a outboard VFO (VFO-530, works fine FYI) and ended up using tube sockets with long pieces of wire stuffed in holes to make the female-female connection.

I would really love to find the correct plugs and "do it right".

That was confirmed to me by a Tandy executive (who helped beta test the HTX-202)
right after it came out. In fact that was said to be one of the 202's strong
points -- since its front end wasn't so wide, it would be less susceptible to
intermod from land mobile services and the like.

No, but that reminds me of a couple of odd intermixtures of amateur and other services on TV and the movies:

- An episode of The Munsters where Herman gets involved in ham radio and ends up contacting someone who he believes is on Mars -- but is actually some kid in the neighborhood, playing spaceman with a Part 15 walkie-talkie.

- The first Die Hard film, where the crooks are carrying Kenwood TH-x1AT HTs (not sure which band) which somehow are able to work with both the LAPD's radios and a GE CB set in a limousine!

You definitely can't stop someone from using a given frequency, but a repeater's licensee darn well CAN stop anyone he wants from using the repeater.

I can copy about 15 wpm right now, although I've not taken any
tests to prove it. It took about a year to get from 0 to 15 wpm,
listening to tapes and computer generated QSOs for about 15 minutes
a day, 5 days a week.

Congradulations on your start. I wish you good luck.

> ... But mostly, I love to learn."

An excellent motivation. It is also refreshing to hear.

> Once I get my No Code license, I look forward to "learning" more and
> studying code.

Good luck here as well. I'm sure you will get lots of good advice
here if you ask for it. I took the same approach you did. I had
been interested in Amature Radio since High School but couldn't get
past the code. The NC-Tech got me into the hobby and I was able to
meet several good Elmers. With their instruction I got my Tech +
and am now working on getting past the 10 wpm plateau.

Again, good luck,
73

>people will listen; if you insult people they'll just get mad.

Just to add one further point: if you choose to resubmit the RFD with
a note to David Lawrence that you wish to stick to the original name,
it would probably be worth adding a brief explanation to the RFD of
why it is a good name. I.e. make it clear that the term is in frequent
use in amateur radio circles, and that it applies to equipment which
cannot be adequately described by any other term. *Don't* include any
comment about "outsiders", etc.: sensible outsiders will know from the
explanation alone that this is something they're not competent to
judge, and non-sensible outsiders will only be infuriated by such
comments...

Then make certain your note to David Lawrence points out that you have
added a section on the naming of the group - which will make it clear
that you have listened to and responded to his comments about the
name, rather than just ignoring them.

>
>If the standard is better than 99.9% understanding than I don't see how
>any name can ever be chosen for any group.

Fortunately, it isn't. The words "and react inappropriately" are
important in what I said. It's more like 99.9% doing one of the
following:

* Understanding.

* Not understanding, and reacting appropriately - e.g. by reading the
group for a while or deciding that they won't bother anyway.

* Misunderstanding, and still managing to react appropriately -
e.g. by realising that there is a possibility that they have
misunderstood and double-checking by reading the group.

Given the large number of lurkers around, it is highly likely that
most people who misunderstand or don't understand won't cause
problems. So in practice, I would reckon that a name that achieved 90%
understanding would certainly be fine, while one which got less than
50% understanding would probably not be. Where the boundary lies in
between is anyone's guess...

MP>>FCC and let them take care of it, but if not KEEP YOUR MOUTH CLOSED.

MP>My understanding is that copies of everything were sent "through channels" -
MP>e ARRL OOC for RI then dropped the ball and "befriended" the Barrington Band
MP>in an attempt to "convert him" rather than doing his job of getting jamming
MP>mballs off the airwaves. So much for rules enforcement and going through the
MP>stem.

I find that hard to beleave, or maybe you did but they didn't find solid proof of your Allocations. Only someone know that in the 70 group.

MP>>Have a nice day and if you would like to keep this up I can tell
MP>>everyone reading this messages more about this great 146.700 CB freq.
MP>>like the autopatch and tring to call the state police....

MP>You mean the time one of Jed's buddies in Coventry kept entering the state p
MP>ce emergency dial number? Please continue with your 146.700 "Channel 19" sto
MP>s as we always can use a good giggle.

Lets talk about 1R and others and know that.

Now this is getting good Mark. No lets talk about the time I was on my way home from Boston about 7 years ago (and I don't even think you had a lic. at the time) when I saw a accident on I-95 at 2am and I was a

member. I tried to use the autopatch to call the State Police and was dumped by someone saying that I shouldn't use the autopatch that way, I should make a general call to see if someone could call for me. Now I know and I think you know that if there is a accident you want to be able to do the talking to the Police not go through 2 or more ops. Since then I haven't been on that freq and don't care to be. Now if your going to say something like that you sure as hell better know what your talking about before you open your mouth.

Source record: 224666

Mark lets keep this private we don't have to send shit like this all over the world. AGREED ??

Now we both know that 146.700 needs a lot of help and by doing what Mike did isn't helping it at all. I think and I believe that you know that all has to be proved and you shouldn't start saying things like that without justification. If one person has this it should be used with the FCC not like this and you know that.

Now as far as you accusing me of the jamming the 70 freq by bringing up the autopatch that is wrong and dam well know that. Don't just say something to say it. I own two repeaters here in RI and I don't care to use the others, I don't need to I have all the toys that 70 has and I don't charge for it. my users can access the autopatch for free as long as there are no toll calls. I also have the finger-print hooked up to the repeater with a lap-top and I find it to work OK thats it.

The only thing N1JBC ask for is help in picking out a good repeater that he would buy and put up. He already has a 220 up and has the 440 pair already. If you and others don't want him on the 70 repeater you should leave him be and let him use his own repeaters but some of the 70 group just like to start trouble and you know that. So instead of helping this trouble start you shoud be a concerned ham and tell Mike to leave things alone and not to start more shit like he is trying to do.

From the previous message about the TM-733 you know I am right about the transmitting on the 2 meters and 440 at the same time. Now people like that say thing to others and they all beleave it, and that starts more shit and you know that is wrong. Its like me saying that you come to my two repeaters and jam them up all the time, you know I am going to get someone to beleave me and then that person is going to get someone to beleave him and so on. See how things happen. The big thing is that I am not defending JBC I don't think that the message was called for and I think you know that. If he has jammed the repeater i think it should be taken care of the right way not by talking bad about someone in messages going all over the world, I think you should agree with that ?

the big question is that now that N1JBC don't go to the 70 repeater is all the jamming gone (NO) and has anyone blamed him for the jamming that is going on now (YES) that is wrong because they ASSUM that it is him and it makes others beleave that person. the matter should be dropped and let go but persons like Mike just keep it going to make trouble and that is wrong, am I right ??

Now I am not sayiong that all the users on 70 are have bad operating prictices but there are many of them that do and the club has lost many

members because of this and you know that. i myself was a very hard member of 70 many years ago and helped with all the public service events fathfuly every year till the repeater got so bad that it wasn't worth the money to use the repeater anymore. Now you know that I am not the only one, take a look at the persons that where there before and the ones that are there now ZGG, 1B, 1Z, GCT, 1E, 1N and family (5 hams), 1X, and many others, and some of them got such a bad tast in there mouth with ham radio by being on 70 they don't even get on the radio anymore. I know you have seen this happen if you been on a long time. there were even members that would give all the new users a hard time about the way they came on the repeater instead of helping them with the right practises of ham radio, now that is WRONG WRONG WRONG. Also when two or more Home stations are in QSO that are able to go to simplex without any trouble they stay there tring up the best coverage repeater and making the mobiles move to another repeater , that is WRONG the repeaters are there mainly for low power radios that can't QSO via simplex ie: HT's and MOBILE radios. Well I don't believe I am right about everything but you and Mike are
not right also. I think we would like to get the same thing out of the
hobby but it will not come from what Mike and others are putting out
over the world.
The bad thing is that the only person that is getting hurt by this is
someone that isn't even bothering with the 70 repeater and don't wish to
so all the persons talking about him should stop and let it go and find
others that are doing the jamming now and stop blaming JBC for
everything that happens on 70 that they don't like.

I hope you can see my point of view.

Quite agreed, and I feel that the original posting and the thread that
have followed have made quite a hash out of things.
>
>There is no legitimate gripe with David Lawrence unless you've chosen
>option 2 and he has *refused* to post the RFD.
>
I have no reason to believe that the scenario of option 2 and a
refusal to post has occurred.

I feel dismayed that after nearly a month of discussion, we still
haven't seen any description at all of the newsgroup being proposed,
and note that I have seen none of this discussion in either the
boatanchors mail list or on rec.antiques.radio+phono, two areas that
might have readers who would make meaningful comments on an RFD and
provide support and votes for a suitable proposal.

Attacking Lawrence and group advice is not the way to go about things,
unless they are refusing to allow the RFD to be posted. So far as I
know, this has not happened. Indeed, I wonder if there exists, even
now, a suitable draft RFD for this group. It wouldn't surprise me to
find that there are problems other than the name of the group.

Help!!!!!!

I have a Pontiac Transport that I would like to place an antenna to work with an HR-2510 27 mHz range. The only antenna's that I have tried so far are the "Radio Shack - through the window type" and a small highly loaded window clip on. Both have a very low bandwidth and short 2-3 mile range.

I know that all magnetic mounts are off because the only exposed metal are the lug nuts. " I could get 4 Wilson 1000's and mount them on the flat side on each wheel and look like a Roman Chariot Racer"

Anyway, does anyone out there have any Ideas or Experience with this plastic problem.

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur

I would to get interest in opening a new news group and listing it
under the name of

"rec.radio.amateur.repeater"

I feel that there is enough inforation that floats around in the other
news group that could be put into a repeater news group of it's own.

What is everyone thoughts on this.

If you like the idea, let me know with a vote for it. The more
responce I get the more chance I will have in getting the news group
added.

Thanks

I'm not the one who brought the subject up to begin with.

> You can't do that and demean a someone without proof of what you say. So
> if something is said make sure you have proved it first because it could
> make you spend a lot of time where you don't want to be..

Are you completely clueless? Do you have any understanding of the difference between a civil and criminal action? Repeat after me: Libel and Slander are Civil actions. Libel and Slander are Civil actions.

> Your right THE REPEATER NOT THE FREQ, Think about it
> QUOTE:: (deleted for brevity)
> THIS IS WHAT SHOULD HAVE BEEN DONE, NOT WHAT YOU ARE DOING....

I haven't done anything. However, information was mailed to WA1ZGG, the ARRL OOC for Rhode Island, regarding Mr. Barton's jamming and repeater hacking activities. The OOC ***DID NOTHING*** about it, except "take him under his wing". Boy that's really great an OOC befriending a jammer. That makes me warm and fuzzy all over.

> If this letter was sent to N1JBC and was proven true, I don't think he
> would have a Ham Lic. anymore ....

Oh clueless one: the letter I referred to was a letter sent by Jim Johnston of the Private Radio Bureau of the FCC to an attorney representing CLARA (a repeater group in Calif.). In that letter Mr. Johnston states that existing Part 97 regulations allow repeater trustees to ban users from their repeater. This is exactly what was done to your "poor little blind boy". If you doubt the letter exists contact the ARRL regulatory affairs bureau for a copy.

> i don't care what he has in the back of his truck. The point is that I

As far as I know the only people in the state of RI that have "transmitter fingerprinting" equipment are Mike (kd1hz) and Bill Torrissi (ka1jnp). Was the person you spoke to either one of them? Somehow I doubt it.

> Good then do something, you just don't say things and send them in

Something was done, and the system that is in existance failed.

> I find that hard to beleave, or maybe you did but they didn't find
> solid proof of your Allocations. Only someone know that in the 70
> group.

I'm not the one who made the initial allegations, nor am I the person that collected the evidence. I have, though, seen the evidence. Times, dates, beam headings from several listening stations, transmitter fingerprints of the offending party both "jamming" and later "talking", and a log of DFing activity.

I can't parse your second sentence.

> Lets talk about 1R and others and know that.

1R? You mean the nazi?

> Now this is getting good Mark. No lets talk about the time I was on my

What is your point? .70 is filled with more clueless bozos than I care to count. Am I supposed to be somehow offended by you insulting a club that I'm not even a member of? Hell, I go out of my way to make fun of .70, and I hope it stays like that. That way it attracts the "bugs" like a big light in the middle of a field, and keeps the other repeaters in the area free and clear of the morons and "instant extras".

Let's not lose focus of the original article: People should not give n1jbc "inside" info on repeaters because he uses that info to hack in to other repeater systems. He has done it before and you know what they say about a leopard and its spots.

What does one thing have to do with the other? What does catching n1jbc red handed jamming and hacking into repeater systems have to do with other clueless morons on 70? Just because 70 is populated by a bunch of nit-wits doesn't excuse your poor blind boy's behavior does it?

> Now as far as you accusing me of the jamming the 70 freq by bringing up
> the autopatch that is wrong and dam well know that.

WHAT? What are you TALKING about? Are you reading the same message that I'm posting? I never claimed any such thing, unless your name is Edwin "Jed" Barton. I suggest you go back and re-read the messages in question.

> don't charge for it. my users can access the autopatch for free as long
> as there are no toll calls. I also have the finger-print hooked up to
> the repeater with a lap-top and I find it to work OK thats it.

I'm glad you're contributing to ham radio in the area not detracting from it like the poor little blind boy.

> The only thing N1JBC ask for is help in picking out a good repeater that
> he would buy and put up. He already has a 220 up and has the 440 pair
> already. If you and others don't want him on the 70 repeater you should
> leave him be and let him use his own repeaters but some of the 70 group
> just like to start trouble and you know that. So instead of helping this
> trouble start you shoud be a concerned ham and tell Mike to leave things
> alone and not to start more shit like he is trying to do.

I'm not a member of 70 so I could really care less if the poor little blind boy is a member or is allowed on or not. I do know though that he is a lying scumbag that jams and hacks into repeater systems. How many times has Jed asked you for "the codes" to your machines? How many times have you heard "bleep, bleep" at 3 or 4am? 4am, 4pm its all the same when you're blind.

> >From the previous message about the TM-733 you know I am right about the

> think you know that. If he has jammed the repeater i think it should be
> taken care of the right way not by talking bad about someone in messages
> going all over the world, I think you should agree with that ?

no i don't agree with it. If Charlie Manson hacks into computer systems and Charlie Manson shows up on rec.radio asking for "AOL passwords", should you stand by and let a crime occur? If you fail to warn people you are as bad as the person committing the crime; an accessory before the fact.

> the big question is that now that N1JBC don't go to the 70 repeater is
> all the jamming gone (NO) and has anyone blamed him for the jamming that
> is going on now (YES) that is wrong because they ASSUM that it is him
> and it makes others beleave that person. the matter should be dropped
> and let go but persons like Mike just keep it going to make trouble and
> that is wrong, am I right ??

If one of the bozo control operators "assumes" its him, its His problem. Barton made his bed when he jammed/hacked repeater systems, so now he has to lie in it. Oh, and your buddy Jed has been DFed jamming 70 After he was told not to show up there, but the poor little blind boy probably didn't tell you that huh?

> Now I am not sayiong that all the users on 70 are have bad operating
> prictices but there are many of them that do and the club has lost many
> members because of this and you know that.

What's your point? I'm not a member so I could care less if 70 disappears tommorrow, although that would mean the bozos would start showing up on other repeaters, which is a bad thing.

> I know you have seen this happen if you been on a long time. there were
> even members that would give all the new users a hard time about the way
> they came on the repeater instead of helping them with the right
> practises of ham radio, now that is WRONG WRONG WRONG. Also when two or
> more Home stations are in QSO that are able to go to simplex without any
> trouble they stay there tring up the best coverage repeater and making
> the mobiles move to another repeater , that is WRONG the repeaters are
> there mainly for low power radios that can't QSO via simplex ie: HT's
> and MOBILE radios. One more Page Ron N1OLF

And again your point is.... what? A bunch of clueless bozos on 70 doesn't excuse your buddy's jamming and repeater hacking activities.

Mark

> hobby but it will not come from what Mike and others are putting out
> over the world.

I for one am glad its out in the open. I don't go for the catheloc church "transfer the pedophile and it will all go away" approach. People who have no respect for the regulations have no respect for the hobby and should be exposed as the charlatans that they are.

> The bad thing is that the only person that is getting hurt by this is
> someone that isn't even bothering with the 70 repeater and don't wish to
> so all the persons talking about him should stop and let it go and find
> others that are doing the jamming now and stop blaming JBC for
> everything that happens on 70 that they don't like.

Boo hoo hoo. the poor little blind boy. "They're picking on me. See, see, they're picking on me." We've heard it all before. Ask KA1RCI why he banned Barton from his packetcluster. Better yet, ask Mike how he stood up for Barton and then had to eat his words and apologize to RCI publically because Barton was caught Yet Again jamming and hacking systems.

I have no sympathy for Barton. He's a lowlife scum that shouldn't have a radio license.

> I hope you can see my point of view.

Sorry, no such luck.

Interesting.... I think we should kill Latin too.... :) BTW didn't this thread
started with someone saying that over 50% of whatever people's abilities
is below whatever (forgot which one was it.... the thread is getting long..)

From a car nut's point of view, we should ban man from buying convertables
since over 50% of the convertables are sold to women, why not ban the
sale of the convertable altogether, since it don't have such huge portion
of the market as other hard-top model..... :)

Well I guess all the above says all, kill everything that's below 50%,
and when you need to use something that's been killed because of this,
don't cry.... :)

1831. NEED PLANS FOR 10M/70CM RPTR

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-24 00:00:00 UTC
From: dwhowell@iamerica.net
Message-ID: <4o5ha2$f00@ns1.iamerica.net>
Source record: 224680

Hello,
I am looking to set up a 10M/70cm repeater. I am looking for
suggestions as far as a setup goes. Please Email me with your
suggestions.

Here's the setup I was looking at:

Site #1

TRANSMITTER 29.68 MHZ (100kz SPLIT)

RECEIVER 449.250MHZ (5 MHZ SPLIT)

Both Vertical Omni Antenna's. I don't know exactly what to use for
COR/ID/Rgr Beep etc... Any ideas?

Site #2

RECEIVER 29.58 Mhz (100kz split)

TRANSMITTER 444.250 mHZ

Using both of these on a Omni Antennas

Don't know abt the control functions on this end either.

All suggestions are welcomed.

Thanks es 73's
dwhowell@iamerica.net

The subject (Get a spell checker Ron!) can never go away. So long as
N1JBC goes sniffing for repeater information somebody has to post
an article warning people about him.

I hereby vouch for both KD1HZ and Mark Phillips - I've helped to collect
the evidence against N1JBC. It **is** real. In addition, KD1HZ and I
aren't the only ones who've traced the interference to it's source.

>MP> Part 97 allows a repeater trustee to limit access to his/her machine.
>
>Your right THE REPEATER NOT THE FREQ, Think about it

Reference 97.205e if you need a refresher. The case of repeaters and
frequency ownership are in a very gray area. For example, KD1HZ has a
repeater coordinated on the 70cm band. While it would be ok for another
amateur to park on his output frequency and transmit it's not good
amateur practice to do so. Neither is it good practice to have a simplex
conversation on the input frequency. KD1HZ did exactly what he had to
do to stop N1JBC. Why should KD1HZ have to shut his repeater off and
deny his associates and friends the use of the repeater so that Mr.
Barton can have his little parties on the air?
>

This is what does happen in some parts of the country but here in
New England we've got alot of Hat & Badge men. While I don't necessarily
fault the OOC - after all who wants to initiate an action against
someone as slippery as Jed Barton? Fortunately someone else had the
intestinal fortitude to do something about it.

Allocations? Perhaps you need something a bit stronger than a spell
checker. Enough information was sent through channels to the appropriate
people and the ball was dropped. See my reasoning above.

Are you a complete nitwit? It's not just the 146.700 repeater that
N1JBC was caught on, there were a few others. You've just fallen
into the "Poor Little Blind Boy" trap and can't get up.

>Took me one year.

Took me one week to get to 5wpm. Then got on the air as a Novice and
had a ball with my DX-60 xmtr, working CW stations all over the country.
My code speed went up real fast while having loads of fun - didn't
consider it any work at all. So list my entry in your survey as 1 week
of a little work, and about 4 weeks of pure fun to get up to 13.

The whole point of the Novice license is to build your code speed *on
the air* while having a great time - no one should think of building
one's code speed as work. If you do then you're attempting to circumvent
the purpose of the Novice license.

Over the past week, I've worked from New Mexico to New Brunswick with my TS-60 (100w) and a Diamond brand ground plane. Six has been simply amazing this week! I've run into at least 4 stations from Wyoming, and heard XE2OR in Coahuila, Mexico a few days ago. The IC-706 has certainly had an impact on 6m station density, and I also worked a guy in Colorado Springs using the new (10w) MFJ 6m SSB rig, and he only had a dipole!

I've been calling CQ in Spanish, but so far have only raised excited Texans...

: >that theory -- that's OK by me, but since you made the choice
: >voluntarily ...
:
: It was involuntary, if I wanted to get on HF VOICE.
: Learning CW was a WASTE of time. Learning RF theory would have been
: MUCH more benficial that being forced to learn a dead language, CW.

Latin's a dead language (so they say) but it's still in extensive use.

: >I'm not sure why you bother to tell us what you -could-
: >have learned instead of "wasting" your time.
:
: Because there are a lot of old farts here who like to complain
: about "whiners" who are to lazy to learn CW. Well I learned CW
: and still don't like it, don't want to use it, and feel my valuable
: time was wasted. I want HF voice priveledges. CW is irrelavent and outdated.

Then perhaps you should address yourself to learning foreign languages.
English being a minority language. Surely "voice" would include
Cantonese for instance. Seems you've got your principles knickers in a
knot!

It's not so much "whiners" as "whingers" who can't get their own way as
minority group. If you don't like it then "get out of the kitchen!"

Cheers....Mike

SB QST ARL ARLB030
ARLB030 SM election results

Ballots have been counted in Section Manager elections for Vermont
and Western Massachusetts. Terms of office begin July 1, 1996.

The results are as follows:

In Vermont
Justin C. Barton, WA1ITZ, 234
Ronni Stern, KA1NRR, 105
Barton was declared elected

In Western Massachusetts
Mark Casey, N1LZC, 163
William C. Voedisch, Jr. W1UD 232
Voedisch was declared elected

In eight other sections, positions were not contested. The
following were declared elected.

In Alaska, Russell Ely, WL7LP, which became effective March 20, 1996

In Illinois, Bruce Boston, KD9UL.

In Indiana, Peggy Coulter, W9JUJ.

In Maine, Michelle Mann, WM1C

In Northern Florida, Rudy Hubbard, WA4PUP

In Oregon, Randy Stimson, KZ7T

In Santa Clara Valley, Kit Blanke, WA6PWW

In Wisconsin, Roy Pedersen, K9FHI.

To all radio amateurs

SB PROP ARL ARLP021
ARLP021 Propagation de KT7H

There were four consecutive days of zero sunspots last week. The average solar flux was down five points from the previous period. Expect similar conditions through the rest of 1996 as we experience the solar minimum.

A note from Shel Shallon, W6EL pointed out that the progress of any solar cycle is judged in terms of smoothed sunspot numbers, and that the smoothed number for a given month is an average of 13 months of data, centered on the month of interest. Therefore we won't really know when the sunspot cycle minimum has occurred until some time after the event. Shel is the author of the popular Mini Prop propagation prediction software.

Shel goes on to say: ''Reports last year that the first spots from cycle 23 had been observed were erroneous. It is now believed that the first spot from cycle 23 was observed on May 10, 1996. Typically, the sunspot cycle minimum does not occur until at least twelve months following the appearance of the first spots of new cycle. Therefore, the minimum between cycles 22 and 23, and the official start of cycle 23, may not occur before May 1997.''

Current solar flux progress for the short term points to a slow rise to a peak just above 70 around June 7 or 8, and then a drop below 70 around the middle of June.

For the WPX contest this weekend look for more of the same conditions; few sunspots with a quiet geomagnetic field.

Sunspot Numbers for May 16 through 22 were 26, 12, 0, 0, 0, 0 and 11, with a mean of 7. 10.7 cm flux was 71, 71.2, 70.3, 68.8, 68, 66.9 and 66, with a mean of 68.9.

I am not taking a side on the code issue Garrie, but your logic doesn't set with reality. You seem to be associated with a high school. How useful to your students do you think ancient history or many other obscure subjects really is? The reason we are exposed to many things we may never use is that it broadens our overall knowledge in life. I can point to many things I had to take in high school and college that I will never use if I lived to be 200. They didn't hurt me any either.

snip...
>N3SQY

What it does leave is the IARU, International Amateur Radio Union,
which prescribes the rules for International membership. It is the
IARU that requires CW for HF. The FCC is just following the rules the
U.S. has agreed to abide by.

We, here, are not going to be able to change the CW requirement, even
if we all agreed. This may be a fun place to vent your disagreement
but it does no real good; it is poorly directed. And, believe it or
not, this discussion has been going on for years and years. Long
before internet was generally available.

If you wish to get the requirements changed you might find more
productive ways to doing so. Otherwise, you just irrate the 'hams',
to borrow a phrase.

Yeah, that old argument. I suppose paying for items you buy is also
involuntary, since you can't get the item unless you pay for it.

>...Well I learned CW
>and still don't like it, don't want to use it, and feel my valuable

you
>>might have a lot of fun to boot.
>
>At this point, I don't know enough about HF theory to build anything,
>but I do know CW at 13wpm.

>
Interesting binary world you live in -- you can -either- study code
-or- study theory. Of course you -could- have gotten on the air at
5wpm, increased your speed, had some fun and built some simple gear
(fun again). But then you would have had to let go of the attitude.
Guess that was more important to you.

Some people don't get it - from 1980 to 1989, the U.S. Amateur Radio Service LOST about 90 MHz of spectrum with reallocations away from ham use in our UHF bands. We average a LOSS of 9 MHz per year during the period. In the last period, 1989, we only lost 2 MHz at 220-222 MHz!

Radio frequencies are now for sale to the highest bidder. There is much hope that the government will continue to view our work as in the public service category (and there are indications that this is the case) and not auction the frequencies we use for such. On the other hand, many in government right now think radio frequencies are measured in dollarhertz, symbol $Hz. Why, you must operate in the 2.4 G$Hz (Giga $ Hz) band!

I just saw a reference in a commercial wireless newsletter today with a quote from a named FCC staffer who suggested that the FCC might be considering how to auction parts of the 5.7 GHz frequencies that hams now share. Whoa!

If the standard is better than 99.9% understanding than I don't see how any name can ever be chosen for any group.

> That's why I think the proponents need to give in and go with >r.r.a.antique (or some such)

Except most boatanchors are -not- antiques. For those worried about "what is a boatanchor" postings, consider that another, less accurate group name will result in "is this the group for boatanchors?" postings. Is it right to confuse those who are most interested in the subject matter of a group in order to (hypothetically) cause less confusion to those who are not as interested in the subject? That makes no sense to me.

Hank is in a position to know about both the rec.antiques.radio+phono
newsgroup and the Boatanchors List! I have read his knowlegeable and
informative posts on the List for a long time and have learned a great
deal from them. He has indeed been around a long time and has worked on
some of these "boatanchors" when they were the latest thing. To be sure,
there is some overlap between the two interests, but I do not feel
excluded by the provisions in the r.a.r+p newsgroup that limits discussion
because I know that the main focus is vintage and antique radio
(broadcast) receiving equipment, phono, tape recorders and things related
thereto. I find plenty of action in the areas I find interesting on the
Boatanchors List and am very pleased with the useful information and wise
counsel from folks like Hank and frankly could care less whether or not
they hold an amateur radio transmitting license. It is not relevent.

I for one would be very happy to see this thread nitpicking about the name
come to a merciful end. It seems that the concensus is strongly in favour
of "boatanchors" which is a wonderful name to describe these heavyweight
technically obsolete relics we so fondly and avidly maintain temporary
care and custody and preserve for future enthusiasts.

Let's get on with the RFC and the CFV and have a newsgroup AND a mailing
list. There is certainly enough interest to support both!

From 0 to 5 WPM 18 months found I had an interesting learning
disability.

From 5 to 13 WPM 14 months.

All in all it was the biggest waste of time in my life. I wouldn't wish
this nonsense on anyone. Based on interactions with pro code people
here on the net I will most likely never use it on HF. VHF/UHF weak
signal now that is another matter, gentlemen are to be found on those
bands and working them on any mode is a pleasure.

Didn't take a waiver just did it so I could have the pleasure of
telling the Code Nazis to kiss my ass. That is satisfaction enough.

One aspect of all of this is that Ky. exempted hams from our scanner
laws a couple of years back. Even without an FCC exemption it would
still be legal for a ham to have a scanner in Ky. I have never been
hassled about ANY of my radios in my car. I do storm spotting for the
NWS here in Louisville and even have a pro-2035 in the car a lot of
the time.

The other big discrepancy is that it was stated that the radio in
question WAS the htx 202. It looks like we are going to have to get
more information on this. I'm trying, but so far no go.

I think the point here is that the htx 202 will not scan in police
frequencies. Unless there is a modification that has come out in the
last couple of months that I haven't heard of, which is possible, the
202 is strictly 2 meter ham band only.

Also, being a Ky. resident I would like to get more information on
this. My inquires on 2 meters in the Louisville area have gone for
zilch. Anyone know where I can get RELIABLE info on this?

Thanks.

Help!!!!!!

I have a Pontiac Transport that I would like to place an antenna to work with an HR-2510 27 mHz range. The only antenna's that I have tried so far are the "Radio Shack - through the window type" and a small highly loaded window clip on. Both have a very low bandwidth and short 2-3 mile range.

I know that all magnetic mounts are off because the only exposed metal are the lug nuts. " I could get 4 Wilson 1000's and mount them on the flat side on each wheel and look like a Roman Chariot Racer"

Anyway, does anyone out there have any Ideas or Experience with this plastic problem.

Mike Fay

>use, world wide.

There are hams with VHF-only licenses who've never heard of "DX".

A particular r.r.a group doesn't necessarily exist to target every ham.
A home builder's heart will skip a beat when he first finds out there
is a "homebrew" group, yet another ham who might not even own a soldering
gun might have never heard of "homebrew". Again, these groups don't exist
to appeal to every operator.

> I would have to guess here and say many, maybe even most, but not all
>Ham's know the term Boatanchor, my wife (N7PYK) doesn't,I asked.

Does she read QST, 73, or CQ magazine? Does she have any interest in
tube gear? She is a Tech Plus, so I assume she doesn't operate any
of the older HF military gear. Because she probably doesn't have any
interest in this type of gear (and probably no interest in magazine
articles related to this gear) there is no reason to expect her to
have heard of the term BA. The newsgroup will be targeted to those
who already have an interest in that type of equipment.

> That's why I think the proponents need to give in and go with
>r.r.a.antique (or some such)

BAa are not antiques.

>Ralph Lindberg N7BSN

You also are a Tech Plus which leads me to believe you have no interest
in operating this mainly HF military and amateur tube gear. You would
not be someone the group would necessarily target.

Dear Floyd and QNET SysAdmins:

We have been having problems on the various sci.electronics and
related groups with Floyd here acting as though someone is wasting his
bandwidth and newsfeed talking about the Parallax BASIC STAMP
microcontroller, a perfectly normal topic for this group. We suspect
he might be a few bricks shy of a load in this respect. I even suspect
he thinks people are interjecting about "stamp collecting", i.e.,
philately!! The BASIC STAMP is a Microchip PIC-based Microcontroller,
and is appropriate for ALL the groups in HIS newsgroup line we keep
seeing! They are used by roboticists, amateur radio enthusiasts, and
all electronics technology for simple controllers!! We are TOTALLY
puzzled by his near psychotic ramblings and protests, and we ask you
to have a talk with the fellow to see if he is "assembled properly"!
Thanks a bunch, and have a nice day, you guys!
-Steve Walz rstevew@armory.com
P.S. L.O.S.A. is a mail list for stamp application technical notes,
and it is considered quite kosher to post in this neighborhood of the
UseNet.

I think we are all about to have this cleaned up. Evertime I have seen one of the following notices come out, it usually means the FCC is getting ready for some High profile enforcement action or to issue a notice of proposed rule making. .

PUBLIC NOTICE
FEDERAL COMMUNICATIONS COMMISSION
1919 M STREET NW
WASHINGTON, D.C. 2055462882

News media information 202/418-0500.
Recorded listing of releases and texts 202/418-2222.

May 13, 1996

Extended Coverage High Frequency Transceivers

The purpose of this Public Notice is to clarify the Commission's Rules regarding equipment that is intended to operate in various radio services in the high frequency radio spectrum, including"10-Meter" Amateur Radio Service (ARS) equipment.

The Commission has noted that a number of transceivers imported as ARS equipment are also capable of transmitting and are being operated in nearby frequency bands allocated to other radio services such as the Private Land Mobile Radio Services, Maritime Services, Auxiliary Broadcast Services, International Broadcasting Services, the Citizens Band Radio Service, and the U.S. Government. Operation of this equipment causes interference to the authorized users of these frequencies. Some of these transceivers are capable of using output powers or emission types which are not permitted for the radio services listed above and some are capable of transmitting in the radio astronomy band where no two-way radiocommunication is permitted.
Some manufacturers are promoting the sale of conversion kits, or have designed their transceivers such that they can easily be modified by the users, to extend the operating frequency range into the frequency bands listed above. In addition, so called "export" radios which are deliberately designed to

facilitate this capability are also being imported and marketed.

Manufacturers, importers, vendors and users of these transceivers are reminded that transmitters intended for operation on frequencies allocated to any of the FCC authorized radio services listed above, except the ARS, must be type accepted by the Commission for the particular radio service(s) in which they are intended to operate prior to their importation, marketing or use. The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range. Transmitters designed and intended for use only in the ARS must comply with the applicable technical standards contained in Part 97 of the Commission's Rules but are not required to be type accepted.

It is a violation of the Commission's regulations to: (1) import or market a transmitter that is designed or intended to operate on frequencies outside of the ARS bands, if it has not been issued a grant of equipment authorization for the radio service(s) in which the transmitter is capable of operating; (2) import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued; or, (3) transmit on a frequency allocated to a licensed radio service without the appropriate Commission-issued station license. Violation of the Commission's regulations will subject manufacturers, importers, vendors and users of this equipment to appropriate criminal penalties as provided for by federal law(s), including fines and/or imprisonment. In addition, the equipment described above can be seized by, and forfeited to, the government.

For further information concerning this Public Notice, contact Gary Hendrickson at the FCC Laboratory, 7435-A Oakland Mills Road, Columbia, Md. 21046, (301) 725-1585, Extension 223, or E-mail: ghendric@fcc.gov.

Hello All,

Every Time I have seen a notice like this come forth it usualy signals some impending action. This notice makes for interesting speculation, the FCC does not bother to send reminders unless they are about to do something. better get your HF radios for MARS and CAP now as you might just lose the ability to open them in the future. This I think is leading up to cental monitoring in Maryland, they remove troubles before they start. Enforcement before the crime so to speak.

Actually, the "scanner law" only really effects amateur radio
operators, not their radios. A non ham with a ham HT or a scanner is
not offered the same protection -- THEORETICALLY -- as a licenced ham
with an HT. As I understand it, the object of the "scanner law" is to
protect hams who have HTs that "JUST HAPPEN" to be able to receive
police freqs. I don't know if that is extended to recieve-only
scanners, but the cops should not be able to take away my IC-24AT just
because I can listen to their traffic.

Hal

I must agree whole heartedly with you I was enthusiastic about all aspects of amateur radio. The Code Nazis, as I like to refer to them, here on the net have changed all that. The hate directed at anyone who is foolish enough not to worship the Great God Code certainly turned me off particularly towards HF CW. Like you I wonder why anyone would want to communicate with these oafs.

Now for the good news. Weak signal VHF/UHF has a bunch of neat people satellites the same in fact if you get off the net your attitude will improve markedly. Interestingly I have never encountered the most vociferous of the loud mouths foud here on the air. The net seems to have some undocumented effect that increases volume while removing any sign of civility.

No radio communication will get thru the plasma produced by nuclear war.
It not only produced highly ionized regions that attenuate signals many times
more than the D-layer it is also very nonlinear thus mixing all the signals
that strike it. This is a problem that they have never been able to get around.

In the US we generally have the option of either "metered" service where
any local calls beyond a certain amount (2 hours here) per month are
charged extra or unlimited local which has a higher base rate but beyond
about 3 or so hours is cheaper than metered. Anyone who uses a modem
usually has unlimited service.

>Thanks

Replace the distributor cap and rotor. A spark jumps in there too (from the outside end of the rotor to the contact for the proper spark plug). As the sparking surfaces wear down, the spark gets longer and makes more noise. Of course, the wires need to be the resistive type, including the one from the coil to the distributor. A bad wire could spark internally and make noise, so replace the wires next.

1877. CW is Cool!

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-24 00:00:00 UTC
From: sgoller@tyrell.net
Message-ID: <sgoller-2405960913500001@198.175.8.3>
Source record: 224742

I've been reading a lot of threads here that pan or promote CW. Well, let me add to the chaos and share my opinion.

First off, I am 36. I own a CB (2 in fact) and I am _not_ a Ham. However, I spend about 4 hours a day monitoring operators on my scanner or shortwave and I'm studying for the Tech Class-No Code license.

My wife asked me, "Why do you want a license?" I told her,"I love radio. I love electronics. But mostly, I love to learn."

And that's what being a Ham is all about, learning. For goodness sake, it's a hobby! It's something we do for fun and it's something we do because we choose to do it.

Once I get my No Code license, I look forward to "learning" more and studying code. Some may argue that code is outdated or why learn it when we can buy a computer to do it? My response ... so what. I'm in the hobby because I love radio. I love electronics and I love to learn. I will probably use a computer to help me "learn" CW. And, once I "learn" it, I may even use a computer to help me transmit and receive ... who cares. At least I made the effort to explore my hobby and "learn" more about it. I also look forward to the rewards that come with the education ... greater band access.

If you don't want to "learn" CW ... don't. Perhaps I'm naive and I'm getting into this hobby for all the wrong reasons, but I enjoy a challenge. I enjoy self-improvement. I enjoy being able to do things that other people only wish they could do.

As for the CBs. I use them when I travel and I occasionally chat with some "good buddies" in town. Afterall, it's radio, it's available to everyone and until I get my license, it's the only option I have to get "on air". I'm not going to complain about the Hams who have greater options and more band choices. They've studied and they've earned it. Hopefully, some day soon, after I study, I'll earn the same honors.

73s (or as we say in 11 meters - Catch ya later),

WWII was before my time and before Burt's as well. I do
however believe that there was no amateur activity from any of the
involved countries during that period of hostility. Burt castigates
all based on the actions of a few, as long as it suits him. It doesn't
matter if the subject is a hobby or a nationality.
Burt speaks fondly of Japanese hams. If he read a book about
Bataan would he do the same? Burt should avoid:

group reason
American hams treatment of native Americans
German hams Nazi attrocities
Japanese hams treatment of POWs
French hams Vichy swine
Russian hams pre-WWII pacts with Germany
(all former SU)
Italian hams allied with Germany during WWII
Dutch hams apartheid in South Africa
all African hams black Africans sold other black

Africans to the white slavers
Spanish hams support of Axis powers in WWII,
UK hams colonial aristocrats
Canadian hams French and Indian wars
etc ... etc...

hams in general old, fat and boring

Hopefully Burt has sold his ham gear, after all no one that
knows him would talk to him. Burt says he likes to study boring people
so he keeps an eye on hams, perhaps he should watch himself in the
mirror. Burt is boring, recycling his lame canned messages
continually. It is a suprise to see a post with something new in it.
Burt Fisher, net loon, has nothing relevent to say but he says
it anyway.

NO, i pay a local IPS $21.95 a month for a 100 hours, and that's all i
pay,AT&t or MCI will give you unlimited time for $19.95 a month if they are
your long distance provider-- they say your local company may charge you,
but i don't see a local telephone company charging for use of an 800
number, However some people have a limit on the number of message units per
month they can use and this involes time as well, so they could run into
extra charges on their bill. so far i have not seen any on mine.i had AOL
when i started out and dumped them when i found the local IPS, Some people
in the L.A. area get it for a low as $14.00 per month.this is for the USA
and your setup would be different, but you would need to look at all the
ways you can buy the service from your telephone company(i know you only
have one)and no choice!.

Discussions of L.O.S.A. weren't the cause of all this. It was
the (long) FAQ that brought out the flamer.

>P.S. L.O.S.A. is a mail list for stamp application technical notes,
>and it is considered quite kosher to post in this neighborhood of
>the UseNet.

The subject matter is appropriate, but there have been discussions
in the past about long posts on the Rec.Radio.Amateur newsgroups.
Because many people seem to subsscribe to these through a mailing
list, and because not everyone has a local ISP (or unlimited free
time), it was generally agreed that long files should be reserved
for FTP or Web sites. That's one reason UUE schematics and other
binaries also aren't posted to these groups.

None of this affects me personally and I certainly don't agree with
the flamer's methods. I just want to point out that it was the
length of the file, not the suitability of the topic, that initiated
this discussion. It should also be noted that of the favorable
letters the L.O.S.A. FAQ author received, most did not address this
issue. Rather, they merely stated the readers' interest in Stamps.

I think it's interesting that all of these letters, favorable or
not, were posted to USENET without permission of the various authors.
Perhaps the person posting this FAQ has a reason to do so that goes
beyond the interest of the groups?

F.C.C. rules go well beyond the requirements of the IARU regarding Morse proficiency. IARU could be satisfied with a 5 WPM requirement for all privelages.

Even if IARU eventually drops this requirement, that doesn't mean it will be in our best interests. Not all countries share the goals set forth by the F.C.C., nor do many of them care if these frequencies degenerate into another Citizens Band.

Well, anyway it seems I may have mis-attributed my post in this
regard, though I had thought I looked carefully, but in any case:

While some or even many radio amateurs are still in the analog dark
ages sending postcards to each other, packet radio and other digital
advances have arrived, and I know of two radio buffs myself, and THEY
use microcontrollers for their own equipment, so then, what in the
world do YOU mean by saying that a PIC STAMP list of applications is
non-relevant to amateur radio??? THEY seem to think it is QUITE
apropos, and even though I only KNOW these TWO amateurs well enough to
know, I somehow doubt that THEY wouldn't have a sense for the breadth
of that endeavor and the attitudes of OTHER folks involved in it!

So either explain your position now, or else come off of it and admit
that whoever is SPAMING the L.O.S.A posts is just a backwards
head-up-the ass son of a bitch technologically, and some kind of
vacuum loving analog throwback!! ;-) Of course I doubt you will, but
people telling the honest truth on the Net seems a bit rare anyway,
and I think you can agree about that!! ;->

And I just wished to say sorry to Floyd once again, as I went blank or
somesuch and totally mis-attributed the more strident SPAM to him, and
I have also done so in email. I am simply puzzled why people are not

availing themselves of all the local ISP's who almost invariably offer
unlimited untimed access for under $20.00 a month! Many are only $15 !!
Some associated with geek houses are honor system donations sorts
of affairs and cost little to join! There are more and more small
domains created everyday for this purpose! Just ask around and don't
let the big guys make you think they're the only show in town!

The response (and other comments) have been posted to my WWW page at:

http://www.why.net/home/tom.blackwell/

Click on "Comments on the SPOC"

There is some discussion that MACC is in the process of reversing its previously announced position against future 420 MHz. ATV coordinations. If an official release is provided, it will be made available at the above address.

The NFCC proposal, as it is now on paper, missed several important points made at the St. Louis meeting, which I see on the videotape. I am very disappointed in this proposal. I am convinced there is a better way to: (1) Elminiate problems caused by "renegade" coordinators or "instant" coordinators, (2) Eliminate problems caused by "renegade" coordinations, (3) Reduce or eliminate the motivation for persons to sue volunteer coordinators in State or Federal Courts over coordinations and (4) Make this all very simple. Watch the above page in the future for more on this proposal for a regulatory scheme intended to better resolve these important issues.

1888. RESULT: rec.radio.amateur.dx passes 212:26

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: Jani Patokallio <jpatokal@alpha.hut.fi>
Message-ID: <833011166.11473@uunet.uu.net>
Source record: 224603
Cross-posted to: news.announce.newgroups,news.groups,rec.radio.amateur.misc

RESULT
unmoderated group rec.radio.amateur.dx passes 212:26

There were 212 YES votes and 26 NO votes, for a total of 238 valid votes.
There was 1 abstain and 2 invalid ballots.

For group passage, YES votes must be at least 2/3 of all valid (YES and NO)
votes. There also must be at least 100 more YES votes than NO votes.

There is a five day discussion period after these results are posted. If no
serious allegations of voting irregularities are raised, the moderator of
news.announce.newgroups will create the group shortly thereafter.

Newsgroups line:
rec.radio.amateur.dx Discussion, tips, notices and news for DXers.

The voting period ended on 23:59:59 UTC, 24 May 1996.

This vote was conducted by a neutral third party. Questions
about the proposed group should be directed to the proponent.

Proponent: Richard Eckman, KO4MR <eckman@norfolk.infi.net>
Mentor: Jonathan Grobe <grobe@worf.netins.net>
Votetaker: Jani Patokallio <jpatokal@alpha.hut.fi>

RATIONALE: rec.radio.amateur.dx

One of the many activities enjoyed by amateur radio operators
("hams") is "DXing", the pursuit of making contact with as many
countries as possible. As used in this sense, a "country" might be
anything from a traditional geopolitical entity to a remote,
uninhabited island or coral shoal to which hams venture for the sole
purpose of "putting it on the air." The term "DX", apparently
derived from the word distance, can be traced to the earliest days
of amateur radio experimentation. Today, the term is universally
understood by amateur radio enthusiasts. A significant number
of the several million licensed amateur radio operators worldwide
characterize themselves as "DXers". Many shortwave listeners (SWLs)
also enjoy DXing amateur radio transmissions. Annual surveys
identify the rarest DX countries (i.e., those with which the fewest
hams have made contact), and each year a number of these are visited
for anywhere from a few days to several weeks by groups of hams.
Often these "DXpeditions" are multinational undertakings conducted
by the very best amateur radio operators in the world.

Existing moderated and unmoderated e-mail reflectors are dedicated to DX topics, but many hams have indicated that they prefer discussing DX on Usenet rather than have their mailboxes fill with reflected mail. DX discussion on Usenet generally occurs in "rec.radio.amateur.misc". Amateur radio is an extremely multi-faceted avocation, however, and the wide range of topics discussed in this newsgroup sometimes makes it difficult for individuals interested primarily or exclusively in DX to easily identify articles of interest to them. This problem can be further complicated by the volume of traffic in this newsgroup and the short expiration periods on many news servers. It is for these reasons that a new newsgroup devoted exclusively to DXing is being proposed. Since DX news is often of timely value, this new newsgroup is meant to complement, not replace, the mail reflectors, which often get messages to their destinations more quickly than news articles propagating through Usenet.

CHARTER: rec.radio.amateur.dx

The purpose of the "rec.radio.amateur.dx" newsgroup is to provide an unmoderated forum for the discussion of topics of general interest to DXers, including but not limited to:

o announcements of and invitations to join upcoming DXpeditions;

o information about QSL routes;

o tips and techniques regarding good operating practices;

o solicitations for schedules that will enable new DXers to get the last few "new ones" needed to qualify for DXCC;

o periodic postings of data files, such as the DXCC countries list, great circle coordinates used to determine beam headings, etc.;

o administrative policies and practices pertinent to DX operations, such as gaining recognition for a DXpedition by national societies, adding new countries to the DXCC countries list, etc.;

o the general joys and sorrows of participation in or making contact with a DXpedition.

Although the term "DX" is usually used in reference to global communications on the HF bands, operators who use other modes have different applications of this term. This is especially true of VHF and UHF operators, for whom a contact of only 1000 or even 100 miles might well be considered DX depending on the band in which the contact is made. There is currently no newsgroup dedicated to these operators. Although the majority of the traffic on "rec.radio.amateur.dx" is expected to concern HF DXing, proponents of the higher bands are welcome to use "rec.radio.amateur.dx" as a forum in which to discuss their DX activities and, in fact, are encouraged to do so.

Postings that would be considered inappropriate for this newsgroup
are those whose topic falls more naturally under the charter of some
other newsgroup in the "rec.radio.amateur" hierarchy. For example,
discussion of radios used by DXers would be more appropriately posted
to the "rec.radio.amateur.equipment" newsgroup. Similarly, general
discussion of beam antennas typically used by DXers would be more
appropriately posted to the "rec.radio.amateur.antenna" newsgroup.

72527.01012@compuserve.com says...
>
>
>> Hey there guys, I was wondering if any of you could shed some light on
a
>>440 machine. .....

Real hams don't buy repeaters at a store or via mail order....

They build them....

Making them work and keeping them running is half the fun...

If you just want to talk and not actively involve yourself in the
operation and maintenance of a repeater, join a club and use theirs...

UG.

Years since I lived in/around Seattle, but anyway, hello.

I'm no computer guru by any means, but to be sure, why are
you hanging on to some old relic like that? I've seen 170Meg
hdd's in the scrap yard. Personally ran thru a 40meg when I
had a 286, (used stacker) then the time came I got a 540M,
speak of luck, the 40Meg gave up the ghost only two months
later on.

Uncle Brian (VK6BQN)

1891. Re: SURVEY: How long did it take you to pass 13wpm code test?

>>

I'm here to tell ya I broke your two year limit by a LIFETIME.
I took my first interest in Amrad at about 14, but was in a
boarding school where such was "discouraged". It wasn't
until I was outta there, like 18, that I had the freedom to pursue
it any further. Took a few months to get the 5wpm, stumbled
thru it with my Elmer who was a VEC (this would have been
c. 1956) then went on with the 33rpm Ameco records (tapes
weren't around yet) . Memorized every last digit on them sons-
o-bitches. Never did get over the "10w. hump"

Years later following degree-chasing and a busy engineering
career before I ever had any time to do other than the common
"raid" on the Mars warehouse. STUCK on 6m AM.

Then came the move to Australia. About 1972. No code for
the tech, was happy enough with just the 2m jungle-phone.
But by now the bug had bitten. I WANTED h.f. priveleges, and
the test here is a mere 10wpm, but you have to copy 5 minutes
straight with a max of 7 errors! Believe it, that's ROUGHER
than 13 full of holes. By now, though, the problem has been
addressed by all the new learning aids. Beacons on 2m, the
ITU spacing bit, cassette tapes, maybe just more maturity.
Took a few months, maybe 4 or 5, but went and did it. Went to
take the test (at dept office, no VECS) saw that I was GOING
TO PASS!!! After all these years!!! Got me so nervous I actually
dropped a whole word (and damn near failed for THAT). BUT I
DID get it, threw the key in the drawer and never looked at it
since. Bugger CW. Biggest waste of time in the world, stubborn
insistence on it has kept all the youg blood out of the hobby,
and now it's as obvious as the nuts on a bulldog, it has killed
the hobby.

I have been unable to get any information on this here in the Louisville area. Not a single person I've talked to has even heard of it. I talked to a friend of mine on the phone yesterday about it. He is KO4BI, Stu Kratz, and he is the ARES emergency coordinator for Bullitt County. He hasn't heard anything at all about it. He did say he would see if he could get any information and if so will pass it on to me.

Looks like we just wait and see for now.

1893. Ky Ham Bust Info From ARRL Letter

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: an343198@anon.penet.fi
Message-ID: <31a6f9bb.949847@nntp.ix.netcom.com>
Source record: 224608

This information is from the ARRL letter

TEEN HAM ARRESTED ON SCANNER CHARGES

Greg Godsey, KF4BDY, a 16-year-old ham from Hopkinsville, Kentucky, was arrested May 11 by local police who charged him with carrying a scanner that could receive police radio frequencies. His Radio Shack HTX-202 2-meter transceiver was confiscated. At a court appearance May 14, he was bound over for trial on June 4. The judge reportedly didn't hear any arguments concerning whether the law was broken, possibly because the arresting officer wasn't present.

According to reports, Greg, the ARES EC for Christian County, Kentucky, and a ham since last summer, was detained by Hopkinsville Police. The officer indicated that when he arrived, Greg "was talking on a radio that is capable of receiving police frequencies. I verified this by keying my radio, which broke the squelch on [Greg's] radio."

Greg denies the charges and says his radio has not been modified and cannot receive or transmit outside of the 2-meter band. He has sought advice from the ARRL in resolving the matter. ARRL Regulatory Information Branch Supervisor Norman Bliss, WA1CCQ, says the Kentucky law exempts equipment possessed by a licensed Amateur Radio operator that is capable of receiving police frequencies.

1894. This Week in Amateur Radio #165 (for air through 6/1/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RxGOKe7.sanderman@delphi.com>
Source record: 224609

Here is a summary of news items covered on edition #165 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 31-May:
-
1. Attendance Dips Sharply at This Year's Dayton Hamvention
2. Kentucky Teen Ham Arrested on Trumped-up Scanner Violation
3. "Ladies Home Journal" Article Calls Hams Illegal
4. ARRL Announces Latest Section Manager Election Results
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. Weekly Propagation Forecast with George Bowen, N2LQS
7. Paul, 5X4F, and Peggy, 5X4G, Leave Uganda Citing Security
8. Terry, W9JOO, and Art, N2AU, start "Island Hopper" DX Bulletin
9. "Amateur Radio Newsline" - Edition #980 from Los Angeles
10. FCC Release Provides Full Details of "Family Radio Service"
11. Army MARS Opens Message Traffic to Bosnia, Croatia, Hungary
12. New Parallel Processor Chip Perfected, Higher Speeds Planned
13. Anti-theft Software for Cellular Phones to Be Marketed
14. Prices for Dynamic Random Access Memory Chips to Drop in '96
15. New High Speed Chip for Analog Communications Developed
16. Harry M. Neben, W9QB, Former Tucker Auto Employee, SK
17. J. Jerry Freeman, W4JJ, Former Norfolk FCC EIC, SK
18. "The RAIN Dial-up" from Chicago
19. Special Event Station Calendar with George Bowen, N2LQS
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,

at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

1895. Callsign vs Location on VHF/UHF

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: avonlute@av8r.dwc.edu
Message-ID: <31a7048b.279235@nntp.ix.netcom.com>
Source record: 224610
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Hi y'all
I am about to enter the world of VHF/UHF weak signal work and have a question concerning how to use my callsign. My call is N4JVP and I am located in in one-land for the time being. My license paperwork does have my New Hampshire address so I am not a portable station.
How should I identify myself? Since I am not technically portable, I guess I shouldn't sign "N4JVP portable 1". On phone I can easily sign "N4JVP in New Hampshire" but what about on CW?
The reason for the question is I don't want to lose a possible QSO because the other op swings his beam toward 4-land and away from my true location. Am I worrying needlessly or is this a valid concern?
Additionally I wouldn't want a relatively local op to get excited thinking that the band is open when it is not.
In my 20+ years as a ham I have not spent much time on VHF/UHF and want to have a good idea of what is going on before I key the rig.
Your input and ideas are requested. If you respond via E-mail please also post your response to the newsgroup so that others may also benefit from your knowledge.

thank you and 73
Fritz
N4JVP

1896. WWV Information?

Newsgroup: rec.radio.amateur.misc

It ranks right up there with blocking cellular... There will always
be a way to transmit out of band, who cares if it's because a diode was
removed, or if someone purchased an old Motorola police radio at a surplus
sale... The problem of unauthorized out of band transmission will not go away
that easily...

I would support building 10M rigs and CB's so they cannot be modified
to go into the CB band or 10M band respectively.. This will keep the CB'ers
from buying ham rigs and converting them into CB's and keep the CB'ers off
of the ham bands...

Again, this won't eliminate the problem, but make a very small dent...

Why not Type-Accept VHF/UHF+ ham tranceivers?? Have you every compared
some of the specs from HAM vs Commercial gear?? On a particuar ICOM
2M HT, frequency drift is stated not to exceed 5 Khz...
That's equal to the deviation on the unit... A comparable VHF business band
rig that same figure was .05 Khz (If I correctly recall)... If that's what type
acceptance will bring, then I am willing to pay for it!

1900. FASC position: Drop CW from ITU Treat;y

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: 103520.355@compuserve.com
Message-ID: <4o7bp9$ajt@dub-news-svc-6.compuserve.com>
Source record: 224615

In response to Jim Reid:
Contrary to your statement, the FASC position as of this second is not to drop cw from the ITU treaty. The FASC paper is a "what if" document that addresses all scenarios, of which dropping cw is one. While your unrelenting joy as to your erroneous conclusion is noted, as well as your spamming of the net, clearly note that your conclusion is incorrect. In fact, the conclusion that you have drawn from reading an admittedly confusing document is very closely analogous to the "War of the Worlds" broadcast by Orson Welles in 1938.

The federal preemption, however, should cover the KY case if
the individual is a licensed ham and the radio in question is
a transciever such as the HTX-202.

>Jack WB3U

The prohibtion against listening to police is a state issue. This
case
in Kentucky doesn't make sense to me because the KY law
was amended several years ago and exempts licensed amateurs
from the prohibition. As I recall, the prohibition was focused
on mobile listening (as is the case in those few states that
prohibit such listening). If the case is actually involving
an amateur transceiver, even if modified, the federal
premption issued about 2 years ago by the FCC should
over rule the situation.

Here in NJ we had the 50 year old law chnaged so anyone can
mobile scan except when commiting a crime.

1903. Re: SURVEY: How long did it take you to pass 13wpm code test?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: leigh@rain.org
Message-ID: <4o5u24$1kp@news.rain.org>
Source record: 224618

I spent about two months of listening to 5wpm tapes before taking the Novice test. (I passed in one try.)

To pass the 13wpm, I first started out listening to tapes, but kept memorizing them, so I started doing on-air CW, mostly in the 15 meter Novice band. For me, listening to the variety of "fists" on the air, and trying to copy them under somtimes noisy band conditions, was much better practice than listening to the same old tapes. Also, as not being able to copy the other station is downright embarrasing, there is more incentive to copy correctly.

While I flunked my first 13wpm test, I did pass the second one, about 6 months after I started doing on-air CW several times a week. And I still love the 15 meter Novice band: when it is open, it has a very low noise and QRM level, plus many good "fists" sending in the 12 to 18 wpm range, as well as many DX stations.

One of these years I'm gonna go for the 20wpm/Extra test, but I'm in no hurry. I still try to make a few short CW contacts a month, to keep my 13wpm skill alive.

1904. Motorola HT-600

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-25 00:00:00 UTC
From: Les Butler <lsbutler@cris.com>
Message-ID: <31A75B4A.6CF7@cris.com>
Source record: 224619

Anyone know how to get an HT-600 to trnsmit out of band? I saw something here awhile ago about using the Motorola software and saving the file and then editing it through DOS and changing the frequencies and then booting up the software again and reload. This works to a point. When you disconnect the programming cable the radio constantly beeps telling you you have a programming error. Now when you read whats in the radio it shows you your out of band freq is in there, you just can't use it when your done.

Is there more to this mod?

Thanks...
Les

To: pcook@interealm.com
Subject: Re: Christain County Ham Busted (fwd)

Patrick,
Here is some more info I dug up last night. This case is 100%
political. Note that it is in Kentuckey. About 2 years ago, there was a
similar case where the ARRL and organized ham operators did intervene and
using political pressure obtained the variqance from the state law that
exempts hams from it. This has angered a lot of police and judges who feel
no Kentuckey citizen has to right to any scanner -- or two way radio. As
such, my sources tell me that the cops and judges are out to get the ham
exemption thrown out -- and "get even with the hams."
Also keep in mind that judges and police officers are not all that
technically swift. If they were, they would not have gone after a kid with
an HTX-202 (we confirmed that the radio in question is an HTX-202). They
thought they had an easy bust and an easy precedent to set -- and its going
to fall apart. The very latest I heard is that some three dozen hams tre
today planning to picket (they may already be doing so) the police station --
HT's in hand -- to draw media attention to the case.

From passing my 5 wpm to passing my 13 wpm took around 5 months. Of course, that was practicing with tapes daily and operating exclusively CW in the Novice bands. Now if I could just get to 20.

Why is it that if you disagree with what I have to say, you feel
compelled to call my employer? Do it if you must but you better be good
at it. If you do not kill the king, the king will kill you.

A man went to a guts store to get some guts for dinner. He sees a sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

Okay boys, you know I meant "voice as a radio communications mode"!!!
The fact still stands that voice (as a radio mode) is just about as old
as Continue Wave (CW) transmissions; both came along in the early 20s.

I just want to a little about KN4UE's so called "DX" node in Aiken,SC .
First off he does'nt care one bit about HF or DXing what so ever. So of course during Major contest he will shut down the node until the contest is over. He then claims to have no idea how it happens.
He also likes to think he knows better then the FCC. He has locked W8CNL and KC4ELO out of his node forever. He says we were conducting buisness. He got a second opinion on this from The Great Qsl Man W4MPY. Who does'nt have a problem taking QSL orders over packet, but has a problem with us de-bugging someones program. ???? Well, you see Wayne does'nt like W8CNL or KC4ELO so of course he did'nt have a problem with us being locked out. So now the KN4UE node has 1 DX'er that is able to check in and since he is a friend of ours, he is on thin ice.

I used to like the Heathkit concept of building your own electronics, but they dropped all their ham stuff in the 80's. I recently found out about Ten-Tec and would like to know if anyone has had any experiences with them. Are they a reliable company? Are their kits any good? etc.
Any info is appreicated.
Thanks.

Rick, it's great to hear skywave signals again on 6 meters: a few days ago I worked three CO and one NM stations from my Southern California/DM04 QTH.

I'm strictly a "small gun" on 6 meters: 10 watts SSB into a Cushcraft Ringo Ranger, but any more power would probably cause TVI complaints at my apartment house. My current 6m rig is an Icom 560: it is a little antiquated with coarse tenth-kc steps on SSB, and "volatile" memory, but it is very stable and easy to use. (It replaces a 3 watt Icom 502 SSB/CW rig, which I managed to work 5 states with last year.)

73 and hope to catch you on 6 meters. --Leigh/KM6JE in Santa Barbara/DM04.

Hi gang:

Here's the latest on that case in Kentucky......

Patrick

---------- Forwarded message ----------
Date: Fri, 24 May 1996 12:55:16 -0400
From: BillWA6ITF@aol.com
To: pcook@interealm.com
Subject: Re: Christain County Ham Busted (fwd)

Patrick,
It took four days, but I descovered the case and what actually happened. It was buried on the Kentucky State Wire and not available in California. A friend got it for me.
A 16 year old named Greg Godsey - no call sign provided -- has been charged by a police officer with posessing a radio capable of receiving police frequencies. The officer admitted that he was aware of a state law that exempts ham radio operators from a state ban on scanners but the Christain County Police and judges want to challange the exemption and are making Godsey a test case.
The radio in question has been certified as not having been tampered with and incapable of receiving police frequencies, but the judge has denied a motion to dismiss and set trial for June 4th.
I tried to speak by phone with the arresting officer or a spokesperson for the police and was treated rather abruptly. They simply refuse to talk and hung up.
As of this moment, my contacts at Tandy say they know nothing about the case nor has the company been approached to testify in Godsey's defense. The ARRL still refuses any comment albiet the ARRL Letter editor is aware of the situation and plans to report on it. I do know from past pronouncements that ARRL policy is not to provide direct legal assistance EXCEPT in precedent setting cases. As most of the leaders of the ARRL -- including its President and a number of BoD members are atorneys or judges -- I suspect that this wll be an exception to the rule.
One other side-bar. I hace no talkd directly to any of the principals in the case but I hear through others that hams in the area are now showing their negative feelings on this by openly carrying radios omn their belts -- waving them at police -- and chiding them about arrresting a kid who is a volunteer public servant. Many plan to be at the next hearing -- radio equipped -- as a protest. If this is true, hen others may wind up in the same position as this Godsey if the police decide to do a power play as they now must to save face.
That now answers the "who, what,why, were and how" -- and also tells me

that the "rotten stuff" is with the police. At least it smells that way out here.

de Bill
P.

>think we had 4 hrs/day for either 2 or 4 weeks

i don't know about the USN, but the USMC, in their battery of aptitude tests, had one specifically for the 'CW gifted'. i assume this had a good correlation as far as picking out recruits who could master CW in a short time.

i showed no aptitude, BTW. years later, i proved this to my satisfaction. it took a very intense month for the 5 wpm. two years later, it took an hour or two a day for about three months for the 13 wpm. i don't see 20 wpm happening in this lifetime.

However, the context of the newsgroup name is set by the "rec.radio.amateur"
prefix, which _does_ place it firmly in the context of amateur radio.

>We aren't talking about the radios, we're talking about the name for a
>newsgroup.

...about one facet of amateur radio.

>However, far more important than the above is the point that there isn't
>yet a proposed newsgroup for the name you are all fighting over with
>such vigor. There isn't even a pre-RFD for the newsgroup over which
>you're arguing.

If Jeffrey Herman is correct and it was submitted to Dave Lawrence, then
there was an attempt to do so. I'm not sure I agree with the proponents'
response to his initial rejection, but I don't see it as an unreasonable
one.

>Worse yet, you're generating hostile reactions from the very people
>whose support you wish to gain. That's tactically unsound.

This much I agree with, and have repeatedly stated.

To the proponents: Please stop flaming. The people who object to the name
are doing so out of neither malice nor stupidity (which is not the same as
ignorance - they're uninformed about the use of the term "boatanchor" in ham
radio), but out of a genuine desire (which I share) to keep the Usenet
namespace useful to people who are uninterested in a particular group as
well as those who are interested in it. Flaming them as "outsiders" and
painting them as meddling busybodies, as you have been doing, is completely
inappropriate and will generate nothing but more opposition now and NO votes
when the group comes up for a vote. The more you do it, the harder it will
be to get the group passed.

Morse code was includedinn a battery of tests given during boot camp.
They gave us headphones and shot 3 characters at us for what seemed like
30 minutes. It's been a long time ago, but I think the 3 characters were
'M', 'N' and 'O'. We kept the headphones on for a Sonar test and,
although I don't remember what they transmitted for that, but I didn't do
as well on it.

I think the only reason they allowed me to go to an 'A' school (since I
had just turned 17) was because I got 100% on this test (I'd been an SWL
and had at least part of the code memorized), otherwise I'd've been out
scraping paint: IBM we called it - Instant Boatswains Mate.

Does anyone know how to remove the restrictions on the radio so you can transmit on all the freq. you can recieve on ? It's really annoying to be able to recieve all those freq but to be able to transmit on only a select few. I know there is a reason for the restrictions, but I am not sure what it is :)
Thanks in advance

How about "N4JVP/1" on CW, or "N4JVP slant 1" on phone?
You could even, if so inclined, include your grid square in ssb CQ's
without too much trouble. On CW, the "/1" will do the trick.

Hope to chat soon -- I also move to NH in a few weeks!

Maybe not running an illegal 27 MHz rig would be a good start. Get a
legal radio and try a 5/8 wave bumper mount. There should be something
CLOSE to the bumper that's grounded that you could run a heavy strap
from the antenna mount to.

: From 5 to 13 WPM 14 months.

interesting. I'm in a similar position. It took me about 4 months to
get to 5 words per minute. I then wasted 6 months of daily practice
and three failed 13 word per minute tests before I gave up trying for
13 about 10 years ago. Last year I to discovered that I have a common
neurological condition that affects the same short term memory that CW
exercises.

maybe I could learn higher speed code if I spent years at it but it's
not worth it.

Hi George, it matters not, since the number is not
indicative of location anymore. What with vanity
calls, it's only a matter of time until the
correlation drops below a useful value. What would
be more useful is a suffix indicating the state, e.g.
W6RCA/AZ. Whadaya say? Let's start a new convention.

Hi,

Ham Log 3, the Ultimate Ham Radio Logging program, is currently available at the following FTP sites on the Internet. This is the latest functioning demonstration version of Ham Log, in its fifth year. The sites directory names have changed since the last upload, so please take note.

oak.oakland.edu - /pub3/hamradio/dos/logging
ham_log3.zip is the only file available

ftp.funet.fi - in directory /pub/ham/hf-log
ham_log3.zip and ham_log3.txt

If you haven't seen Ham Log 3, then do yourself a big favour and get your copy.

Ham Log is a professional program that has a enormous facilities and functions, yet very simple to use. Reviewed in The Canadian Amateur magazine:

"This is the first computer program I have used in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to this fine hobby, ranking with Baycom, JVFax and Hamcom."

The new version is also available in a "CB" version.

NO one can tell from the name "homebrew" or "misc" whether the
"homebrew" people are making radios with lemons and scrap metals of
different valences and coconut shells and thigh-rolled wire drawn
on a home-forge and insulated with tarred cloth and Galena detectors,
and is religiously offended by the mere SIGHT of a microcontroller,
OR, whether the homebrew group just builds their own equipment and
LIKES microcontrollers real much and it's REALLY the "misc"ellaneous
people who ONLY *BUY* radios and *NEVER* fix or modify them and don't
EVER wish to be bothered with "hardware problems or technology" or
especially those damned impossible difficult BASIC Stamps!!!!!!
Do you get the picture now?? I have had conflicting email on WHAT
these groups want from their own fucking MEMBERS!!!!

I'm not going to waste *MY* time reading the other people's 14,000
other overly-verbose charters on Usenet to solve YOUR problem!! You can
FUCK yourself! YOU *MIGHT* have TRIED to explain all that in three sentences
that would have solved this days ago, had you not been a knee-biting
asshole! But you elected to play one-ups-man-ship instead!! Either
inform people when you speak, or come blow me, you moron!!!
-Steve

It took me about 9 months to go from 0 to 5 wpm, but not because of any disorder. The problem was that the Boy Scouts taught us Morse Code, but by using flashlights with a button on-off switch. When I tried to switch to sound, there was an extra step in the decoding.

Took an additional 8 months to get to 13 wpm. But, by that time, I'd decided I liked it. At one point, I could do 35 wpm, but have become inactive of late. Suspect my skill has deteriorated a lot.

>from the prohibition.

When did it become acceptable in the U.S. for individual states to
require a license to *listen*? Even a ham license only grants
permission to transmit. Isn't the right to listen presumed to be
inherent to each individual?

>Here in NJ we had the 50 year old law chnaged so anyone can
>mobile scan except when commiting a crime.

Then it's just another useless law that needlessly violates
individual rights. It wouldn't even come into play unless a crime
could be evidenced, in which case, the penalties attached to the
crime itself are all that's relevant.

It's too bad all laws aren't required to pass a test for
Constitutionality *before* they're placed on the books, or that
politicians who introduce this garbage can't be held personally
liable for victims' damages.

The ony thing that's obvious about CW is that it was instrumental
in preventing the Amateur service from becoming another Citizens
Band. It takes more than blood to maintain the quality of the
service.

Wrong. The body you're thinking of is the ITU, but the fact is that any country can decide to ignore the ITU Radio Regulations. There are many examples of this -- Japan's no-code HF license is one, as was the decades-old practice of the BBC of using fixed service HF frequencies (such as 7325, 9410 and 15070 kHz) for broadcasting.

Lets see if I got this straight: A cop in Kentucky decides to bust someone he finds has a VHF transciever with him in his car. The cop knows about the ham exemption in the state's scanner law, and realized that the person in question is a ham. But the cop decides to ignore that law and bust the ham anyway.
The radio, a Radio Shack HTX202, is examined, and is certified as not being able to transmit OR recieve on any police freqs. But the judge decides to press the matter anyway. Dispite the ham having two valid "outs" here: the ham exemption in the scanner law for radios that can recieve police freqs, and 2nd: the radio in question doesn't even have the ability to recieve police freqs anyway.

What did I miss here? I must have one or more facts wrong....

Listening to 80 metres, or two metres, for that matter largely dispels the myth that knowing CW equals quality. We've had a digital ticket here for almost twenty years, and don't see any corresponding decline in the service that can be traced to digital operators.

There is a declining standard of civility, and in the manners observed on the air, but those with higher classes of licenses are just as likely to be jerks as those without code.

Whether one does, or does not, know Morse Code, has nothing to do with the quality of the operator. Or the service.

You're entitled to your view that CW ought to be maintained as a necessary entrance barrier - although I disagree with it - but I really do take issue with the idea that it takes CW to be a quality radio service.

SB DX @ WW $OPDX.255
Ohio/Penn DX Bulletin No. 255

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 255
BID: $OPDX.255
May 27, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, AD1C, W1YY, WA4VCC, N8AC, W9UI, DF4RD, DL3JSW, DL7VOA, DL9GOA & DX News Letter, DL8OBC, G3NOM/JA1UT, G4BUE & DX News Sheet, OZ8RW and XE1L for the following DX information.

3A, MONACO (and SEBORGA). Ralf, DL3JSW, who is part of the HB0 team listed below, will travel here during the week on July 14th. He will try to obtain a license for both 3A and Seborga.

3Y, BOUVET. Luis, XE1L, (at the Dayton HamVention) reported to your editor that the South Sandwich Island DX Group (SSIDXG) will be going to Bouvet sometime in December 1997/January 1998. Naturally, this will be a full scale operation. Details will be forthcoming.

5A1A CARDS APPROVED FOR DXCC CREDIT. Your editor talked to Bill Kennamer, K5FUV, DXCC Manager at the Dayton HamVention, and he has confirmed that the 5A1A cards (by the Ukrainian DXpedition and the Libyan nationals) are now accepted DXCC. DXers from around the world received this exciting news just before preparing for the Dayton HamVention. For DXers who attended the HamVention, this announcement turned out to be extra special thanks to efforts by Dan, W4BRE, to make arrangements for Toly, UT3UY, to attend Dayton. Toly was present at the Friday night, SWODXA DX Dinner Bandquet. He announced that he had the 5A1A cards/logs (on computer) with him and would pass out cards after the bandquet. Toly also made an extra effort on Saturday (at the N4AA QRZ DX booth) to personally hand write each QSL cards for the deserving.
For those of you who held off QSLing until the 5A1A got accepted for DXCC credit, Toly states you can QSL directly to him (for the Ukrainian operation): Anatoly Kirilenko, P.O. Box 439/3, Kiev-151, 252151, Ukraine. Toly also mentions it is better NOT to send more than one or two green stamps in an envelope going to the Ukraine (And no callsigns showing on the outside of envelope!). If you QSLed to the LZ or the OM quite some time ago, you do NOT need to re-submit. Those cards will be answered.

Donations for Toly's hardship in putting on this DXpedition and his efforts which have got the ASSAKR Club Station accepted, can be sent to W4BRE, with checks made out to "5A1A DXpedition" or "5A1A." All funds go to Toly!

9H, ISLAND GOZO (MALTA). Felix, DL8OBC, and Matthias, DL4OCL, have decided to return to the Island of Gozo, the second largest of the Maltese Islands in the Mediterranean. Their operation will take place July 22nd to August 9th and use the callsigns 9H3UD and 9H3UF. They will be active on all HF bands from 80-10 meters, including WARC bands, especially emphasizing CW operation with some SSB activity. They will be active participation in the IOTA Contest (July 27-28th). They are seriously considering taking along equipment for the digital modes and satellite operation. QSL 9H3UD via DL8OBC, Felix J. Riess, P.O. Box 1253, D-30984 Gehrden, Germany. QSL 9H3UF via DL4OCL, Matthias Deutscher, P.O. Box 100412, D-30942 Ronnenberg, Germany.

BV, TAIWAN. The DXNL reports that BO1/JP1RIW will be active from the Ma-Tsu Islands (IOTA AS-113) between May 31 and June 2. QSL via BV2KI.

C6, BAHAMAS. Robert/K4MQG, William/AA4R and Ted/WA4VCC will be going to the Grand Bahama Island from June 7-14th. They will be active on 6m, 2m and 432cm and HF. The station will be very active during the ARRL June VHF Contest, June 8-10th. The Grid Square is FL06 and has not been on VHF for quite sometime. Their antennas will be atop a 3-story condo building located right on the ocean.

DXCC NEWS. This may be old news, but since there was no bulletin printed last week and there may be a few who have not heard, the ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), has received a 9 to 7 recommendation from the DX Advisory Committee (DXAC) to make no change in the status of Mount Athos on the ARRL DXCC Countries List. The Awards Committee reported an unanimous vote to MSC in support of the DXAC to make no change at this time. Since the DXAC and the Awards Committee are in agreement in their recommendations to the MSC, the matter is decided.

HB0, LIECHTENSTEIN. Another group (besides the French group listed in OPDX.253) has announced that they will active during July 14-27th. DL1JBN, DL3JSW and DK5YY will be active on HF bands, while DG0JAG, DG0JS and DG0OKA are active on VHF and the satellites. The two groups will concentrate during the first week on VHF and the satellites and during the second week the activity will turn towards 160-10 meters.

IOTA NEWS.... The Italian Midway Dx Team, which is devoted to IOTA activity, will be active from islands of IOTA EU-050 Group (Tremiti). Operations will begin on May 31st to June 2nd, with activity on 40, 20, 30, 17, 15 and 10 meters SSB. Operators will be: IK6VGO, IK6JOT, IK6PTH, I6JSH and IZ6ADX. Each operator will use his own call with IL7. The following islands and rocks will be activated: Cretaccio Is., S. Domino Is., S. Nicola Is., Capraia Is. and Scoglio La Vecchia. QSL via IK6MWK.

PACIFIC DXPEDITION. Yuu Yoshitani, JA3IG, will be active from three different islands over the next couple of weeks. Yuu-san will be operating as follows: May 28-30th as 3D2JA (Fiji), May 30-June 1st as A35IG (Tonga), June 1-4th as ZK2YY (Niue) and June 5-6th as A35IG (Tonga). Yuu-san likes to operate mainly 40 and 20 meter CW. Check around 7005 kHz and 14025 kHz.

OX, GREENLAND (Attention 6 meter enthusiasts!). Peter, OX3XR, is now active on 50 MHz. His QTH is Nuuk (Grid GP44DD). Peter is stuck on one frequency, 50.110 MHz, with a fixed yagi antenna and 60 watt transmitter located at the club station which can be remotely controlled by a two meter HT. To give all a fair chance of working him during the summer, he will alternate between having the yagi pointing towards Europe and North America. Peter brings the HT with him at his job, so he can also monitor the band during working hours.

PALESTINE. In a recent update press release by Ray, G3NOM, he mentions that the JA1UT/JA3UB group are planning another visit to Palestine in late June/early July 1996. ADDED NOTE: OPDX InterNet subscribes will receive an additional bulletin which will contain this interesting press release.

QSL UPATES... QSL cards for the CT3/DL7UTM DXpedition are finished and will be sent out soon.... The NODXA Berlin group reports the first 6000 QSL cards for the Congo-DXpedition (TN2M/TN4U) have already been sent out. The QSL cards to be sent throught the bureau are still in the printing process. As soon as they are finished they will be sent. PLEASE have patience as they will ALL be answered 100 % .....

SV5, DODECANESE. Manfred, DL8SET, will be active as SV5/DL8SET from the Island of Rhodes from June 6-20th. Operations will be on HF and VHF (6 meters). QSL direct via Homecall or via bureau.

VU7, ANDAMAN ISLANDS. Well known DXer Jim Smith, VK9NS, who at the HamVention and SWODXA DX Dinner Bandquet, announced he has received his Indian license which is valid for 5 years. The W.P.C. were kind enough to issue him VU2JBS which contains his intials. He also mentioned that he believe the permit to import the equipment being donated by the Herard Island DX Association (HIDXA) to Mani, VU2JPS, has now been mailed to his home on Norfolk Island. Jim stated that he plans to return to the Andamans in July or August of this year subject to various factors.

ZK1, SOUTH COOK ISLAND. The DXNS report Bruce/AA8U, Stan/K8MJZ and Marilyn/AG8W, will be active July 11-21st. This time frame will include the IARU Contest. They will operate from Rarotonga Island as ZK1AAU in the contest and ZK1MJZ and ZK1AGW outside the contest. There will be an all bands effort with priority on 160 meter outside the contest. Cushcraft is sponsoring the operation with antennas and equipment. This group will not join DX nets or lists and requests full calls only. QSL to AA8U.

ZS8, MARION ISLAND. A fews reports indicate that Chris, ZS8IR, has been active. On May 21st, he was reported active on 3799 kHz around 1345z and

2100z. On May 18th, he was heard on 14195 kHz around 0700z. He will be there until June, 1997.

>Cantonese for instance. Seems you've got your principles knickers in a
>knot!

English is the international language. Most Europeans know English.
Maybe someday I will learn Cantonese, much more useful than CW.

>It's not so much "whiners" as "whingers" who can't get their own way as
>minority group.

What is a whinger? Not in my webster dictionary.
I got my way, got my general in spite of distate for CW.

Whose the minority group? No Code Techs are growing by leaps and bounds,
while HF Hams are dropping like flies. My guess is the average age
of hams on HF is 70, and rising yearly. No Code Techs will rule all
the airways in a very few short years. CW will be dropped without a doubt.

>If you don't like it then "get out of the kitchen!"

Don't like what? I paid my dues. I earned the right to complain about CW.
I was forced to learn CW if I wanted to get my HF voice priveledges.
I learned it, hate it, don't see a need for it, it shouldn't be a requirement.
And I don't take kindly to old farts who get thrills by needling no-code techs.
If you don't like my opinions ... deal with it.
I'm on HF to stay whether you like it or not.

>Cheers....Mike

I find several things quite interesting in Burt's post. He
speaks of those responsible for millions of others deaths and yet his
sig threatens that he will kill. (I assume he refers to himself as the
king.)
Who else besides Burt attributes the Nazi pogroms to German
hams, especially German hams who were not even alive at the time? Yeah
that makes sense!
The world stood by and watch as these pogroms were set in
place and took no action. When action was taken, it was in response to
Germany's military aggression and not because of the Nazi party
pogroms. Some blame the German citizenry for allowing the genocide to
occur. It was well after the start of the war, pick a year 1939/1941,
that the concentration camps changed from slave-labor camps to killing
factories.
As the reality that Germany was going to lose the war set in,
the SS-run camps accelerated their efforts in an attempt to erase the
evidence of their actions. (The officers of the SS were Nazi party
members by requirement unlike those in other branches of the German
military.)
Burt would probably argue that the German citizens as a whole
stood by, unmoved, as this occured. Perhaps he thinks that the events
were published daily in the German media during this period. In

reality, Goebbels and the Ministry of Propaganda tightly controlled the German media and the truth was not known, only rumored. The average German citizen had as much knowledge of these events as the citizens of the other countries around the world.
So who is at fault. Could it be America? An earlier entry into the war would have denied Germany the opportunity to build its resources but America stood by and watched (aid to England withstanding) for over two years until Japan forced America's hand. Could it be the Russians, they did have a non-aggression pact with Germany? Could it be the Italians and the Japanese who were aligned with Germany?
Action is still being taken against those assumed responsible, the Lileikas case as an example. And yet Aleksandras Lileikas is not a German, he is a native of Lithuania. Many parties who have been found to be responsible by international law were not Germans.
The Holocaust represents a one of the grimmest periods of mankind, something that we should never forget and should never allow to happen again. Unfortunately it has in Uganda and other African countries along with some countries in eastern Europe.
Genocide is a crime but it is also a crime to hold the sins of the father against the sons.

Source record: 224586

I bought two GP300 Motorola Eurno Radios, Model # P94YPC09C2AA at the Dayton Hamvention. I was told by the guy who sold me those units that they could be converted to GP300 standard, or programmed so that I could use them. They are 16 channels and only two channels are programmed, but not on the frequencies I need for my volunteer fire dept.

I have no Motorola Dealers in my area, the one I called in the town closest to me, stated that he couldn't change them.

Please will anyone who knows of a place I can have the radio's programmed e-mail me with information. Thanks in advance.

Hi Ed, Don't the Japanese have *very* severe restrictions which are
quite similar to the limitations we supposedly impose on 11M operators?
(Low power, limited distance contacts.)

> as was the decades-old
>practice of the BBC of using fixed service HF frequencies (such as 7325,
>9410 and 15070 kHz) for broadcasting.

Please correct me if I'm wrong, but I don't believe the BBC maintains
transmitters in Region 1; their sites are located in Regions 2 and 3.
Now 7300-8195 and 9040-9500 are alloted to Fixed Services and 15010-15100
is alloted to Off Route Aeronautical Mobile in Region 1. Do Regions
2 and 3 have these same allocations for those services?

Just posted a JPG picture file (in uuencoded form) in the newsgroups
alt.binaries.pictures.misc and alt.binaries.pictures.12hr

The picture shows several "pencil" sub-mini tubes, along with a
pair of regular mini tubes (one a 6AK5) for size comparison. Most
are filament tubes by Rayethon, and 3 of the really skinny ones are
detector diodes (with heaters).

These sub-mini tubes (along with compactrons) probably would have been
the next wave of tubes to hit the consumer electronics area, if transistors
were not developed. Imagine an audio pre-amp made with pencil tubes.

Also posted a picture of 25 to 30 year old radios.

>-Dan (N3XJN).

Dan,
I wasn't aware that Ten-Tec was making kits, but I can tell you
that their customer service is number one. I bought one of their
Titan amplifiers a few years back. The power supply went to
lunch after a contest, so I called them. They sent me a new power
supply at their expense (overseas) no questions asked. About a
year after the warranty was over, I noticed the blower was getting
a bit noisey, and wanted to lubricate it. Couldn't find anything about
how to do it in the manual, so I called them again and was told
the blower couldn't be lubricated. A few weeks later a new blower
arrived in the mail, again, at no charge. The Titan is a first class
piece of gear, and so is their service, so I wouldn't worry too much
about the kits.

There is a modification book for Icom Kenwood and scanners
printed by:

Art SCi
POB 1848
Burbank CA 91507
818-846-2298

It is available in most ham stores.

It has modifications for the TM241A and many others. I used their
instructions to mod a TM231A and it worked great.

I can see it now. Some Boss Hogg type police chief says "boys, y'all
find me some young punk. We'll make him out to look like one of them
there cerputer hacker types. When the boys up in the capital find out
that he done broke into our radidios, we'll have us ourselves a case."
And they just might have if the kid had anything other than an HTX-202.

Having grown up just across the border from Kentucky, I remember how
tough they use to be. But I've seen some smaller municipalities here
in Ohio where it is legal that act just about the same way.

This case has the potential to affect all of us. Each one of us should
do everything we can to bring as much attention to this as possible.

I wonder what Det. Fuhrman is doing now? Maybe he planted the bloody
HTX-202 on an innocent bystander just to frame him. Hmmm....

Mr. Fisher,

Maybe if we foreward your post to the Civil Rights Commission they can
contact your employer and get some action.

How about we all foreward a copy of his post to Senatory Kennedy's
office. Things tend to happen during an election year.

How about sending a copy to the Boston Glode news paper.

^^

Well it took me about 2 months to get from 5 to 13, and that was 15 years ago. Recently it took me 2 - 3 months to get to 20 wpm, I
operate on CW about once every two years! I suspect that I will use my extra privilages as must as I have used the Advanced,
(3 times in 15 years). Why did I do it ? Just to have the personal satisfaction that I did it!!!

1988. Wanted: Alinco 1200 service manual or help

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-27 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <4oc7p5$3cp@server2.dakota.net>
Source record: 224451
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello,

Yesterday when I turned on my Alinco 1200, it seemed to be dead but on closer inspection the radio worked OK but all of the panel lights are out. Actually when I first turned it on, one of the lights seemed to be on, but very dim and later all were out.

I would be willing to buy a service manual if anyone has one. If anyone would be willing to share their knowledge/experience or look up what I need that would be good too. Is there a micro-fuse inline with the panel LED's? Are they connected in series so that if one is out, they all go out? Has this happened to anyone else? I took it apart but could not spot any problems. Everything else seems to work. Please Email rather than post responses. Thanks...

Hi Jim, What were you planning on doing with the already-licensed folks?
You have to state how you'll grandfather them into the above scheme.

Jeff KH2PZ

I would like to think that 6 meters should "stimulate HF interest".
Not sure about your Novice class in the US but up here in Canada, the
"Basic" licencees are too busy crying the blues about CW to take notice
of the excellent conditions that 6 meters can yield with Es not to
mention world-wide F-layer skip when the cycle picks up again.
Much like 10 meters ! I'd prefer they keep things as they are and let
the Basic people utilize the privledges they alreay hold and try out 6m
to get a taste for HF-like operating.

This keeps coming back to the same old thing..."Give 'em an inch and they
want a mile". Here in Canada, the regs were laxed to allow more people
to get a "foot in the door" Basic licence with the intent of having that
"stimulate their interest" in Ham radio with the hope that they would
carry on their studies and go for the full privledges (requiring CW!)
since their appetites had been whet.

And once CW is abolished from HF testing, it will be something else that
holds back another crowd of wannabees who can't face the newer hurdle.

Am I right or what ?

If I read you right, we old hams that are just plain general
would loose a lot of privlages. We would have to study and
pass more tests to keep what we have. I for one have digital
equipment that I have no intention of throwing away just
because of liscense structure change. If I read you wrong
then I apologize. I have been general for over 25 years now
and am getting to a point where I want to enjoy what I have
and not start worring about trying to study again and pass
more test.

> from 5wpm to 13 wpm 3 months

Didn't see the original post on this, so used yours to piggyback on.

I took my novice test and barely scraped by the 5wpm in about May of 1960. The ticket was issued in June of '60 and I got on the air and used it immediately. When I say I scraped by, I really mean that I think he "let me have it". It was pretty bad. However, by September or October of the same year, I took the test from the same person (conditional back then) at 35wpm and passed it with flying colors. It was a matter of getting on the air and using it, kinda like typing. When I got on amtor and tried to stay ahead of the typeahead buffer, I nearly doubled my typing speed.

By the way, one thing that really helped me along the way was a guy who refused to QRS for me. He replied to a CQ of mine and was a little fast. I asked him repeatedly throughout the QSO to QRS. Each time, I swore he went a little faster. By the time we got done with the contact, I had increased my code speed substantially. I did a lot of listening after that, and copied everything up and down the band. When I wasn't doing that, I was sitting with the hand key, listening to and trying to imitate the perfect CW of the NPG naval beacon that was so strong at 4001 Mhz. This helped the fist quite a bit.

I also have to thank K7LPZ for pushing me further along. Does anyone know where Donna is these days? Last I heard, she had a VE7 call. Haven't heard from her for about a decade.

"I want" rather than "I need" or even "I would like to have"

: >Then perhaps you should address yourself to learning foreign languages.
: >English being a minority language. Surely "voice" would include
: >Cantonese for instance. Seems you've got your principles knickers in a
: >knot!
:
: English is the international language. Most Europeans know English.
: Maybe someday I will learn Cantonese, much more useful than CW.

No, English is *ONE* of the international languages and Europe (plus the
USA) do not comprise the world. There are other folks out there.

"Maybe, someday"....or maybe never or maybe......

: >It's not so much "whiners" as "whingers" who can't get their own way as
: >minority group.
:
: What is a whinger? Not in my webster dictionary.
: I got my way, got my general in spite of distate for CW.

Webster's dictionary isn't the single definitive authority on international
colloquial words amd idioms. I'm sure someone on the net, especially from
Oz (Australia), will suitably define it for you. They have a favourite
expression of "Whingeing Poms"

"I got my way"...spoilt brat, eh?

: Whose the minority group? No Code Techs are growing by leaps and bounds,
: while HF Hams are dropping like flies. My guess is the average age
: of hams on HF is 70, and rising yearly. No Code Techs will rule all
: the airways in a very few short years. CW will be dropped without a doubt.

Yep, we're fast approaching the next phase of Darwins theory of evolution with the loss of speech as a communication medium. I notice some of the younger members of my own race already reducing the vocabulary to a series of grunts. It sounds quite digital. Perhaps they're advanced "techies".

Your guess at the average age of HF hams is based on conjecture (bullshit to you...as a "techie" expression) rather than fact. I am, however open minded to any facts you can provide to corroborate your (apparently) wild guess.

At the first EMP during the next global fracas, there 'aint gonna be any "no-code" communication then it'll be back to hill top beacon fires and Aldis Lamps...the second coming of Samuel Morse's code plus the return of Semaphore.

: >If you don't like it then "get out of the kitchen!"

: Don't like what? I paid my dues. I earned the right to complain about CW.
: I was forced to learn CW if I wanted to get my HF voice priveledges.
: I learned it, hate it, don't see a need for it, it shouldn't be a
: requirement.

I have no quarrel with your freely expressed point of view and the right to complain about the conditions required to obtain a licence but I will always take exception to any aggressive anarchic activity to achieve minority objectives......or do you find the principle of democracy distasteful?

: And I don't take kindly to old farts who get thrills by needling no-code
: techs. If you don't like my opinions ... deal with it.
: I'm on HF to stay whether you like it or not.

If I need thrills, I'd hardly be looking to the Internet or ham radio as a source.....not unless I was content to set really low expectations.

As to your opinions, well all I hear an resentful young anarchist, wet behind the ears, with the ink on his licence hardly dry, trying to bulldoze his immature beliefs on others without constructive debate. I know cos I did it myself in the dim and distant past. That doesn't justify it as a principle however.

Thus your opinions are not worth dealing with in terms of their comparative importance to other day by day situations which attract my undivided attention and if that needles you....well, tough, that's life, it can be a bitch!

And by all means stay on HF and anywhere else you're entitled to be. I haven't even given thought to whether I should like it or not. In fact, I'm rather underwhelmed by your vociferous resentments.

Meanwhile, I'm quite content to be "an old fart", it's quite a peaceful period in one's life. It is a pleasant enough scenic journey on the river of life.....until I eventually get to that waterfall! You might even get to enjoy it yourself one day.....give or take continuing good physical and mental health, control of the misuse of "techie" annihilation weapons by the self diagnosed aggrieved and a return to a state of placid co-existence away from "(something or other) rage" otherwise we may all go over the waterfall.....together!

Do have a nice HF, CW free day, whatever!

Cheers....Mike

Hi Ed, Don't those Japanese with the no-code HF ticket have *very* severe restrictions which are quite similar to the limitation we supposedly impose on our 11M operators? (Low poer, limited distance contacts)

> as was the decades-old
>practice of the BBC of using fixed service HF frequencies (such as 7325,
>9410 and 15070 kHz) for broadcasting.

Please correct me if I'm wrong, but I don't believe the BBC maintains transmitters in Region 2; their sites are located in Regions 1 and 3. Now 7300-8195 and 9040-9500 are alloted to Fixed Services and 15010-15100 is alloted to Off Route Aeronautical Mobile in Region 2. Do Regions 1 and 3 also have these same allocations for those services?

>Took me one year.

Lemme see...I sat down at the desk in the New Orleans FCC Field Office testing room. They played the 20 wpm tape, and then the 13 wpm tape. I think it took five minutes for the 13 wpm tape. Yeah, that's the ticket...it took five minutes....yeah....five minutes...that's it! :)

Actually, when I took my Novice exam I was already doing 7 wpm. After I received my ticket I got on the air every day, save two or three because of inclement weather. But I made at least two cw contacts a day every day and it probably took two or three months for me to break 13 wpm.

It was actually eight months later that I was sitting in the New Orleans testing office to take the General exam but I copied the 20 wpm exam with no problem. Only problem was I wasn't there to take the Extra exam so the 20 did not count. They took my paper and made me start fresh for the 13 wpm exam. Go figure! If I could copy 20 why couldn't I have had instant credit for 13 then? Hehehehe. That's water under the bridge.

For other reasons, which included my obstinance and initial distrust of the VE program, it took another eight years before I got my Extry ticket. Yes, I said Extry.

Cheers! de jim, wk1v

Ted,

I had a box of oranges once. I was told to count all the oranges and
then provide the total. While counting, I noticed an apple within the
box. Was I to include the apple as part of the orange count? I mean,
do 57 oranges and 1 apple make 58 oranges?

Point is, punch cards, driving, what have you...are not amateur radio
modes, and have nothing to do with an "outdated" amateur radio mode.
Therefore, they are invalid comparison tools.

I could care less if code stays or goes, I use it and will continue to
use it. But, if there are going to be an arguments until things
change...make your points valid.

P.S. Punch cards may still be used in some places. I hope you never
run into the situation where they ask for your help with them...they
are only outdated by those who have kept up with technology.

Cheers! jim, wk1v

We've added a directory of Amateur Radio Equipment specification datasheets to the Ham Radio Online web site at:
http://www.accessone.com/~vbook/hronline.htm

This directory is a large list of pointers to detailed specifications for all new Amateur Radio gear being manufactured today. If you are in the market and looking for just the right radio for you, take a look - this will help you narrow down the choices for the radios that meet your requirements.

Ham Radio Online is self-supported (no ads) and just happens to be the coolest, award winning Amateur Radio web site that looks like a magazine. We feature original stories, newsletters from around the world, in depth real-time propagation, auroral and meteor scatter reports, real-time disaster conditions and much more. Stop on by and have a visit. Let us know if you have ideas for other Amateur radio related items that we should add to our web site.

Thanks and 73,

> Extended Coverage High Frequency Transceivers
<--- rest deleted ---->

I have modified my ICOM 735 to transmit "out of band". Why? Because I'm in process of completing the Ten-Tec 20m to 6m transverter kit. The transverter is capable of handling a broader frequency range than merely 14.000 to 14.350 input (50.000 to 50.350 MHz output) and it is my desire to operate on 6 meters over a broader frequency range than a stock 14.000-14.350 MHz coverage would allow. The transverter can operate probably up to 52 MHz - by operating the HF rig in the range fo 14.0 to 16.0 MHz.

The FCC is aware of problems with numerous "boot leggers" operating especially in the 26-30 MHz range and sometimes beyond. These are the notorious "CB" outbanders who often use modified ham radio equipment.

As I have detailed above there are legitimate uses of modified Amateur gear for use in the Amateur Radio Service, including MARS, CAP and transverter operation.

Let's hope that this press release does not turn in to an Notice of Proposed Rule Making issue.

2014. MFJ-259/AEA-ISOLOOP/MFJ-1621

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-27 00:00:00 UTC
From: Jonathan Helis <kb5iav@popalex1.linknet.net>
Message-ID: <4ob94m$j2k@news.linknet.net>
Source record: 224507
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have an MFJ-259 antenna analyzer that I use to tune up my AEA-Isoloop and MFJ-1621 54 inch whip antenna for HF.

The problem is that I don't get an accurate reading on the 1621. Example: Yesterday, I adjusted the 1621 to an SWR of 1.2:1 on 40 meters(something I have done many times before at another QTH), but when I hooked up the rig to it, the rig shut down from too high an SWR! On the other hand, when I tuned up the Isoloop to an SWR of 1.7:1 on 10 meters, 20 meters, and an SWR of 1:1 on 17 meters using the analyzer, when I hooked up the rig, the SWR matched and I was able to work some stations.

The rig is a Kenwood TS-140S, I have a Daiwa SWR meter, an MFJ low pass filter and antenna switch. When I connect the analyzer, I connect it to the SWR meter, the same way I connect the rig so it sees what the rig sees. I don't have problems with inaccurate readings on the Isoloop, just the 1621.

Anyone know what is causing this?

For me, even the 5 wpm was anguish. Was a Tech from 1958 to 1968. Then wanted the General. I worked evry night listening to the records, more on Sat and Sunday. Was going nowhere. My wife asked if anything was worth what I was going through. And the answer was YES! Anything was worth it to become an Amateur Radio Operator. Finally I wqent to San Francisco and passed the 13. It was worth it and more. Then got the Advanced. Then in 1976 the FCC said that if uou got an extra you could have the call of your choice. Plus I thought I should have the highest grade license. Back to the records and on the air. I got WAC
CW. Flunked Extra CW test twice. First time my heart was beating so loud that I couldn't hear the code. When I passed (at FCC office) it was a proud moment. I put the anti-CW attitude right in with the anti-learning in school group. We now have baseball games where nobody strikes out and score is not kept. That is not teaching children how to cope. Give people and obstacle to climb over. It's better that way.

Why does this continue to be suggested? The long-term trend has
been to weaken the theory exams. Is there reason to think the
F.C.C. would be interested in reversing this?

judge has denied a motion to dismiss and set trial for June 4th...
> ARRL policy is not to provide direct legal assistance EXCEPT in precedent setting cases.

I'm not too sure you guys have the facts straight yet. How would this
challange the law if the radio does NOT receive police frequncies?
If this IS true, how could the judge NOT dismiss the case? Sounds like
their is NO evidence to indicate Godsey WOULD have been in violation of
the statute, even IF their wasn't an exception for hams.
IF this is correct, please post the names and mailing addresses of the
judge and the Chief of Police. An arrest for an act which is so clearly
NOT illegal would be a criminal violation of federal civil rights laws
on the part of all of the people acting under color of law.

No, we don't want facts. This is a first-amendment issue where anyone has the right to post his half-baked and badly spelled ramblings on r.r.a.m and be in the company of all the other similar postings. Facts just restrict one's scope for pompous hysterics.

But two inconveniences: 1) in the case mentioned, it is my understanding that the arresting officer reported that when he transmitted on his radio that he had observed that this action opened the squelch of the defendant's radio. And 2) it is not the duty of the judge to make the motions and legal arguments to dismiss this matter.

Let's all quickly rush to judgment and hang both the cop and the judge before any facts appear which might spoil a really good yarn.

THE SEX LIFE OF THE ELECTRON

by D.C. Current

One night when his charge was pretty high, Micro-Farad decided to seek a cute little coil to let him discharge.

He picked up Millie-Amp and took her for a ride on his Megacycle. They rode across the Wheatstone Bridge, around the sine waves and stopped in the magnetic field by a flowing current.

Micro-Farad, attracted by Millie-Amps characteristic curves, soon had her fully charged and excited her resistance to a minimum. He laid her on the ground potential, raised her frequency and lowered her reluctance.

He pulled out his high voltage probe and inserted it in her socket connecting them in parallel, and began short circuiting her resistance shunt. Fully excited, Millie-Amp mumbled, "OHM - OHM - OHM - OHM".

With his tube operating at a maximum and her field vibrating with his current flow, caused her shunt to overheat and Micro-Farad was rapidly discharged and drained of every electron.

They fluxed all night, trying various connections and sockets, until his magnet had a soft core and lost all of it's field strength.

Afterwards, Millie-Amp tried self induction and damaged her selenoids. With his battery fully discharged, Micro-Farad was unable to excite his field, so they spent the rest of the night reversing polarity and blowing each other's fuses.

[980]
Newsline report number 980 with a release date of Friday May 24 1996 to follow.

The following is a QST

From the Hara Arena in Dayton, Ohio, site of Hamvention '96 this is Newsline.

Under bright and sunny skies, the 1996 Dayton Hamvention opened at noon on Friday May the 17th. Almost in the wink of an eye, the many exhibit venues inside this giant complex were transformed into one of the largest private radio exhibitions in the world. It is estimated that well over 30,000 radio amateur from across the nation and around the world made there way to Dayton for this years outing. People like these:

"It has been a wonderful Hamvention!"

"Hopefully a lot of bargains."

"It's been wonderful. Whoever's in charge of the weather deserves a lot of credit this year."

"The flea market was really good this year. A lot of bargains on the last day. A lot of people went down to 50% price to clear their items. But there was a good selection at the flea market and I didn't get to see it all."

"We come every year, all three days."

"I thought it was warm and beautiful, it was a great show."

"I've enjoyed it. My feet are hurting. I'm ready to go home."

What does the Hamvention look like to those who are in charge? That's the question we put to its General Chairman Ken Allen, KB8KE:

"This is the first year with the new date. Kind of an experiment. I think it worked out ok. It remains to be seen yet. I don't have the final attendance count, but all in all I think it was pretty good. Asked the question last night at the banquet who was in favor, who favored the change in dates. It was overwhelming in favor of it, so. It has gone real well. Warm weather, dry. We were scared to death. It was wet as all get out for most of the week before.
This years Hamvention has gone real smoothly, I think." KB8KE

As is usually the case, there is lots of new equipment on display. Some exhibit areas are so crowded that it takes close to a half hour just to get close enough to see and touch some of the gear. Even this cannot dampen the enthusiasm of those who had traveled from the farthest corners of the globe just to be a part of Hamvention '96.

"We judge it by the number of hats we go through. Last year 22,000 hats and we carried some home. This year 22,000 hats, they were gone by 9:30 this morning."

Forums and technical sessions are an important part of any Dayton Hamvention and in 1996 there is an over abundance of them. In fact, there are so many sessions that a fair number of them are being held off campus -- away from the Hara Arena over at Meadowdale High School some two miles away. The Hamvention planners are providing bus transportation for those wanting to attend an off site session.

"As you can see, we were over at the MARS folks. We have had a good crowd coming here. We've given a lot of information. Got a lot of people signing up. It's been a great Hamvention."

Also in the public spotlight was the American Radio Relay League. While Dayton is not an ARRL sanctioned event, its size make it a must attend for the League as well as national societies representing other nations as well.

(*****
STAFFORD ON NEW ORLEANS

The ARRL -- or at least one of its leaders is making news here at Hamvention '96. ARRL President Rod Stafford, KB6ZV took the opportunity of the Hamventions' ARRL forum to congratulate the FCC on its action in a New Orleans rules violation case. At the same time President Stafford told the FCC that hams expect the government to do a lot more in dealing with the most egregious offenders:

"The Foret case down in New Orleans was very encouraging. Encouraging in a number of, for a number reasons. First of all it was encouraging because it has been an ongoing case for several years. And it was nice to see the FCC finally do something about it. It was also encouraging that Mr. Foret has given up his amateur license. He can never apply for an amateur license, CB license. He will never talk on any transmitter was the

terms of the settlement agreement. And also what I think was kind of interesting, was the fact the he would give testimony that helped the FCC in getting some of the other people involved in the jamming down. So we were very happy to see the move on Mr. Foret's case.
I was in Washington, D.C. about a week and a half ago, two weeks ago, and the FCC people that I talked to were very pleased with the action that had been taken. I quickly reminded them that was nice, but you got to remember that their are other people involved in the same sort of activity. We need to have more of that same enforcement activity take place." KB6ZV

A lot of people in Washington and in the ham radio community appear to agree strongly with President Stafford. In fact, most FCC watchers believe that several new attorneys working for the enforcement branch of the FCC are already at work preparing the case work to get other alleged rules violators off the air. More on this story in future Newsline reports.

(*****
George Wilson, W4OYI

Speaking about the ARRL, the 1996 Hamvention marks the first public appearance of former League President George S. Wilson, W4OYI. As regular listeners know, about a year and a half ago, President Wilson suffered a massive stroke while in Washington, D.C. on League business. Last summer George tendered his resignation so that he could devote all of his time and energy to his rehabilitation. One of the goals that he had set for himself was to attend Hamvention '96. Needless to say, George Wilson, W4OYI made it.

And at the Saturday night awards banquet three well known hams were honored for their contributions to the Amateur Radio service. Radio Amateur of the year is Bill Tynan, W3XO. Bill is the current President of AMSAT North America and his acceptance speech was well received.

"Satellites, of course will be in the forefront of developing various types of new technology, including spread-spectrum. And they will also be in the forefront of building activity on our microwave bands. Again, as activity, we must have if we are to maintain these bands. You have heard, Use it or lose it. It is very true today. So I challenge everyone to do as much as they can to protecting our future." W3XO Tynan Here

This years Special Achievement Award winner was John Kraus, W8JK. Professor Kraus is best known in the Amateur Radio Fraternity as the inventor of the W8JK beam and the big ear antenna.
By now, may of you are probably saying that this was a year to honor the scientists and engineers whose' contributions have helped to bring the state of the art of ham radio technology to where it is today. The recipient of the 1996 Technical Achievement Award kept that trend alive, even though he was not able to be there in person. Bill Orr, W6SAI, designer, engineer and author could not make it to Hamvention '96. His close friend Joe Schroeder, W9JUV, accepted the award for him:

"After the war, Bill took up serious DXing and as Dick mentioned earlier earned DXCC number 17 and WAZ number 4. That was a very, very competitive time. Everybody wanted to be the first to get those two awards, post war. After a short period with Huges Aircraft, Bill moved to San Francisco were he worked for about 28 years on power tube and transmitter design. The first amateur radio technical article appeared in QST in 1946. Since then he has written over 100 if not several hundred more along with his technical column on CQ and he has authored many books including the Radio Handbook, Beam Antenna Handbook and All About Cubical Quads.
Bill is still active on the air on 18 and 24 megs plus a bit of 1296 FM. Truly a major contributor to amateur radio, Bill Orr well deserves to be honored for his technical excellence. It gives me very, very great pleasure to accept this honor on his behalf. Thank You." W9JUV

(*****
ATV AND FM SETTLE ON 450 MHZ

Word from Hamvention '96 that the feud between the giant Mid-America Coordination Council and the users of amateur fast can television may be over. This, with the announcement that MACC is modifying its position on 450 MHz in band ATV repeaters. Dick Eisley, WD9GIG is the president of MACC:

"The Mid-America Coordination Council, at its annual board meeting Friday night, in conjunction with the Dayton Hamvention, voted to rewrite its in house resolution recommending dealing with in band 70 cm ATV repeaters. And the motion, not exactly word for word, as I am doing this from memory, but in effect MACC has striped the sunset clause, if you will. The deadline for non- recognition of 70 cm in band ATV repeaters from its original recommendation. And also passed an addition recommendation strongly encouraging use of digital video compression technology. And also at the same token strongly urges actively the active discouragement of further in band 70 cm ATV.
Now this is not to be confused with cross band ATV operations. MACC has nothing to say about cross band ATV operations, particularly those systems that are multiple ported inputs on 1200 and 900 MHz with an output on 440." WD9GIG

Hopefully. this ends the problems between FM and ATV.

(*****

Its Sunday morning, May 19th as we record this newscast. Only a couple of hundred feet from here Hamvention goers are still mobbing the display area and the outdoor flea market. Another few hours and the rest of the prizes will be drawn. Minutes later, the roads out of town will be jammed with those who attended Hamvention '96. Most of them will be quick to tell you that they will be back a year from now to do it again.

(*****
CHAMPIONSHIP FOXHUNTS IN AUSTRALIA

The IARU Region 3 Amateur Radio Direction Finding championships will be held in Townsville, Australia from the 15th to the 20th of July. Separate

contests on separate days will be staged on two metres and ten metres. Each will be an all- on-foot event with five foxes on a multi-kilometer course under IARU rules. Hunters from Australia, Japan, China, Korea, New Zealand and Bulgaria will be competing.

(*****
NEWSLINE TERMINATING HOLLYWOOD LINE

Effective May 30th, Newsline will be terminating its outgoing service on the Hollywood, (213) 462-0008 telephone line. Last month we announced that we would be discontinuing service on one of our two California lines as a cost saving measure. We were in the process of evaluating which line when the decision was made for us. The company that has provided office space for our equipment is moving and we must be out of their premises by the end of May. After May 30th, the only number serving all of Southern California will be area code (805) 296-2407 located in the Santa Clarita area.

(*****
FUND REPORT

All of this brings us to the latest report on the funds available to keep Newsline on the air.

This month we heard from the Great South Bay Amateur Radio Club of West Babylon, NY, the Michigan City Amateur Radio Club, and the WA9INM Repeater in Plymouth, IN. We heard for Sterling Guidry, WB5WPG of Mararo, LA, the Tulsa Repeater Assn, the Canadian Valley of Washington, OK, and the Joplin, MO Amateur Radio Club.
Moving farther west, we heard from the Ski Country Amateur Radio Club of Carbondale, CO, Ken McLaughlin, KC7IFD of Kingman, AZ, and the Utah Amateur Radio Club of Salt Lake City. Also from Salt Lake we heard from regular contributor Linda Reeder, N7HVF. Thanks Linda.
Moving to the left coast, we heard from the Northwest Amateur Radio Repeater Group in Everett Washington, Rodney Swanson of Glendale, OR, by way of Newsline founder, Jim Hendershot.
From California we heard from the Sonoma County Radio Amateurs in Santa Rosa, Pete Cammarata, KF6BVK of Pinon Hills, the Valley Good Guys Amateur Radio Club of North Hollywood, Sam Panossian, KO6HE of San Morino, Anne Wright, N6BOP of Pomona, the Big Bear Lake Chapter of the Quarter Century Wireless Assn. and the Downy Amateur Radio Club.
Remember the clubs that support us with the club name, repeater call and service area get a mention during the newscast id break.

Listen for Andy again in about four weeks.

(*****
80 METER GATEWAY

WB6AAM says that he is testing an 80 meter packet gateway. The 80 meter frequency is approximately 3646 kHz on Lower Sideband. The Ka-Node callsign is WB6AAM-7 and will cross- connect to 144.91 MHZ in southern California. The mailbox callsign is WB6AAM-10.

(*****
SOUTH PACIFIC SATELLITE DX

For those who haven't been listening lately, the South Pacific has been active on AO-13 and AO-10. K6CBI reports that C21/JA1WPX is QRV on Nauru and TE9RLI, is on Cocos. Both have had fairly good signals.

(*****
NOTICE OF DX CANCELLATION

And AE4EZ, reports his DXpedition to Cocos Keeling and Christmas Islands has been canceled because he had to attend an emergency meeting at Tokyo. Ken plans to make another schedule in the future from these islands.

(*****
CROASIA QSL

A ray of hope for all those who need a card from HH2PK. Patricks' new QSL-manager is Tom, 9A2AJ. Tom will soon get copies of all of Pats' logs. Send your card with S.A.S.E. plus ample postage to Tomislav Domany 6/X1X HR-41000 Zagreb, Croasia.

(*****
YHOTY '96 NOMINATIONS SOUGHT

A reminder that the nominating period for 1996 "Young Ham of the Year Award" closes on June 30th. That means you have only a month and a half to compile a nominating package for the youngster you think should be named 1996 Newsline Young Ham of the Year.
For those not aware, Newslines Young Ham of the Year Award is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby service.
This years winner will receive an expense paid trip to the Huntsville Hamfest the weekend of August 17 and 18 courtesy of Yaesu USA Corporation. The winner will also get to spend a week in Spacecamp Huntsville as a guest of CQ Magazine.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

1996 Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus
California 91350.

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online.

(*****
And for this week, that's all from the Amateur Radio Newsline. You can

Eric,

If this is medically diagnosed you are entitled to a waiver. The waver system was put in place to comply with the Americans with Disabilities Act. The fact that this tortures the folks I affectionatly refer to as "Code Nazis" is just a pleasant coincidence, not part of an evil plot. Any MD or DO can sign off on the back of the 610 and then you have a year to pass the written tests for as high as you care to go. This assumes you have passed the 5 WPM required by international agreement.

There are a number of jerks who will take issue with the system but since it is based in law they can suck eggs. I imagine that they are the same people who park in handicaped parking places and made fun of the kid with the lisp in school. pay no more attention to them than you would to pond scum.

Walt:
Although you and your "GOOD BUDDIES" may have found HUMOR in your
response, I suggest that you UNDERSTAND what you READ before you
demonstrate to all..... (to hell with it you ain't worth the flame)

First, the CALL and the extension of his name should have given you
the CLUE that not being from the U.S. , your durogetory(sp)
references to Citizens Band may not have the implications (to him)
you intended ; unless it was to show how very stupid U.S. amateurs are
in general... and in their knowledge of the world radio community.

Secondly, perhaps he was needing to trigger some remote device
actuated by the tone - perhaps an unattended TX/RX switching facility?
maybe he just wanted to "ID" and start his coffee maker while he
was still driving home....More information from him WOULD have been
helpful; However, Your response only goes to prove there are more
DREWS and BURT FISHERS every day... More ready to
castigate and FLAME than to actually offer assistance and
understanding of different individuals or cultures.... or the needs of
someone other than themselves.
(what a sickening thought)

I am in total agreement. The FT-50R has got to be the best HT I have owned. For the price they are selling
for you can not beat it! To the whiners: If you wanted to listen to FM radio you could buy a old Radio Shack
flavor radio for that, not a HT! Just my 2 cents. 73, N2SJH

I've got news for you -- the FCC doesn't write the tests any more. The VEs (usually the VECs) do it, subject to FCC regulations. If they want to make the tests tougher, they can.

I agree, Nasa was the originator of the over Beep, Not our favorite
Good buddys on 11m. It can be a helpfull end of transmission indicator,
too bad its gotten such a bad wrap from the association with CBers.

I think that you can safely allow your ducks wander around out of order
for several more months.

Gate 1, which hasn't yet opened, was given a full month of prior notice.
And after the dust has settled from that one, Gate 1A must be announced
and dealt with before your Gate 2 is due. No one has any information,
because until the first valid Gate 1 applications arrive in a couple of
days the work to process them will be quite unknown. My tummy-rub guess
is fourth quarter at the very soonest for Gate 2.

MIKE:

I don't know if this will work in your situation but - - for what it
is worth - - here is my xx Cents...

Jerk down the headliner, and build your GROUND PLANE (out of wire) on
the INSIDE of the ROOF of the VEHICLE, then select a GOOD QUALITY
antenna (not the CRAP from Radio Shack) and mount it dead center of
the roof... or as close as you can get to center.
I realize it is "not the same", but I have installed many a CB/HAM
antenna on the fiberglass celing of "pop-up" tent trailers using this
technique, with very good results, and if you use a bit of care, the
headliner will never show it was removed, or the secret it conceals.

Hi Derek,

Well part of the IARU/ITC thinking is to lower the
40 band below 7.0 mHz. I have no idea how low they have in
mind. But we in Hawaii already have SSB 7075 to 7100; I rarely
tune above 7.1 as the international commercial stuff is too
powerful out here in nearly mid-Pacific! Also, seems Australia
and others have much more SSB spectrum below 14150 mHz. So the
operating segments are different around the world on the various
bands, I'm not even aware of the entire picture. I have a difficult
time monitoring the 14100 beacons because of digital mode QRM on
frequency; and SSB and digital stuff above that freq. Need, I think
some sort of agreed upon international band plans.

My whole thought was to consider the entire FASC discussion parper,
which includes points about international travel about the globe by
amateurs, poorer nations inability to offer all the licensing bells
and whistles, etc. My thought was to get all signing nations to the
ITU treaty to agree on one plan -- maybe even including the right to
allow visiting Expert level license holders to offer "VE" type endorsement
tests in a country where the nation itself is not in a position to do
the actual skill certification. The nations licensing officials would
be obliged by the treaty to recognize any other nations operating license
endorsements, and the endorsements earned by their own citizens when
certified by internation VE qualified examiners. How all this gets
set up -- will take awhile, and I have no idea about how!

2049. 21st Century Ham Licenses

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-27 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <31AA0599.7040@aloha.net>
Source record: 224542

Aloha to All,

After reading nearly everything on the reflectors and newsgroups
these past days about the FASC, I sent the following to both
Dave Sumner, Exc. VP of ARRL and a member of the FASC committee,
and directly to the IARU FASC committee, as Dave had suggested:

Please, let amateurs about the world give these issues about the
future of the amateur radio service/hobby in the 21st century
some serious thought, and then, add your ideas and comments
to what others are saying. Out of all of it, these committees,
the IARU and the ITU will eventuall act, and things will be a
changing!

My first, but probably not final submission:

To the IARU FASC

I would suggest the following to be considered as the world-wide
licensing structure for Amateur Radio in the 21st Century. These
ideas are based upon many ideas I have read on various internet
forums/reflectors in the immediate past days. Little of it
is my own thinking!

Whatever the future Amateur operating spectrum bands are determined
to be made available by the ITU between 1.8 and 30 mHz, each band
should be divided, in some manner (proportions to be determined)
among three types of Amateur operating activiy: CW, digital mode,
and analog mode. All countries will issue only three classes
of Amateur Operating/Station licesnes. The two higher grade
licenses, General and Expert, will be endorsable with one, two or
three operating privilege certifications: CW band access; digital
mode band access; analog mode band access. The licensee may hold any
or all of the endorsements as his interests in learning the material
and passing the tests to earn the endorsements is demonstrated by
appropriate examination.

This idea compilation would result in something similar to the
following set of license classes:

Novice---- 28mhz and up...no code (stimulates HF interest); basic
electronics and radio theory, rules and basic
phone modulation theory (SSB and FM) and
operating procedures tests.

General----- 18mhz and up ...Hold/pass Novice elements as above,
plus HF propogation theory test and

HF band rules as applicable, 18 to 30mHz.,
plus (6-10?)* WPM code for access endorsment
for CW subbands; or, plus digital mode theory
for access endorsment to digital
mode subbands; or, plus analog mode (SSB,
SSTV) theory for access endorsement
to the phone subbands; or any two or all
three privilege endorsements.

Expert---- All Amateur Bands...Hold/pass Novice and General elements
as above, plus advanced radio and lower
band propogation theory; plus (13-18?)* WPM for
access endorsment for CW subbands;
or, plus advanced digital mode theory
for access endorsement to digital mode
subbands; or, plus advanced analog mode
theory for access endorsement to the
phone subbands; or, any two or all
three privilege endorsements.

The phone guys get no CW privileges. The CW guys get no Phone priviliges
until passing the corresponding test in that class to earn the privilege
certification endorsement

All nation's amateurs use the present European amateur band frequency
operating plans. An amateur licensed by any nation signatory to the
ITU treaty, may operate, with his certified operating endorsements,
in any other treaty nation with notification to that nation's proper
authorities.

Such a licensing structure would remove the need for those amateurs
to learn CW code and skills to gain access to any of the world-wide
Amateur Radio Operating HF operating bands, and the frequency
segments available to each type of operating mode would be recognized
by all nations in all bands 1.8 to 30 mHz.

Should a nation choose not to license amateurs for CW operating,
they would have no need to spend money, or otherwise be
troubled by the need to give and certify CW code operation
or skills. They might, for example, choose only to offer
that nation's radio amateurs the analog phone test and operating
license certification privilege: the least costly to them of any of
the three types of license for amateur radio operation.

Just some thoughts for consideration, and to, I hope also defuse
the debate about CW Morse code and the "world-wide reaching"
amateur radio HF spectrum operating service/hobby.

*Note: I added the bracketed code speeds AFTER sending to the IARU and
ARRL; originally sent 8 and 13 wpm. But now am having second thoughts on
the speeds to earn CW band privileges. What do you think about the speeds?

>operating rights or would my license be grandfathered?

Aloha Doug,

I would anticipate that no one looses anything they
already have, and many will gain. Even we Extra ticket holders
will probably gain added spectrum space, all classes get exclusive digital
mode spectrum, and CW beacons not being QRM'd by digital stuff,
al la, 14100 mHz today! Probably the spectrum allocations among
CW, digital and analog will become closer to equal, unlike the situation
today, and, I hope uniform about the globe of the world!

> The term "DX", apparently derived from the word distance, can be traced
> to the earliest days of amateur radio experimentation.

AAMOF, the term "DX" originally meant "Weak Signal" and not "Long Distance" or even "Foreign Country". The present-day meaning of the term is apparently derived from the fact that originally, the weak signals all came from distant countries.

>>> "CW ... has kept all the young blood out of the hobby."

Let's see, I got my Advanced when I was 14. My 10-year old is a General with a 20 wpm CSCE inspiring him to take two more written exams this summer. And extensive research shows that learning skills such as Morse code is radically easier below age 10 than above it.

If anything is keeping young blood out of the hobby, it's lack of willing adult operators who will spend the time to show them that this is fun and to teach them how to do it. Dropping requirements is not an appropriate solution to this problem.

"CK's Ode to Dah Code"
(by Gary Spence -VA2CK- Aylmer,Qc cspence@synapse.net)

We' ve all heard the cry "abandon the code!,
it's useless outdated, NOT a mod-er-n mode!"
So I said to myself,"could codes' day really be over?
Best left for SKs' fer-til-iz-n' the clover?"

So off went my paddle 'n keyer to a museum,
so those curious of our "past" could drop in an' see um.
I then bought a computer and a box I was told...
would update my station,using all hi-tech modes.☐

It then was set up,all by my own hand...
the screen it lit up et voil Heard Is-land!
I switched to transmit to" talk with this gent"
but my screen read "sorry, can't copy 100%!"

"There's static,interference if you could hear it you'd agree...
if it ain't armchair copy we machines cry c'est la vie!"
It then said "there is as YOU know a way to get through,
it's called the code,and what luck for you!"

"You've learned this art,you "stuck it out"
'tis a valuable tool,there isn't a doubt."
"You' ve invested your time,and besides the code you did learn,
possession of valuable skills must be... EARNED!"

So I say to you now don't get fooled when some say...
"Codes an' old dinosaur fadin' away!"
It's part of our past,present and future existence...
anti-coders prepare for "beaucoup de resistence"

2056. Re: Anyone heard of or tried Ten-Tec kits?

Newsgroup: rec.radio.amateur.misc

From: dslosty@usa.pipeline.com
Message-ID: <4ob20k$eie@news1.t1.usa.pipeline.com>
Source record: 224597

Hi,
I haven't tried any of their kits, but in terms of their complete transceivers, I've found them to be the most reliable/helpful company in ham radio today.

I have a 1977 vintage Ten-Tec Triton IV, 100 watt 10-80 meter hf transceiver. It has a better receiver than my Yaesu FT747GX and works great at high speed QSK.

I recently needed parts, called Ten-Tec. They sold me some parts on a billing basis (kind of if you like them, pay for them). Several parts they considered obsolete inventory and sent them for free. I hear that on their new HF rigs, they ship spare boards out under warranty, no questions asked.

I'll contrast that with the Japanese companies: Icom and Yaesu. I recently called ICOM about my IC-202S 2mtr transceiver. They have no parts for it because "it was over ten years old". I had purchased it from a dealer as new 8 years ago, but it apparently had been discontinued before that. I had a problem with my Yaesu FT747GX - Yaesu refused to ship any parts under warranty. The only way I could use the warranty was to ship the rig to them prepaid and wait 6 to 8 weeks for their repair. I ended up paying for parts on a new rig because I didn't want it to be out of service that long.

Did anyone in CM88II notice that the responses from the
'coded hams' are to show their distain for the barefoot
boy from Kenturky who wrote the orginal nasty response ?

Sure doesn't look like it, huh ?

From the nature of your remark, I assume you are an
uncoded ham Steve. Thanks for doing your best to
break us up into small groups. And please remeber,
you used the term 'low-life no-coders', I didn't.

73, Jim KH2D

P.S. How do you telling from reading email who is a
'coded ham' and who is a 'low-life no-coder' ? I don't
seem to be able to find the option to figure that out
with my newsreader software.

I am looking for DOS or Windows software that will convert degrees,
minutes and seconds to decimal degrees of latitude and longitude.
Also to convert from decimal degrees of latitude and longitude back to
degrees minutes and seconds.
I sure would appreciate it if someone could point me to a good
program. I know how to do it on a calculator but it is just a little
bit cumbersome to do it that way if you have a lot of conversions to
do. Thanks for listning.

Yo Jeff and Gus, a different perspective

Although my Funk and Wagnalls defines DX as "Distance", Hugh Cassidy
WA6AUD in his West Coast DX Bulletins proclaimed:

DX IS!
For True Blue Believers
Among the enigmas of the ages

From a poll of DX Club Members:
To some its having the Best Big Gun Station
To the Hunter, its the stalk
To the amiable, it is world wide QSOs
To others it is working Mozambique QRP
To the underdogs, it cracking a pileup with an R5 vertical
To most it is working Conway Reef
To the global, its DXCC and WAZ
To the contester, its winning
To all, it is in the ear of the beholder
To me it is:
Hark! For I Have Hurled My Words To The Far Reaches Of The Earth!

Problem with 6 meters is it requires a lot of patience, at least out
here it does. A good friend of mine who just left Guam after being
here 20 years was an avid 6 meter operator. He had a baby monitor
sitting next to the rig (in the scan mode) and carried the remote
around the house so he could go racing for the shack when the band
opened. I think the new guys may get bored with it quickly because
you can't always switch the rig on and hear something 'rite now'.

>And once CW is abolished from HF testing, it will be something else that

As much as old folks like to think the world will fall apart without
them, youngsters today are in better health, better educated than your
generation. If you are 70 (my guess) the average height a kid today

is 1-2 inches more than in your day. All levels of education have
risen in the last few years, due to fact kids know they can't go without it.

>Your guess at the average age of HF hams is based on conjecture
>(bullshit to you...as a "techie" expression) rather than fact. I am,
>however open minded to any facts you can provide to corroborate your
>(apparently) wild guess.

Your out in the weeds.

>"no-code" communication then it'll be back to hill top beacon fires and
>Aldis Lamps...the second coming of Samuel Morse's code plus the return of
>Semaphore.

That died out with the cold war. There may be a nuclear war someday, but not
a global nuclear war. The chances CW will ever be of use again are
slim to none.

>: >If you don't like it then "get out of the kitchen!"
>
>: Don't like what? I paid my dues. I earned the right to complain about CW.

>distasteful?

Thats exactly what is happening now. The CW coders are rapidly
falling into a minority, then CW won't be a requirement anymore.
Will you whine when you are a minority?

>: And I don't take kindly to old farts who get thrills by needling no-code
>: techs. If you don't like my opinions ... deal with it.
>: I'm on HF to stay whether you like it or not.
>
>If I need thrills, I'd hardly be looking to the Internet or ham radio as a
>source.....not unless I was content to set really low expectations.

Well you have made two references to "techies" in this post alone,
obviously a swipe at no-coders.

>As to your opinions, well all I hear an resentful young anarchist,
>wet behind the ears, with the ink on his licence hardly dry, trying to
>bulldoze his immature beliefs on others without constructive debate. I know
>cos I did it myself in the dim and distant past. That doesn't justify it
>as a principle however.

The debate will be how to replace CW with learning material that
is more useful and up to date. Thats my belief and something
CW coders really don't want to talk about/debate.

>Thus your opinions are not worth dealing with in terms of their comparative
>importance to other day by day situations which attract my undivided
>attention and if that needles you....well, tough, that's life, it can be a
>bitch!

You can't needle me now, I got my liscense.
I just hope that the no-coders out there who read the extremely
negative drivel the CW coders post here don't drive them from the hobby.

Source record: 224409

I just finished building the Ten-Tec 2m FM transceiver kit. I had a lot of fun (reminded me of the old days building Heath, Knight, and Eico kits). The manual was clearly written and *informative*. Ten-Tec honestly seems to want to make sure you understand what you are doing and how your gear works. Bravo for them! The assembly is accomplished in sections and testing takes place after each phase - you get a working control panel first, VCO second, rcvr next, and then xmtr.

The completed transceiver works well, is good value for money, and taught me something about modern equipment design. Oh yeah, I had fun building it and (obviously) feel good about having built something that works well.

I also have a Ten-Tec OMNI VI (top of the line HF xcvr)
and have been extremely pleased with it
and with Ten-tec's attitude toward customer satisfaction - they are really great people with whom to do business .

I've got no connection to Ten-Tec other than being a happy customer. There aren't any more Heathkits, but Ten-Tec is a very worth modern equivalent.

Replace the electrolytic capacitors. These are the big metal cylinders
sticking up out of the chassis. They are not socketed like tubes.
The boric acid in them dries out after many years. New ones are much
smaller but its hard to find high voltage capacitors these days.
You are hearing the 120 Hertz ripple noise of un-filtered DC (direct current)
from a full wave rectifier. You mentioned replacing the speaker. Many of
these old radios had the high voltage DC passed through the electromagnet on
the back of the speaker. Be sure to replace the magnet coil with a choke or
high power resistor if you substitute a permanent magnet speaker.
You now have an 'OM' machine. I once heard about a fellow that was into
some Eastern religeon. He had an old radio like yours that hummed and he
would turn it on and hum with it. "OMMMM!". Some kinda Mantra thing.

I've had several old Sparton radios. A couple were big suckers, 18 tubes,
three speakers, two 6" and a 15", separate amplifiers for midrange (6V6)
and bass (6L6 class AB2) which required two chassis. 150Khz to 60Mhz.
Nice cabinet. But the only Sparton I have left is a very small one with
big old 5 and 6 pin tubes absolutely crammed into an ornate little box.
Gotta be one of the first All American 5 type of radios.

Gotta miss that 350 volts!

Have been asked the question now many times. Hope the following is
a good answer based upon my intention that all US General and up
license holder would be "grandfathered" in as new Expert Class
license holders with full access to all privileges.

At 20:10 5/26/96 -0600, you wrote:
>I think the suggestions here are more than fair for the needs of Amatuer
>Radio in the future. My question is what would happen to existing
>licenses? As an Extra would I have to retest in any special area to obtain
>operating rights or would my license be grandfathered?

Aloha Doug,

I would anticipate that no one looses anything they
already have, and many will gain. Probably all ticket holders
will gain added spectrum space, all classes get exclusive digital
mode spectrum, and CW beacons not being QRM'd by digital stuff,
al la, 14100 mHz today! Probably the spectrum allocations among
CW, digital and analog will become closer to equal, unlike the situation
today, and, I hope uniform about the globe of the world!

US General and up license holders would have access to everything
as new Expert license holders.

Have I said anything to imply certainty? Do phrases like "as nearly as I can tell" and "subject to further info" and "it seems to me" suggest certainty?

I'm certain of very few things. I have thoughts and concerns about many more. At this point I'm waiting to see the RFD.

2079. Re: SURVEY: How long did it take you to pass 13wpm code test?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-28 00:00:00 UTC
From: kferguson@aquilagroup.com
Message-ID: <4ofjru$6m9@blixen.aquilagroup.com>
Source record: 224418

>charles1@netcom.com (charles copeland) wrote:

>>This is a survey to determine the average time it takes one
>>to learn 13wpm CW. I've heard people claim 2 weeks to 2 years.

5 WPM:
One Afternnon (3-4 hours) of study, using W2NSD tape.

~8 months as Novice, speed got close to 10 WPM by on-air practice.

13 WPM:
About 12 hours of actual study, spread over 3 days , again using
W2NSD tape..

~6 Months as General, ~15 WPM acheived by on air practice.

20 WPM
About 20 Hours more study, over about 5 days..

But what possible use could such information be put to? It is like
asking "How long did you know your spouse before getting engaged?".
The numbers will vary so much from one to the next, that someone
thinking about getting married will find little meaning in the
avereage, deviation, or other statistics. The fact is, both things
depend far more on the person involved, than on the task at hand.

Looking at the average, a fast learner may be discouraged from even
starting out, and a slow learner quit too soon, just because they hit
the average time without "getting it". Either way, no good can come
of it.

That you ask the question suggests impatience, and desire for quick
gratification, so you are doomed to have a hard time. Asking the
question indicates you consider this hard work, so it will be.

Might also put this code argument a little more into focus, and shed some
daylight on the relative importance of amateur radio licensing in the grand
scheme of things.

Though in the scenario you describe, in which survivors would
be struggling to find food and shelter, I expect there would still be
a ham sitting at a radio somewhere, worrying about whether the other
fellow knows his code and has worked hard enough to share the airwaves
with him.

Ronald Bouthillier <ronald.bouthillier@chowda.com> wrote:

>What are the other repeaters then???

Jed Barton, N1JBC, was caught by KA1RCI jamming and/or hacking one of RCI's repeaters. N1JBC was also caught jamming a RACES drill by KA1JNP, although I do not know if this was on JNP's machine or not. KA1AIR has caught Barton "playing with tones" in an attempt to access remote control operator functions on his repeater, and I have caught Barton jamming/hacking both the 146.70 and my machine.

Those are the accounts that I have "first-hand" knowledge of (directly told to me by the abovelisted parties.) I have also heard numerous other "second-hand" stories, but I have never referred to them as I consider them rumors and not facts.

It is true that Barton is blamed for a large portion of the jamming/hacking that goes on in the state, and perhaps he is wrongly accused on many occasions. That's too bad. As someone else put it: he made his bed, so now he has to lay in it.

2082. Slow Code

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-28 00:00:00 UTC
From: griffin@jgfl1.allcon.com
Message-ID: <Ds4nvy.102@jgfl1.allcon.com>
Source record: 224421

One other problem: I can't read code unless it's between 16 and
24 wpm. Anything slower than about 14 gets translated to
"T T T long-T" or even "long-T long-T long-T tuning". Where
can I get training tapes that sweep from 16-24 (and back)
using larger gaps between letters? It really frustrates me
when I get a slow tape full of "T"s or a fast tape with too
short pauses.

Any help appreciated,
Jens, DB9LL

My wife (KB0PWD) and I will be traveling to PA in 4 weeks. The repeater guide tell us about all the repeaters along our route but what we really need to know is which ones are the most popular and/or have the best range? We will be on 2 meters.

To all those out there near these routes:

I-70 from Kansas City, MO to Columbus, OH and on to Youngtown, OH.
Youngstown, OH on I-80 into central PA.

Please e-mail me any relevant repeater info you may have. I seem to remember a nice multi band linked system in the St. Louis area on 147.21 and a wide area linked system in Ohio on 145.19?

Hey, I'm not "anti-law-enforcement" by any stretch of the imagination. But this whole incident smacks of some wise-ass cop deciding he's gonna screw up some unsuspecting teenager's life. My reaction, write, email, or call the above listed police department, newspaper, judge, district attorney, etc., and ask for this bozo's badge! And for crissake, give the 16-year-old had back his equipment. He EARNED his right to own and use it. I do hope he has a slick attorney because the kid could sue for a lot of money because of this one dumb cop's attitude problem. No, don't start... I know that ALL cops are not like this guy (the woodshed is TOO GOOD for him) and they're not all Mark Furmans, either. But let's get this turkey off the streets before he does something even more inept, embarassing, and life threatening. He has a poor sense of judgement, and there is no room for that in today's policework. A police officer cannot enforce the laws if they don't know them. Dumb cops like this mental midget should be replaced with a police officer of integrity, who takes his job seriously and recognizes the responsibility he has to his community. Busting teenage hams does not fall under this category.

'Nuff said....!

Hi, I'm trying to find a way to contact K9AY, Gary A. Breed, who is (or was in 1994) the Editor and Associate Publisher of the journal "RF Design", the address for which is 6300 S Syracuse Way, Suite 650, Englewood, CO 80111.

I'm very interested in Gary's patent-pending design for closely-coupled-resonator antennas which was published in the Nov 1994 issue of the journal and would like to discuss several points with him; however so far I've been unable to find any email or packet radio addresses for him. Does anyone know how to get in touch with him (apart from snail-mail)?

By the by, has anyone else tried the c-c-r type of antenna? I would be interested in hearing from anyone who has.

I asked Jack Daniel, (now there's a unique name for ya) an RF
consultant to write such a program three years ago. It was uploaded
to the Simetl20 achive site. Simtel20 has changed. Point your web
browser to:

http://www.cdrom.com/simtel.net/msdos/mapping.html

and you will find the file. Here is the original announcement.

Delivery-Date: Sat, 29 May 93 14:26:27 -0700
Date: Sat, 29 May 93 16:25:24 EDT
From: lockhart@uci.edu (Jack C. Lockhart)
To: MSDOS-Ann@tacom-emh1.army.mil (MS-DOS upload announce)
Cc: jdaniel@earthlink.net (Jack K. Daniel),
lockhart@uci.edu (Jack C. Lockhart)
Subject: COORDCHG.ZIP - Convert map coordinates dd,mm,ss <=dd.####
Summary: Reposted by Keith Petersen

I have uploaded to WSMR-SIMTEL20.Army.Mil and OAK.Oakland.Edu:

pd1:<msdos.mapping>
COORDCHG.ZIP Convert map coordinates dd,mm,ss <=dd.####

COORDCHG.ZIP converts latitiude and longitude degrees, minutes,
seconds notation <==fractional notation.

For example: Latitude: 33.7878N is translated to 33,47,16N
Longitude: 117,53,17W is translated to 117.8880W

The author is jdaniel@earthlink.net (Jack K. Daniel) Mr.
Daniel has authorized me to upload this program to SIMTEL20 and
OAK.Oakland.edu and has placed this program in the public domain.

Initially, the Commission had planned to open gates in 90 day increments, but that was before they inserted Gate 1A. Gate 1 will only be open to previous holders of requested call signs and survivors of deceased call sign holders and I don't imagine that there will be that much of a crush put on FCC. I'd start looking for the public notice within 30-60 days of the opening of Gate 1.

73 es good luck in getting the one you want!

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated May 6, 1996 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic mail:
parnass@bell-labs.com. Thanks to Dennis Dale and ARRL |
for providing some of the information.

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau
County Fairgrounds. Admission $5, free parking. Info: Deb-
bie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-
1710, tel. 815-795-2201 Usually an excellent hamfest, with
sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Granite City, IL - Egyptianfest '96, Egyptian
Radio Club. Granite City campus of Belleville Area College,
1/2 mile south of I-270 on Ill Hy 203 at Maryville Road.
8:00am to 1:00pm CDT. Annual hamfest, computer fair and
fleamarket. VE session, food and drink, indoor dealer /
exhibitor area. Talk-in 146.79 MHz. Info: Egyptian Radio
Club, P.O. box 562, Granite City, IL 62040, call Bill Dusen-
bery N9OQK at (618) 398-1456.

June 30 (Sun), Wheaton, IL - Six Meter Club of Chicago.
DuPage County Fairgrounds. Outdoor and indoor flea markets. |
Gates open 7 AM. Buildings open 8 AM. Admission $5 at
gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. No |
booze allowed. Tickets available from Mike Corbett, K9ENZ,
606 So. Fenton Ave, Romeoville IL 60446. 24 hour hotline |
for info (708) 442-4961. Good hamfest which moved from
Santa Fe Speedway to Wheaton this year.

Jun 30 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest.
American Legion Post 434, Shepard Ave. Admission $5.
Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League.
Waubonsee Community College, Rt. 47 at Harter Rd. VEC test-

ing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

When one is in the business of providing both information and a forum, one should strive instead of mediocricy and half truths, not to mention outright ill informed opinion to provide accurate and researched material that will gain respect, not off the wall unresearched comments that not only will gain disrespect but has the potential of causing real problems to law abiding hobbiests who, not only has the ability to be a lifeline in emergencies as proved time and again, but to people that like to enjoy themselfs by persuing both world-wide communications and technical knowledge. To often in the world of 100 channels of tv and all the eye and ear candy one can stand that the ones that are different is held up for ridicule and misunderstanding by thoes who should instead of giving inaccurite and Ill-informed opinions should be spending more time educating themselfs and less time ridiculing others. How many times have the oddballs and the ones that were "WIERD" provided substantial increases in the condition of human existance?

Oh Charles, you couldn't be more wrong. The freshman mathematics
we're teaching today at universities and colleges was high school
math decades ago. Today's freshmen know nothing of the classics,
have difficulty formulating their thoughts into written form, have
a very limited vocabulary, have little or no skill in arguing their
beliefs, are extremely weak in geography, are ignorant in world and
national history and in current events...
It's very depressing. I fear for our country's future.

Please be aware that group-advice is currently down to three people and we have a large backlog at the moment. I'm doing a run through news.groups, and then I'm off to work on reducing that backlog some more.

Delays are just delays; please *don't* interpret them as stonewalling of any sort. We're just all massively busy at the moment and trying desperately to catch up.

The Technician license offers all amateur frequencies above 50MHz and none
below. The Technician Plus license requires limited Morse proficiency and
offers limited CW and even more limited voice below 50MHz as well as the above.

And what use would that be? I was in Hong Kong a few years ago with a fella that was fairly fluent in one dialect or another (at this moment, I don't recall if it was Cantonese or Mandarin - but for the story, let's say he knew Madarin). Well, for all his years of study it didn't do him much good when looking for the famous floating restuarants in Hong Kong harbor. All the folks in that neck of the woods spoke Cantonese & didn't understand what the heck he was talking about. But, as far as HAM radio is concerned, I'm sure you'll find more people to chat with using CW then with Cantonese (or Madarin for that matter).

>
> What is a whinger? Not in my webster dictionary.
> I got my way, got my general in spite of distate for CW.

Are you being serious here? You mean that you couldn't figure out he meant whiner vice whinger? A simple typo, don't be so critical.

> Whose the minority group? No Code Techs are growing by leaps and bounds,
> while HF Hams are dropping like flies. My guess is the average age
> of hams on HF is 70, and rising yearly. No Code Techs will rule all
> the airways in a very few short years. CW will be dropped without a doubt.

That would be a great trick. With all the new, supposedly young, hams joining the ranks in "leaps and bounds" how could the average age rise yearly? I'm sure that if no new hams were to join the ranks for one full year, the average age of all the hams (US only?) COULD rise, but I'd be willing to counter guess and say that a good lot of old guys would go SK and a bunch more would simply have their tickets expire and thus quite possibly LOWER the average age. That's my uneducated guess if and only IF no new hams joined up. But, for each one of them leaping and bounding new hams that joins up (and for each one of those crusty old CW freaks that leaves the ham ranks) the average age will likely fall.

> Don't like what? I paid my dues. I earned the right to complain about CW.
> I was forced to learn CW if I wanted to get my HF voice priveledges.
^^^^^^

This is a comon complaint, being "forced" to learn CW. Since you're a fan of Webster's perhaps you could look up the definition of forced. When were you "compelled by force" to learn CW? I'm sure that you had to "force" yourself (done

or produced with effort, exertion...) to learn CW but NO ONE "forced" you to do so. Perhaps you meant required? Here again, you didn't earn the right to complain, you were born with that constitutional right to do so.

> I learned it, hate it, don't see a need for it, it shouldn't be a requirement.
> And I don't take kindly to old farts who get thrills by needling no-code techs.
> If you don't like my opinions ... deal with it.
> I'm on HF to stay whether you like it or not.

I don't know so much that its all "old farts" getting thrills as much as its people who took the time and made the effort to learn CW in order to recieve their HF privledges. I'm definately NOT an old fart being just 30 and I've always been an avid CW operator. Since I stay out of the phones bands (for the most part) I don't really care who uses them. I do recall how hectic the 10M band was back around 1990 (when the band was in much better condition), you could hardly find clear frequencies on slow days. If all the codeless folks could be on HF tomorrow & the bands were open for DX, you'd never find a clear frequency. Yuck.

> >Cheers....Mike
>
> 73 KB0WOB (just got general call letters/liscense in the mail yesterday)

Hey Wayne, don't sweat it. I have 2 mag mounts on my roof (Hustler 2 meter and Motorola 10 meter). They are mounted side by side right above the headrest areas for the driver/front passenger.

Once I re-calibrated the compass, it worked just fine. I do suggest that you put the antennas as far away from the compass as possible and use 2 if you can (magnets will cancel each other out near the compass area). I think the magic trick is to make a perfect triangle between all three points.

I think what we are going to see is a real high profile case that gets every ones attention. Or maybe they will bulldoze the ability to open up amateur transmitters all together. With the impending closing of FCC field offices and monitoring sites, it may be a logical move to tighten enforcement a bit. .

They may be after the " bootlegers " or marine operators using amateur gear. Many marine users use amateur gear as it is cheaper to purchase. The marine transceiver must be witn in 20 hertz. I receive lots of calls how to adjust the amateur transceiver to with in the specification as the operator got a slip from the FCC saying he was off frequency by 50 hz. I am sure there are few who are affectuing other operations.

A manufacturer only has to rite a bit of code in the cpu and it the clipping a diode is history.

We'll see in about 30 to 60 days or so what is up.

Gary

2111. Re: Ky Ham Bust Info From ARRL Letter

Newsgroup: rec.radio.amateur.misc

>Fritz
>N4JVP

Well Fritz, there is certainly no harm in signing /1 even if not
portable. It certainly identifies you as being in the first call area.
If there is no upgrade identifier of "NH" you might try call/NH to
signify you are in New Hampshire. Of course, if there is a DX country
with NH as the call group, you would be misleading. How about
call/gridsquare to identify where you are? That seems to solve the
problem, even if gridsquare is not in the regulations. or you could try
call in gridsquare which only adds 7 to 9 characters to the identifier.

Wonder what the other replies will be.

If I remember my history correctly, within days of when the USA declared war upon Japan for their action at Pearl Harbor, Germany declared war upon the USA. It was after Germany declared war upon us that we reciprocated. In essence, I guess you could say Japan forced our hand. Germany declared war on us because we declared war on one of Germany's allies. Ah, entangling alliances!

The cops radio (mobile rig) is probably putting out 100 watts.
In close proximity to the HT, there's certainly a liklihod
that the HT simply was overloaded in the HTs front end.

>And 2) it is not the duty of the judge to make the
>motions and legal arguments to dismiss this matter.

True, but a good judge, if he/she is aware of that will
let the prosecutor know and that should end it.

>Let's all quickly rush to judgment and hang both the cop and the judge
>before any facts appear which might spoil a really good yarn.

From the recent additional info posted,
they should hang the cop for sure (and his superiors) and
maybe the judge.

Cecil, I don't believe you. After all the flaming and name calling
that has been going on over the subject of CW or no CW, you choose to
single Sam out for not following the quidelines. Most of what I read
in Sam's article was positive and I don't think he ever said he was
for a "policy" to keep or drop cw. I think he said he enjoyed radio
and learning and to that end he hoped to learn the code.

Hang in there Sam. There is plenty to learn in the hobby and something
for everyone. I know some guys that love packet, Iam not among them,
but that fine . They enjoy it. Know some other guys that like
contesting, again not me. They have a good time, bloodshot eyes and
all. I am sure with your positive attitude will find "your thing".

Sounds like the cops radio may have overloaded the front-end of the
HTX-202 and caused it to break squelch. I noticed that the cop never
said anything about hearing the kid on police frequencies or hearing
his transmission on the HTX-202. IMHO, it sounds like purely
coincedental and circumstantial evidence. If the cop heard the kid on
his freq or heard his voice from his cop radio on the HTX-202, then he
would have a case. But as it is, I hope the kid sues the state and
gets enough money to go to college and then retire. :-)

The problem is more severe than CB misuse. In the worldwide boating community, users of HF MARINE (SSB) services often "clip diodes" on ham rigs to enable them to use less expensive radios for the marine services. Using this equipment, without knowledge of applicable regulations, mariners transmit on many, many frequencies not designated as HF Marine channels (or ham bands). The result is occasional interference with other services.

I've been told there have been a few boaters who have been fined, but this notice sounds like turning up the heat.

hOW ABOUT ON YOUR hf rig as well ??? How about "channelizing" your rig so you can only transmit (albeit with .o1%,or whatever it is, frq stability) on switch selected discrete channels ?

And there are probably other "type acceptance" restrictions that hams would find difficulty with....eg no home brew xmtrs allowed, etc.

No, type acceptance of ham gear is not the answer. Let's not punish the good guys !!!!!!!!!

There is a very interesting book about the history of amateur radio
in Germany, by Felix Koerner. Now it is out of print, if I remember
well. In this book you will find extensive information about the
complex history of amateur radio during the nazi time. It is probably
more complex as you think. Perhaps you can find a copy in the library
of an university.

I would certainly hope that the person who took this key will have the
common sense to send it back to its owner. I saw this beautiful piece at
Mitch's booth and am saddened that someone would steal it. Its definitely
a one-of-a-kind piece and only of value to the person whose call sign is
engraved it. If you were the one who took it or know who did olease send
it back to Mitch right away.

I have heard in recent years of things disappearing from tables at flea
markets. This was virtually unknown in past years. We have enough
problems with our hobby these days without adding thievery
to it.

Anyone got any information on the upcoming
Flagstaff hamfest at Ft. Tuthill??

I'm interested in attending and would like
to make motel reservations now.

Thanks,
Russ - AA5FP

This information is widely available; however, the "reason for
the reastrictions" is imbedded in federal law. The radio you
mentioned is an amateur radio unit and not authorized for use
outside the amateur band.

I presume, since you have the radio and seemingly intend to use
it, that you do have an amateur license.

Regards,
Carl

Mr Reed,

We won't need that anymore in the 21'st century. People who use cell phone don't have to pass a theory exam, or phone operation exam ?

Why bother with exams, and electronics or antenna theory ? I just want to talk to my friends down the block.

That's the kind of whining you should expect if CW requirements are abolished. In French we say "give them a finger they will soon ask for an arm". Do you expect the whining to stop when CW will no longer be required (hope not!). In this day and age of "I want everything now, and I am not ready to make any effort to get it" your plan is just a recipe for ...

Don't start building gettos: Phone guys here, CW guys there.

Amateurs around the world constitute a fraternity because they have to go through an identical process of Initiation. We are an Open Secret Society. Like ancient societies, we have the novices, the advanced and the masters. Remove the initiation, the CW "monster" and you will just get a bunch of people talking.

Mastering Packet, SSTV or any digital mode is nothing. Any "appliance operator" can buy a rig, a set of digital boxes, an antenna. Have the whole thing installed, click on the ON switch and start transmitting.

If some people are not ready to make a minimum effort to learn something "difficult" they have the Internet. No Code, No Exams, they can talk to people around the World, and receive QSL's electronically in microseconds. But maybe they prefer radio because it is free ?

Lower the requirements for CW to access HF band but don't abolish it. If you do, in just a few years, the same congenital whiners will ask for removal of the theory exam.

As small as it is, mastering CW is a skill that cannot be mastered overnight. one needs obstination and patience. Very few people are proud of passing the theory test, all Hams are proud of passing the CW test. Do you know why ? Because any exam in which you answer questions can be passed. Especially multiple choice and when you can buy for 20$ the "question bank".

To pass the CW test, there are no tricks, no memorisation, no nothing. YOU KNOW IT OR YOU DON'T and that's what scares those who complain all the time about CW.

"A vaincre sans peril on triomphe sans gloire" (Winning without peril is a triumph without glory). A Ham licence without any CW is just a CB licence!

That's what makes us Ham Radio operators.

Madjid BOUKRI VE2GMI

2135. Mission Control (was: beep after tx)

I observed that a beep was heard before and after each transmission from Mission Control. The astronauts had no beeps on their transmissions. This apparently served to differentiate the Mission Control transmissions from those of the crew.

Also, they operate full duplex. I often heard astronauts interrupting each other. What kind of system did they use? Was Mission Control's channel also full duplex? Did each astronaut have multiple receivers to facilitate this?

Hey Cecil, How comes they didn't call it .cw instead of .policy ?
Someone sent me the riot act last week about putting stuff
in the wrong group too (via private email). Congratulations on
having the cookies to do it in the newsgroup. Up until the
time I got reamed, and judging by all the stuff I had been
reading, I had no idea the Information Stupid Highway even
had any rules. I guess you learn something every day. But
seems like Internet rules are like Guam laws - why write them
if nobody enforces them ....

*****ARRL NEW ENGLAND DIVISION SPECIAL BULLETIN 96-9A*****

QST to all Amateurs

May, 1996

Strafford, VT

------------------------------------------------------------------------

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

------------------------------------------------------------------------

********** 2 Meter AND 70 cm BANDS THREATENED **********
----------------------------------

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
```

LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ (THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF BANDS!

I have included the text of Dave Sumner's upcoming editorial for July QST in this bulletin. ARRL, as the principal representative of Amateur Radio in Washington, is actively pursuing this issue as this bulletin is being written. Dave's call to action is serious!! We could lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.
In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."
Hold that thought while we shift gears to the substance of the issue.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already

have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time. We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP

2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.
To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

2140. Maryland-DC QSO Party Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: eab@VOA.GOV
Message-ID: <Ds6vF7.Lq1@VOA.GOV>
Source record: 224299

The Antietam Radio Association presents the Maryland-DC QSO Party on
August 10 1600Z to 0400Z August 11 and 1600Z to 2359Z August 11, 1996.

Phone & CW. CW QSOs in CW Bands only. Stations May be worked once
per band using each mode. Only Single operator stations are
permitted outside the Maryland-DC Area.

AWARDS: PLAQUES to: (1) High Scoring Single Operator from MD-DC
(2) The Top non-MD-DC Single Operator Station Entry
(3) The MD-DC area club with the high scoring entry
CERTIFICATES to:
(1) All with 50 or more QSO Points in Entry !!!!
(2) The 10 Best MD-DC Single Operator Logs
(3) Best log from Each U.S. State
(4) Best Log From Each Canadian Province
(5) Best log from each DX Country
(6) Best MD-DC Mobile Entry
(7) Best YL Entry from MD-DC
(8) High QRP Entry from Each State
(9) Best Novice/Tech Entry from Each State

The Rules
1. Non MD-DC Stations must work only MD-DC Stations. MD-DC Stations may
work anyone.

2. Portables and mobiles that change counties during the test count as a
separate station in each new Maryland county of operation. Sorry, no packet
or repeater QSOs allowed. QSOs part of a regularly scheduled net are not
allowed.

3. Exchange: QTH & Major Category of Entry. QTH is County for MD-DC Stns.
Use U S State, Canadian Province or DX Country as appropriate for non MD-DC
stations. MAJOR CATEGORIES are CLUB, QRP, MOBILE, Novice/Tech.
and STANDARD. Stations should send the major category that reflects their
HIGHEST POINT VALUE.

4. Suggested Frequencies (mode appropriate) 3.92 7.23 14.26 21.37
28.38 50.15 Simplex 2 mtrs & above + 3.643 3.701 7.035 7.126 14.04
21.115 28.04 28.115 CW is encourages and suggested use on odd
half hours examples 1730 1930 2130 etc.

5. SCORING For Non MD-DC Stns Each MD County + Baltimore City & DC are
Multipliers (25 possible)

For MD-DC Stns The basic 25 above + each of the other 49 states + each
Canadian Province +each other DX Country (rule change this year!)

Multipliers may be claimed one only. They do not repeat on each band.

6. QSO Points: 10 points for CLUB Stn QSOs
5 points for MOBILE Stn QSOs
4 points for QRP Stn QSOs
4 points for Novice/Tech Stn QSOs
3 points for CW or RTTY QSOs (RTTY & CW same mode
for scoring)
1 point for any other valid contact (Voice, ATV, etc.)

HIGHEST SINGLE POINT VALUE APPLIES (Example Contact with a mobile club
station is a 10 point QSO.

7. Final Score : Add up QSO Points and Multiply by the total Multipliers

8. Send Logs with S.A.S.E. by September 10, 1996 to:

Antietam Radio Association (W3CWC)
P.O. Box 52
Hagerstown, MD 21741

Hope to see you in the test. DON'T FORGET THE AUTOMATIC CERTIFICATE
TO ALL ENTRIES WITH 10 OR MORE QSO POINTS IN ENTRIES!

73,
Ted Lawhead WA3AAT Chairman (WA3AAT@KD3O.MD.USA.NA)
Page Pyne WA3EOP Co-Chairman (WA3EOP@KD3O.MD.USA.NA)

SB QST @ ARL $ARLB031
ARLB031 Vanity call update

ZCZC AG11
QST de W1AW
ARRL Bulletin 31 ARLB031
From ARRL Headquarters
Newington CT May 29, 1996
To all radio amateurs

SB QST ARL ARLB031
ARLB031 Vanity call update

Vanity call sign filing Gate 1 opens May 31!

Gate 1 of the vanity call sign program opens May 31, and eligible hams may file applications on or after that date.

Under Gate 1, you can file for a previously held individual or club call sign or for a call sign formerly held by a deceased close relative. Specific eligibility criteria are below. To request a vanity call sign for your primary station, you must already hold an unexpired amateur operator/primary station license. To obtain the former call sign of a deceased close relative, your license must be of the proper operator class. To request a vanity call sign for a club station, you must also hold an unexpired club station license listing you as the trustee. Vanity call sign applicants must use FCC Form 610-V to file.

Applicants should refer to the licensee data base to make sure the call sign they are requesting is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee. FCC Fact Sheet PR-5000 Number 206-V, Amateur Station Vanity Call Sign System, has details. For explanations of Groups A, B, C and D and the geographic Regions, see Fact Sheet PR-5000 Number 206, Amateur Station Sequential Call Sign System.

Legibility is critical! If your application is not legible, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want.

Gate 1 Eligibility Criteria

Request by Former Holder (Primary Station): For your primary station, you may request a call sign that was previously assigned to your primary, secondary, repeater, auxiliary link, control, or space station. You may request your former call sign even though it has been unassigned for less than two years. The two-year requirement does not apply to an otherwise eligible primary station if the call sign was previously assigned to a station of the requestor. You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested. A call sign request by a former holder may be from any group in the sequential system. Your mailing address does not have to be in the region designated in the sequential system for the call sign requested. A call sign requested by a former holder may be in any region.

Request by Close Relative of Former Holder Now Deceased (Primary Station): For your primary station, you may request a call sign that was previously assigned to the primary, secondary, repeater, auxiliary link, control, or space station of your now-deceased spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law. You may request the former call sign of a close relative now deceased even though it has been unassigned for less than two years. Upon the death of the holder, a call sign is assignable immediately to an otherwise eligible primary station of a close relative. You must be an Amateur Extra Class operator to request a Group A call sign. You must be at least an Advanced Class operator to request a Group B call sign. You must be at least a Technician Class operator to request a Group C call sign. You must be at least a Novice class operator to request a Group D call sign. Your mailing address does not have to be in the region designated in the sequential system for the call sign requested. A call sign requested by a close relative of former holder now deceased may be in any region.

Request by Former Holder (Club Station): For the club station for which you are the license trustee, you may request a call sign that was previously assigned to that station. You may request your club station's former call sign even though it has been unassigned for less than two years. The two-year requirement does not apply to an otherwise eligible club station if the call sign was previously assigned to the club station for which the requestor is the license trustee. You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested. A call sign request by former holder may be from any group in the sequential system. Your mailing address does not have to be in the region designated in the sequential system for the call sign requested. A call sign requested by a former holder may be in any region.

A $30.00 fee is required with your FCC Form 610-V application. Payment of fees may be by check (payable to "FCC"), bank draft, money order or credit card. If paying by credit card, you must also

complete and submit FCC Form 159 with your FCC Form 610-V. Do not send cash!

Send your application package to: Federal Communications Commission, Amateur Vanity Call Sign Request, PO Box 358924, Pittsburgh, PA 15251-5924. If you do not qualify under the above eligibility standards, your application will be dismissed.

The FCC says it will announce Gate 1A in a future notice. Under Gate 1A, club station trustees may file for the former primary station call sign of a person now deceased, provided the club held a club station license on March 24, 1995.

For more information about the vanity call sign program, call the FCC Consumer Assistance Branch, 800-322-1117.

Hi Ron, that's sounds like an interesting test. How do you simulate
'conditions almost twice as bad as what a nuclear war would
cause', do you set up the transmitters in a garbage dump in New
Jersey, or what ? Just curious.

Burt, you might not be aware of it. Your psyche is exactly, what that book talks about.... Uninformed prejudice as a foundation for insensible, though arrogantly righteous behaviour. Before you react to this, think a single moment, maybe you might see the truth of this statement. But then, I doubt that you would ...

SB QST ARL ARLB032
ARLB032 Band threat - part 1

Amateurs Mobilize Against Threat to 2 meters, 70 cm - Part 1 of 4

The American Radio Relay League is asking radio amateurs across the United States to help defeat a threat to the two most heavily used amateur VHF and UHF bands.

An industry working group known as IWG-2A that is preparing draft US proposals for the 1997 World Radiocommunication Conference has before it a list of ''candidate bands'' for low-earth orbit mobile satellites (''little LEOs'') that includes, among a number of others suggested for consideration, the 144 and 420 MHz bands. Little LEOs are intended mainly to offer commercial paging and other low-data-rate messaging services. The list of candidate bands was submitted by little LEO industry representatives at a meeting of IWG-2A on May 7. ARRL Technical Relations Manager Paul Rinaldo, W4RI, was present and objected strongly to the inclusion of these two bands. He was told that objections should be submitted in written comments, and the ARRL did so on May 15. At the same time the ARRL advised the industry participants in IWG-2A along with its chairman, Warren Richards of the Department of State, that if we did not receive assurance that the bands would be dropped from the list of candidate bands we would have no choice but to advise members in July QST that the bands were under threat. No such assurances were forthcoming. Instead, we were told that as long as little LEO allocations requirements remained unsatisfied, everything had to remain on the table.

This response was not acceptable. Accordingly, when July QST went to the printer on Tuesday, May 28, it included the following editorial. The editorial speaks for itself, but it is worth emphasizing that there is no reason for panic. What we are dealing with is an ill-considered industry effort that is in its early stages, there is

no reason to believe there is any government support for any move against these two amateur bands. Our mission is to quash the idea before it goes any further. An outpouring of thoughtful comment by amateurs, explaining why the public interest would not be served by the introduction of commercial services into these bands, will go a long way toward ensuring the desired outcome.

The editorial may be reprinted in its entirety with the credit line, ''Reprinted with permission from July 1996 QST.''

ARLB033 Band threat - part 2

Amateurs Mobilize Against Threat to 2 meters, 70 cm - Part 2 of 4

It Seems to Us, July 1996 QST:

Write Now. Get out a pen and paper, or boot up your computer. There's work to be done. Your help is needed to defend two meters and 70 cm. Yes, that's right--the two most popular and crowded amateur VHF/UHF bands. But don't panic, and don't ''go ballistic.'' Here's what's happening, and what you can do about it.

The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: ''Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee, the Chairs of the Advisory Committee's Informal Working Groups, Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee, or to Damon C.

Ladson, the alternate federal officer.'' Hold that thought while we shift gears to the substance of the issue.

SB QST ARL ARLB035
ARLB035 Band threat - part 4

Amateurs Mobilize Against Threat to 2 meters, 70 cm - Part 4 of 4

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again. Which brings us back to that invitation for ''interested parties'' to send input ''at any time.'' There's no time like the present. Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554, choliday@fcc.gov, fax 202-418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520, richardswg@ms6820wpoa.us-state.gov, fax 202-647-7407.

Tracey Weisler, FCC Rep, IWG-2A, International Bureau, FCC, Washington, DC 20554, tweisler@fcc.gov, fax 202-418-2824.

Mary Kay Williams, Final Analysis, Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD 20770, fax 301-474-3228.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public

interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/. Write now. Right now.

SB QST ARL ARLB034
ARLB034 Band threat - part 3

Amateurs Mobilize Against Threat to 2 meters, 70 cm - Part 3 of 4

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile-satellite service. So-called ''little LEOs,'' low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests. At the May 7 IWG-2A meeting, an industry representative proposed a list of ''candidate bands'' for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected--the point being that some political, rather than purely technical, judgment already has influenced the list. Incredibly, 144-148 and 420-450 MHz were included on the list. This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television--the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that--both at the meeting

and in a follow-up letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile-satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

Continued in part 4 (ARLB035).

>crime so to speak.

John Johnston, W3BE, Assistant for Personal Radio Services, Private Wireless Division, Wireless Telecommunications Bureau, FCC, spoke on this at teh FCC Forum at the Dayton Hamvention. The Commission is targeting the ten meter rigs that are being sold by CB dealers that are blatently intended for illegal overpowered CB and out-of-band operation. There is no hidden or other sinsiter agenda in this. It was always illegal, but they are apparently now saying that they are going to start cracking down.

I've seen this sort of thing in a particular CB catalog that for some reason they keep sending me even though I called their 800 number and asked them to stop. There among all the CB stuff, right along with the reverberating mikes and devices to make obscene noises on the air, is a line of "ham radio transceivers" with all kinds of "upgrade" chips. It doesn't take rocket scientist intellect to figure out what the "upgrade" is all about.

Hi Scott, The handwriting is on the wall. Commercial interests are dropping HF and turning to VHF/UHF. As time goes by, hams will have more and more HF frequencies and fewer and fewer VHF/UHF frequencies. Another thread says 2m and 70cm is under attack by commercial interests. How would you like to do without them? Better start practicing for a general class license.

Source record: 224319

Hello.

I am Igor. I live in Daugavpils, Latvia. Latvia is a small country
near Baltic sea (east Europe).
The digital radio communicatios are new for us. I have two problems
using digital radio links.

1. There are two establishments on distance approx. 1 km. In each
establishment working local network (Ethernet). How to connect
its using radio link? What max. baud rates I can get on 430MHz,
1240MHz ? What modems designed for that and what prices ?
What radio stations need for this targets (standart or special)?

2. How to made multiuser Internet access via radio. Not need high
speeds for that. I think about 9600 bps. What hard- and software
you can recommend ?

I am a novice in this things. I shall be glad to get any information.
By the way, if you a radio equipment dealer (better in Europe),
please write your prices...

Thank you.

73!

2163. Re: 21st Century Ham Licenses

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: thompson@atl.mindspring.com
Message-ID: <4ogc6k$19t6@mule1.mindspring.com>
Source record: 224351

What Jim is proposing is a simplification of amateur radio licensing not only in the USA and canada, but on a world wide basis. He is not advocating stepping on anyone and his plans keep Cw mainstream, but capped at 13WPM not 20.

His proposal is a response to FASC/IARU doing their duty and calling the question regarding the CW requirement in light of a country proposing eliminating CW as a requirement and most armed forces dropping CW in favor of digital et al.

A proposal like this is crucial if amateur radio is to continue. IT IS MORE CERTAIN EACH DAY THAT THE STATUS QUO WILL NOT CARRY US INTO THE 21st Century.

Don't flame Jim..make your views known and think before you speak!

>But what possible use could such information be put to?

Boy, this is a record (if true) 5wpm-20wpm with only 8 days
of consistant effort. What is your motive to post this?

Many are trying to pass the code test and wonder when they
will catch on. I can't think of a better way for them to
get an idea than this thread. (I've already passed mine).

>The numbers will vary so much from one to the next, that someone

>the average time without "getting it". Either way, no good can come
>of it.

It can give the average joe a rough idea of whether he wants
to invest the time to learn code. It varies greatly, but the
average for 13wpm seems to be 3-6 months from the replies I've gotten.
With extremes (you) at 3 days and another persistant fellow at 11 years.

>That you ask the question suggests impatience, and desire for quick
>gratification, so you are doomed to have a hard time. Asking the
>question indicates you consider this hard work, so it will be.
>-73-
>KO0B

It was hard work, and I really had no interest in CW other than
to get my HF voice priveledges. I passed. Some love CW, some hate CW.

Heehee - it's interesting that he didn't comment about the core of
my rebuttal to him: To compare the military to the amateur service
is utterly ridiculous - they have billions of dollars to create
a virtually impenetrable communication system immune to practically
anything. Their mission is 180 degrees from ours. To compare our use
of CW to military comms is an apples to pineapples item.

I have a Casio calculator that makes this easy to do. It has a degrees-minutes-seconds key, you enter degrees, hit the key, enter minutes, hit the key, enter seconds, hit the key. The display converts to decimal fraction. The calculator is an Fx-115M and was only about $15. I bought it because it does hex to decimal conversions as well.

I have used the degrees-minutes-seconds key to add up times too, like to see if the blank tape I have is long enough to copy a record.

Using a calculator to do this will be just as fast as using a computer. The time is in the data entry.

Since each application needs a fee, there is not much question that
you will pay another fee.

>If I wait until gate 2 to make any change then K1EPJ would be my 25th choice.

Think if you read the instructions and the application carefully, you
will find that if none of the calls you choose are available, you will
get your current call assigned. Ergo, don't waste that 25th choice.

A large, FREE, and searchable Ham Radio Classified page. All posts only concern the buying and selling of Ham Radio equipment.Posts are put online within the hour. Here is what one Ham said about the service.

"I had some ham radio stuff for sale on your web page, got several responses and sold my HAM-M rotor...I have also tried to sell my rotor before, on and off for a few years, and it only took a week to sell it through your page thanks for your service."

2184. Amateur 2 and 3/4 Meter Bands May Be in Jeopardy

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: zut@cais.com
Message-ID: <zut.84.00729713@cais.com>
Source record: 224372
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The text below my comments came via off the ARRL Bulletin mail list today.

After you read the bulletin text below and you chose to respond to the people listed, I suggest you keep your comments short and succinct as I doubt they will read what comes in this first volley word-for-word. I'm sure the IARU will fill them in on all the minutia. It's probably more important to let them know that there a lot of us out here who oppose the Low-Earth-Orbit industry proposal to have the 2 and 3/4 meter bands reallocated to them.

Above all, I'll repeat (quote) the closing comment. It's exceptionally good advice.

"Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side."

73,
Tony Stalls, K4KYO

*****ARRL NEW ENGLAND DIVISION SPECIAL BULLETIN 96-9A*****

QST to all Amateurs

May, 1996

Strafford, VT

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

********** 2 Meter AND 70 cm BANDS THREATENED **********
_____

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT (LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ

(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could
lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to
be done! Your help is needed to defend two meters and 70 cm. Yes,
that's right -- the two most popular and crowded amateur VHF/UHF bands!
But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World
Radiocommunication Conference, WRC-97. In the past, the public has been
able to participate in the preparations for such conferences by
responding to FCC Notices of Inquiry. In March, the FCC announced a
streamlining of its International Bureau's preparatory processes for
WRCs. Under the new scheme, the NOIs have been eliminated in favor of
increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the
Advisory Committee has been created to address specific agenda items.
The output of each IWG will go directly to a joint FCC-NTIA-Department of
State Steering Committee of the Advisory Committee. There, draft
proposals as received from the IWGs will be reviewed and forwarded to the
FCC for possible release as preliminary U.S. proposals for public
comment.
In announcing the streamlined WRC preparatory process, the FCC tried
to reassure those who might be concerned about reduced opportunities for
public participation: "Interested parties should note that input to the
Advisory Committee may be sent at any time directly to the Chair of the
WRC-97 Advisory Committee; the Chairs of the Advisory Committee's
Informal Working Groups; Cecily C. Holiday, the FCC's federal officer
of the WRC-97 Advisory Committee,on C. Ladson, the alternate
federal officer."
Hold that thought while we shift gears to the substance of the
issue.
One of the WRC-97 agenda items includes consideration of possible
additional frequency allocations for the mobile- satellite service.
So-called "little LEOs," low-earth orbit satellites below 1 GHz, already
have allocations. Their proponents claim these are inadequate and are

trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-

state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.
To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.
Write now. Right now! -- David Sumner, K1ZZ

>Are you being serious here? You mean that you couldn't figure out
>he meant whiner vice whinger? A simple typo, don't be so critical.

Very serious. Turns out the fellow mentions "whinger" means something
in Aussie land, if you read other posts, but he didn't elaborate.

>> Whose the minority group? No Code Techs are growing by leaps and bounds,
>> while HF Hams are dropping like flies. My guess is the average age
>> of hams on HF is 70, and rising yearly. No Code Techs will rule all

2187. Another Ramsey kit to avoid

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDs68Gx.5E5@netcom.com>
Source record: 224375
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Looks like I fell for it again, and bought another Ramsey kit (when will I learn :-)

I picked up the FM-6 "Crystal Control Micro Size FM Transmitter Kit", hoping to use it as a Fox transmitter. It seems that enough calls were made to get them to use a crystal other than one for *144.0* MHz; now it is supposed to be on 146.565 MHz (the Fox frequency) +- 50KHz; mine is right on the 146.64 Waltham repeater's output, among others.

This is a surface-mount kit with a varactor-tuned crystal oscillator around 12 MHz followed by a quadrupler and a tripler to get to 2M. What it *doesn't* have is ANY filtering. I put it on the spectrum analyzer, and it is a very nice comb generator, with spurs every 12 MHz (including the aircraft band and FM broadcast band) These spurs (as well as the 2nd harmonic) are at most 5-10 dB down from the fundamental.

I called Ramsey, and their only response was "Look in the ARRL handbook and add a filter"; they will not take it back even though, if assembled correctly as per their instructions, it is *not* legal to use.

Also, this is advertized as a bug or surveilance transmitter, and not until the very end of the manual does it mention:
"The FM-6 operates in the 2 meter Amateur radio band and should be used by or under teh direction of a properly licensed ham operator."

So it looks like another Ramsey kit to avoid...

On the other hand, I am just finishing up the Ten Tec 2M kit; that's one very nice kit, and I would recommend Ten Tec kits to anyone who wants to get into kit building...

[snip]

Might just be appropriate to do it, ya know. I'm uncomfortable just yet
with the sort of sketchy information we have to go on so far.

If indeed the incident is as described, and the radio was an HTX-202,
there is no way the case could stand up in court. The whole thing sounds
like a badly told annecdote, even.

Anyhow, if it's the crock we think it is, that local PD will feel the
heat of public scrutiny, and the cost of a possible counter-suit.
The "officer" (is that being charitable?) in question will have to
explain to his boss and boss's boss why he has dragged the department
into this public quagmire. He ought to get the chance to look for other
employment real soon.

I just hope there is a way to get this kid a good attorney to be
sure it happens that way.

********** 2Meter AND 70cm BANDS THREATENED **********

THIS IS NO JOKE!!
ARRL has learned of a potential threat to the two most popular UHF/VHF amateur frequency allocations. In preparation for the 1997 WRC, representatives of the Low-Earth-Orbit (LEO) industry have proposed a list of candidate bands for allocation to the mobile satellite service. This list includes 144-148mhz and 420-450mhz. At this point neither of these bands has been singled out as a primary candidate, but their simple inclusion on this list is of MAJOR concern.
Quoted below are excerpts from an editorial prepared for the July issue of QST by Dave Sumner, K1ZZ. For the full text, see the July issue of QST, now at the printers

---

Get out a pen and paper, or boot up your computer.
There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile-satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.
Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

--

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; cholidaY@fcc.gov; FAX (202) 418-0748.

That is why I included the time between "intensive" study periods.
Add those up, and you come up with over a year.

I was operating a LOT during those periods, and I suspect that, even
though my speed didn't come up much, the old noodle was becoming
conditioned to the patterns, making those "intense" sessions have a
lot more effect ,a lot faster. It probably didn't hurt that the
sound of rapid-fire CW became associated with excitement of exotic
DX, rather than drudgery of another practice session.

I am pretty sure that _I_ could not have done with so little
intensive study without lots of on-the-air operating.

The Intensive study was also quite important, however.
I found it very difficult to build speed on-the-air. The best way
(for me of course...your milage will vary) to build speed was to use
tape where I could only copy maybe 10- 20% at first. Hard to hold
QSO like that. Also hard on the nerves... first sessions go for only
10 or 15 minutes...longer as copy % improves.

> What is your motive to post this?

Motive: To make the point: learning the code depends on individual
quirks, attitude, and too many other factors to list much less
quantify. The time required is dominated by the learner, methode,
etc. rather than the material to be learned. It draws upon a
combination of talents that are not used in other persuits. (though
are probasbly closely tied to language learning) It just isn't
possible for an aspiring (non mode-challenged) ham to predict how hard
it will be , or (even ballpark) how long it will take, him/her untill
they "just do it". Applying an average to an individual case is an
abuse of statisics....If this were not so, I could easily predict your
death by checking your odometer, and consulting the published fatal
accident statistics for that year and model of car.

There are also several different ways to measure "how much time" as my
posting (and your response) illustrated.

Time and energy spent analyzing the difficulty of the task is better
spent with a code tape, a walkman, and a pad of paper.
Any such analysis is bound to breed anxiety, which will surely
interfere with learning. I suppose that's human nature though...to

spend 5 minutes finding a parking space 30 seconds walk closer to the entrance...and be proud of it.

Hams represent a sampling of nearly any conceivable combination of talents and personality traits. Untill a few years ago, all have been successful at learning the code. The ability to learn code seems to be as universal a talant as the ability to learn language. It is thus a near certainty that anyone who wants to learn code, _can_. Whether they _will_ is up to them.

Achieving a worthy goal requires an attitude of commitment and resolve. Commitment made conditional to the level of difficulty, time involved, or outcome, doesn't deserve the name. Such "commitment" is more accuratly discribed as only a "deal" or a "bargain".

If someone only wants to do it if it is quick enough, or easy enough, then the plain fact is that they don't really want to do it... and shouldn't.

ko0b

Bandwidth is a finite resourse, too precious to waste irresponsibly on inefficient modes, excessive power, and operators too lazy to study code.

Beauty is too complex to be judged by by looks alone, much less similarity to Sports-Illustrated bathing costume models

A lifetime is too long to spend knowing you could have done better, if only you'd taken the time, and made the effort.

2195. CB bootleggers on 10 meters

Newsgroup: rec.radio.amateur.misc

Hi,

Ten was really open Tuesday night. As I was moving from the FM segment (29.4 to 29.7) down to the AM segment (29.0), I heard some unbelievable filthy language on 29.225 LSB. Apparently, some CB types have decided to make 10 meters their home. I believe the signals may be coming from New York state.

Any one else heard this garbage?

Jack, WB8BFS, Cincinnati...

2196. Don't want to learn code? Use VHF!

I dunno what all of the stink is about. A No-Code Tech
license gets you access, FULL access to over 98% of the
Amateur Spectrum! You can only do 300 baud below 30 MHz
anyway, and can hardly talk to someone across town!

HF requires large antennas. HF Radios are expensive.
Propagation is spotty at best. Sure, 20m may be the
backbone of communications, but to predictably
work into Europe on HF? Use the phone - it's much
cheaper anyway (10 cents/minute). Use the Internet
(cheaper still!). Use moonbounce :-)

I guess what I'm saying is that the code/no-code debate
isn't a debate at all! No-coders have 6m and up!
Satellites! High-speed packet! ATV! SSTV! Clover!
High-speed microwave links! It's EVERYTHING you want!
There's TONS of room for everyone up there!

So quit whining about not having access to HF. It's
a challenge to operate, as is learning CW. In other
words, if you don't see the challenge in learning CW
as a challenge, you wouldn't like HF anyway.

Use those microwave bands before the commercial
interests come along and decide they want it instead,
and are willing to pay megabucks for it.

2197. Ham VHF/UHF frequencies at Risk Again!

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: Carl Estey <carl.estey@HBC.Honeywell.com>
Message-ID: <31AC89E9.3F4E@HBC.Honeywell.com>
Source record: 224385

Dear Fellow Amateur Radio Operator:

I have just received the following advanced copy of the July 1996 QST editorial written by K1ZZ from Tod Olson, K0TO, and it focuses on an issue near and dear to many of us - specifically, the potential loss or sharing of our VHF and UHF frequencies with commercial services.

Please do three things TODAY -
1. Read the editorial.
2. Write letters to those listed in the editorial. Be rational and not emotional. Tell them sharing is not in the public interest.
3. Pass the editorial on to as many other concerned folks as you can.

Experience shows that what works best is MANY, MANY filled mail bags to governement officals. Post cards work well too - but the objective is to get a large volume of mail to these folks real quick and make sure they shift
their interests to someone elses frequencies and not OURS!

By your help ... and letter writing right now, we can help protect our frequencies and make sure we have the capabilities in the future to continue
to serve the public good! Write TODAY!

73, Carl Estey WA0CQG

==========Beginning of editorial==========

Write Now!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."

Here's what's happening, and what you can do about it. The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry.
In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of

State
Steering Committee of the Advisory Committee. There, draft proposals as
received from the IWGs will be reviewed and forwarded to the FCC for
possible
release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried
to reassure those who might be concerned about reduced opportunities for
public participation: "Interested parties should note that input to the
Advisory Committee may be sent at any time directly to the Chair of the
WRC-97 Advisory Committee; the Chairs of the Advisory Committee's
Informal
Working Groups; Cecily C. Holiday, the FCC's federal officer of the
WRC-97
Advisory Committee, or to Damon C. Ladson, the alternate federal
officer."

Hold that thought while we shift gears to the substance of the
issue.

One of the WRC-97 agenda items includes consideration of possible
additional frequency allocations for the mobile-satellite service.
So-called
"little LEOs," low-earth orbit satellites below 1 GHz, already have
allocations. Their proponents claim these are inadequate and are trying
for
more. The needs of little LEOs are being addressed in IWG-2A, chaired by
Warren Richards of the Department of State. The ARRL technical relations
staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a
list
of "candidate bands" for little LEOs. The list includes a number of bands
that would negatively impact existing services, and does not include
others
that would be technically more feasible but to which strong objection
from
incumbents could be expected -- the point being that some political,
rather
than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This
is
the first time in memory that another service has been proposed for the
two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is
made of these bands by amateurs. The two bands provide the backbone of
our
local public service communications effort. Voice and data, mobile and
fixed, even television -- the list of present amateur uses is a long one,
and of future uses is even longer. Both are already used for satellite

services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and in a followup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background inradiocommunication could possibly believe that a mobile-satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.

Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.

Leslie Taylor, President, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are
simply doing their jobs. We have to get across that casting
covetous eyes on amateur bands is counterproductive, and
contrary to the public interest. To accomplish this we
need a lot of comments, including yours. But remember that
the objective is to educate and persuade, not to intimidate. We
don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit
its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could
lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to

srwhite@ibm.net wrote:
: In <4o4c19$f0u@news.halcyon.com>, gfiber@halcyon.com (Gary Fiber) writes:

: >PUBLIC NOTICE
: >FEDERAL COMMUNICATIONS COMMISSION

: > Extended Coverage High Frequency Transceivers

: > The purpose of this Public Notice is to clarify...

: It ranks right up there with blocking cellular...
: The problem of unauthorized out of band transmission will not go away
: that easily...

: I would support building 10M rigs and CB's so they cannot be modified
: to go into the CB band or 10M band respectively...

This ranks right up there with blocking cellular!

: Again, this won't eliminate the problem, but make a very small dent...

Then why bother? No law is worse than a bad law.
There are many uses for a DC to 30 MHz signal generator,
er, uh, ham radio, and many radio amateurs use them in a
responsible manner. Why punish them? Ditto for 30 MHz
to daylight in the commercial world.

: Why not Type-Accept VHF/UHF+ ham tranceivers?? Have you every compared
: some of the specs from HAM vs Commercial gear?? On a particuar ICOM
: 2M HT, frequency drift is stated not to exceed 5 Khz...

: If that's what type acceptance will bring, then I am willing to pay for it!

5 KHz?!? What a piece of junk. The best way to deal with
this problem is the free enterprise system; don't buy it!
If you want quality equipment, you must pay for it. If you
want a type accepted VHF or UHF transceivers, you can do
that today. Just go and lay down your money for an MT-1000
or something like that, but don't force others to do the same.

If there is a demand for something, the manufacturers will
build it, so long as we aren't stupid enough to create laws
banning it. Rather than doing that, how about calling your
congresscritter and demanding more money for FCC enforcement?
Their budget cuts have resulted in a downsizing from 2600
people to 2200. Therein lies a problem as the number of
services that they manage grows daily, thus, enforcement is
becoming virtually non-existant.

Cheers -- Mark

Gee, Eugene. . . . . If you know how to do it on a calculator, then
why don't you just write the algorythm into a spread sheet?? Or even
write a gwbasic program to do it?? I would like to have such a
program. I don't know the steps, but they should be fairly simple.
Why not give it a try??

Please contact me by e-mail, and I'll even write one for you. Just
tell me the steps.

Sounds like a good job for a spread-sheet. Take your pick.

Me, I use a programable calculator....actually HP-41 has this
function built in.

Forrest:
All of the data I've seen on Internet and magazines is true about the 706. It's well documented in terms of good points/bad points. I like it very much and researched prior to buying (check DejaNews for old articles from Usenet on "IC-706").

I have been collecting Hustler resonators and even making my own. My first night on 20 SSB brought-in Hawaii, first call, not bad. I've been into Europe and Central America with ease too. Dave Ingram's book on mobiling is a good resource for useful info (e.g., did you know you can use a Huster 15 M resonator with a longer 42" whip for 20?).

2206. Mobile Noise Help

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-29 00:00:00 UTC
From: csmith1@ccgate.hac.com
Message-ID: <4oic8d$gcc@newsroom.HITC.COM>
Source record: 224394
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I've grounded the HF rig with heavy braid, direct-connected to battery with
No. 10 wire, and grounded the hood, engine (2 places) and exhaust pipe to
the body and/or frame. The antenna is mounted on a well-grounded plate.
Everything works great, except for a noise problem I can't seem to
locate. I tried an alternator filter (heavy series coil and shunt cap) that
didn't do anything--so, that, along with disconnecting the antenna making it
go away makes me think it's radiated noise.

I get a rushing hash (like white noise) only when the engine is under load.
It is enough to wipe-out weaker stations, but not those louder ones.
I throw in the clutch and it goes away, even if I then race the engine
(leads me to think it's not ignition, but some sender unit--perhaps
fuel injection electronics radiate only under load?).

What device or other cause might do this? I'd like some help before
trial and error decoupling whatever I find under the hood <g>)

I don't have an answer, but maybe if I "think out loud" I might get
you thinking of something which will make things fit into place.

csmith1@ccgate.hac.com (Chris Smith, NR3O) wrote:
>I get a rushing hash (like white noise) only when the engine is under load.
Hmm. "Only under load" makes me think spark leakage (Higher voltage
under low vacuum) But that sould be a tick-tick-tick...or a low buzz
if on all cylinders at high RPM. Ignition noise is often dependant on
manifold vacuum (worse when low) and low vacuum is hard to get without
a load on engine. (meaning that racing engine with clutch in doesn't
cause ignition voltage increase)

Rushing hash makes me think computer noise, EFI or even a electric
fuel pump.

I guess fuel pump noise _ might_ be flow dependant??

>It is enough to wipe-out weaker stations, but not those louder ones.
>I throw in the clutch and it goes away, even if I then race the engine
>(leads me to think it's not ignition, but some sender unit--perhaps
>fuel injection electronics radiate only under load?).

Fuel injectors _might_ be it. Maybe your EFI pulses the enjectors
more times (not ususl setup, usually it's longer pulse) under load.

I have seen injector drive circuits which give large "open" current
pulse followed by smaller holding current. I suppose "progress" may
have given us regulation of the hold current by switching setup....In
that case, you'd get the switching hash only when fuel flow was
higher, and required injectors to open for longer than initial pulse
width.

Some high performance EFI setups use a second set of injectors under
high load, so maybe primary injectors are OK, and secondarys are
noisy.

>What device or other cause might do this? I'd like some help before
>trial and error decoupling whatever I find under the hood <g>)

Ideas I'd try:

First Make sure your barking up the correct tree: Put a short (or
dummy load) on antenna jack, Ground the rig solidly, and make sure
noise stops. If not, then noise is conducted, not radiated.

If it is radiated, Get some 100% (or as close as you can get...not
RS!) shielded RG-58, (actually anything is OK) and make a sniffer on
the end....maybe 1" diameter loop, or a 1/2" long whip. Duct tape

sniffer in various places and see where you get the strongest noise. Unless you have access to a dynamometer, you will still have to do some trial and error, but at least no soldering/splicing. Try various places under hood, and also near anything electronic which is mounted elsewhere. Make a sketch outline of car, and write S meter readings at each point where probe was...follow any "slope" of increasing readings to it's peak.

EFI computer is normally inside passenger compartment, and well hidden under dash or behind trim panel...make sure you don't overlook it!

If the short whip seems to detect RF everywhere, then try the little loop instead.

Finally, do what very few mechanics I have paid do: If you suspect a cause, go down the list of symtoms and see if you can find a likely mechanism by which the suspect part could cause each symptom (load dependant, constant rushing noise, etc.). Write these down. Then consider somthing else that might cause it., and do the same exercise. When you run out of all ideas, then look at 3 or 4 most likely candiates, and see if you can think of a test or measurement which will narrow the chase. Only then should you start "fixing" it.

Too often, only the "main" symtom is considered, and parts "fixed" , when there is clear evidence that the trouble lies elsewhere.

The `Good Times' virus hoax was posted every which way, too. And does anyone *really* think a commercial service can take an internationally allocated band as heavily used as 2m or 70cm? What a prize that would be - a band complete with half a million angry, motivated jammers; many of them technically proficient and/or with mobile equipment. That would be commercial suicide, don't you think?

yours for cooler heads,

doesn't
>have is ANY filtering. I put it on the spectrum analyzer, and it is a very
>nice comb generator, with spurs every 12 MHz (including the aircraft band
>and FM broadcast band) These spurs (as well as the 2nd harmonic) are at
>most 5-10 dB down from the fundamental.

Mike, I also looked at this kit in the catalog, you know what? there is no
mention of filters. So what's the bitch? It is not as if they promised you
filters and you didn't get them.
>
>I called Ramsey, and their only response was "Look in the ARRL handbook and
>add a filter"; they will not take it back even though, if assembled
correctly
>as per their instructions, it is *not* legal to use.

Again I find this is exactly opposite whit every contact I have had with
Ransey. They have always been polite and very helpful. They offer
suggestions to try as in modifing the kits I have purchased. My guess is
that from the attitude you display here that you came across the same way to
them and no wonder you got what you did. Try being reasonable.

Another thing, just what did you expect for what they were charging for this
kit. Sounds like you want top of the line for little or nothing.

>On the other hand, I am just finishing up the Ten Tec 2M kit; that's one
very
>nice kit, and I would recommend Ten Tec kits to anyone who wants to get
into
>kit building...

How much more was the TenTec kit? Might there be a correlation?

I had the pleasure of interfacing some voice encryption units to a pair of TAD M8 radios about
5 or 6 years ago. They sure were a solidly built radio! I was very impressed with them.

Unfortunately, I cannot help you on the mic pinout, but I DO remember the radio! TAD was based
in Washington state if I am not mistaken. Do they still exist?

> Why not Type-Accept VHF/UHF+ ham tranceivers??

Type acceptance of commercially-manufactured VHF/UHF gear would
only raise the price. What the F.C.C. should have done years ago
was to A) require that it be impossible to expand the frequency
coverage of such equipment without replacement of permanently-
installed components, and B) prohibit the sale of transmitting
equipment to any person who doesn't possess a license for which
the equipment is applicable.

Wait till the commercial guys actually realize what they need
to do to convince the FCC they should have these frequencies.
Relatively speaking, it would be cheap and simple for them to
set aside a few hundred KHz and set up local, emergency services,
as well as educational communications channels. What reason will
we have for holding those bands then?

>Better start practicing for a general class license.

And maybe build some gear for 50 GHz and up. ;)

> <Letter to 73 Mag explaining cancellation of subscription in part due to pseudoscience and other weirdness deleted>

I too subscribe to 73 Magazine. But this latest issue has what must be the strangest editorial yet. I cannot understand why Wayne Green believes so strongly that the manned Moon landings were faked after reading that one book.

Some/all the Manned moon landings left two types of instrument on the surface that can possibly invalidate this belief:

- the ALSEPS packages. These were shut down from the ground in 1978, but surely there are many Hams who intercepted signals from these packages before the shutdown.

- the retroreflectors. These are in use today, from McDonald Observatory in Texas, among other places, to measure the distance of the Moon from the Earth using lasers. Without the retroreflectors, this would not be possible (do the math - it's pretty clear that it wouldn't work without them).

In addition, I believe that some Hams from the Apollo era actually intercepted communications from the spacecraft themselves. Such transmissions from spacecraft traversing cis-lunar space would be very hard to fake. Surely someone on Usenet actually picked up signals from an Apollo spacecraft or ALSEPS package - please speak up if so!

I suppose it is possible to say the aforementioned packages were left on the moon by unmanned missions and spacecraft communications were merely from unmanned vehicles, or that anyone claiming to have picked up signals or bounced a laser beam off the reflectors is part of a great conspiracy. However, if Occam's Razor is applied, it becomes apparent that the simplest explanation is not the one postulated by Mr. Green.

Besides, how often is the government that successful in keeping any secrets, let alone such a secret in which so many people would have to have been involved?

Cheers,

Chris.

2224. FCC TX manufacture regulation

Newsgroup: rec.radio.amateur.misc

> 73,
> Tony Stalls, K4KYO

This is encouraging. If there was a serious attempt to regulate the manufacture of radios, wouldn't home brew TX's require some sort of certification - thus making it far less attractive to make one's own?

I am not (yet) a Ham, but I am studying at the moment for the tests (with CW, btw). For me, the big appeal is making my own equipment. If I could not make my own TX (or have to go through some sort of FCC equipment certification - which for RFI testing currently costs about $500), then I would lose interest very quickly.

Peter,

The last 73 I purchased was, I believe, the February 1996 edition.
I had noticed a rapid decrease in the general quality of
content and production of the magazine, starting some time in mid-95
(atleast that's when I started to take notice).

Besides the quality issue, I honestly think I've read all I can
about how Wayne was hand picked by someone in New Hampshire to fix
everything that was wrong with state, about cold fusion, about
selling ragtime cd's, about how lazy and stupid I am, yada yada yada.

I USED to enjoy the magazine (about 5 years ago) and have been
buying fewer and fewer copies each year. I find that more space
is being used to discuss more and more non-Ham related topics
in Wayne's "Never say die" editorials. I'm sure the guy is smart &
obviously wealthy; however, I personally think he's losing his
tenuous grip on reality. He even talks about this in one of his
columns when he's telling us about wacky stuff that shoudn't work
but does...

I guess I finally decided that 73 & Wayne weren't what I thought they were
sometime during the summer of 1994, when I logged onto the 73 BBS
to browse. I was somewhat dissapointed that such a cutting edge
fellow was running a measly 2400 baud modem on his board. I left
a message asking why the "company" couldn't invest 150 bucks and get
a faster modem and was told that it was too great an expense. Ouch.
Can anyone spell cheapskate? Over the last 10 years I've read where
Wanye has said he'd willingly lose money on 73/Radio Fun/whatever
if he thought it was helping the ham community (even a tiny portion
of the ham community). Well, he blew that when he said he
couldn't afford to by a 14.4 modem for his 73 BBS. It showed me
that he was just too cheap & unconcerned about his "readers."

I was also a dissapointed with his whole attitude towards on-line
activities and his general disdain for the INTERNET & E-Mail. I think
that in 1996, if you haven't established a "web page" for your
magazine/company, you are doing yourself a great disservice. I wonder
if Wayne even knows what one is? He used to be such a great technological
pioneer... as long as there is a profit involved, I'd guess. Just imagine
the number of hams that have access to the Internet...

I also took the time to write Wayne a letter in February/March describing why
I wasn't purchasing 73 anymore and I'm sure it found its way right
into the round file where it belonged. On that happy note...

73 Andy KC6NMD

Bull shampoo... Reminds me of engineers' talk: Nuclear power is safe.
Three Mile Island ... Tchernobyl ... just a few examples of how precisely
worst case scenarios can be projected. Twice as bad as a nuclear war, and
your transmitters still work? Humm, seems you skipped some basics of
electromagnetic theory....

If one wants to beep, why not use CW?

Glenn Sparks <gsparks@ix.netcom.com> wrote:
>Did anyone notice that nobody has been able to tell the original poster
>how to add the roger beep?

Hi Glenn, Please note there is a difference between "hasn't been able
to" and "don't want to." Beeps and echo boxes really serve no purpose.

>All these highly technical folks, and all

It has nothing to do with technicians or being technical. Those items
serve no useful purpose.

>I do not know how to add the roger beep, I have seen ads for adding
>them, but I would suggest the poster try the rec.radio.cb conference to
>get the technical information.

If the original poster is a ham, then I find it a shame he can't look at
the schematic of his xmtr and attach such a device on his own.

>I still talk to a lot of hams on HF and VHF that say "over" at the end of
>every statement.

We do that on HF CW; I've never heard a CW QSO where "over" (i.e., "K")
wasn't used at the end of each and every transmission. Do you feel
there is something wrong with that?

Hi Ed, It's not really hams vs. cb'ers but rather law-abiders vs.
criminals (breaking federal radio regulations makes one a criminal).
You don't really condone someone running unlawful power and operating
out-of-band, do you?

73 from Hawaii,

SB DX ARL ARLD027
ARLD027 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

BOUVET ISLAND, 3Y. At the Dayton HamVention, Luis, XE1L, reported that the South Sandwich Island DX Group, SSIDXG, are planning a full scale DXpedition for sometime in December 1997/January 1998.

LIBYA, 5A. 5A1A operations by Ukrainians and Libyan nationals have been approved for DXCC.

MALTA, 9H. Felix, DL8OBC, and Matthias, DL4OCL, will return to the Island of Gozo July 22 to August 9 and use the calls 9H3UD and 9H3UF. They will be on 80 to 10 meter CW and SSB. Some teleprinter and satellite operations might take place. QSL 9H3UD via DL8OBC, QSL 9H3UF via DL4OCL.

TAIWAN, BV. BO1/JP1RIW will be on the air from Ma-Tsu Islands, IOTA AS-113, May 31 to June 2. QSL via BV2KI.

PACIFIC DXPEDITION. Yuu, JA3IG, will activate two different islands over the next few weeks. Listen for A35IG until June 1 from Tonga, ZK2YY June 1 to 4 from Niue, and A35IG again June 5 and 6 from Tonga. Yuu operates mostly 40 and 20 meter CW. Try 7005 and 14025 kHz.

GREENLAND, OX. Attention 6 meter ops. Peter, OX3XR, is active on 50.110 MHz running 60 watts to a Yagi. He is located in Nuuk, grid square GP44dd.

DODECANESE, SV5. Manfred, DL8SET, will sign SV5/DL8SET from Rhodes June 6 to 20 on both HF and 6 meters. QSL direct or via the bureau to DL8SET.

SOUTHERN COOK ISLANDS, ZK1. Bruce, AA8U, Stan, K8MJZ, and Marilyn, AG8W, will be active from Rarotonga July 11 to 21. They will sign ZK1AAU in the IARU Contest, and ZK1MJZ and ZK1AGW outside of contest hours. QSL to AA8U.

MARION ISLAND, ZS8. A few reports indicate that Chris, ZS8IR, has been active. On May 21st, he was reported active on 3799 kHz around 1345z and 2100z. On May 18th, he was heard on 14195 kHz around 0700z. He will be there until June, 1997.

LIECHTENSTEIN, HB0. From July 14 to 27, DL1JBN, DL3JSW and DK5YY will be active on HF, while DG0JAG, DG0JS and DG0OKA will do VHF and satellites. VHF and satellites will be the main effort the first week with concentration on HF the second week.

MONACO, 3A. Ralf, DL3JSW, of the HB0 team mentioned earlier, will travel here July 14, and will try to obtain licenses for both 3A and Seborga.

BAHAMAS, C6. Robert, K4MQG, William, AA4R, and Ted, WA4VCC, will be on Grand Bahama Island June 7 to 14, and active on 6 and 2 meters, 70 cm and HF. Their station, with antennas atop a 3-story building located on the ocean shore, will be very active during the ARRL VHF Contest June 8, 9 and 10. Their grid square, FL06, has not been up on VHF for sometime.

Isn't that a bit ... illegal? The radios are specifically made
to transmit on certain frequencies, and should be left that way.
There's no need for people to go rampaging about on police
frequencies. :)

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

In article <4oksc5$c03@newsstand.cit.cornell.edu> cjs9@cornell.edu (Carl Steckler) writes:
-In article <n1istDs68Gx.5E5@netcom.com>, n1ist@netcom.com says...
->I picked up the FM-6 "Crystal Control Micro Size FM Transmitter Kit",
->hoping to use it as a Fox transmitter.
->
->This is a surface-mount kit with a varactor-tuned crystal oscillator around
->12 MHz followed by a quadrupler and a tripler to get to 2M. What it doesn't
->have is ANY filtering.
-Mike, I also looked at this kit in the catalog, you know what? there is no
-mention of filters. So what's the bitch? It is not as if they promised you
-filters and you didn't get them.

The ad doesn't mention any other part of the circuit either... What I
expected was a kit that, when built according to their instructions,
would be legal to use. This kit does NOT meet FCC harmonics requirements,
and transmits on frequencies that ARE NOT licensed for this purpose (FM
broadcast band, aircraft band, etc.) while also transmitting on the intended
frequency. The filter should have been included as part of a decent (or
just legal) design.

-They offer suggestions to try as in modifing the kits I have purchased.

Why should I have to modify a kit to get it to perform as described?

-Another thing, just what did you expect for what they were charging for this
-kit. Sounds like you want top of the line for little or nothing.

No, I just wanted a 2M transmitter without the hassle of designing one
myself. There is no reason that they couldn't have added filtering at
that price...

->On the other hand, I am just finishing up the Ten Tec 2M kit;
-How much more was the TenTec kit? Might there be a correlation?

Apples and oranges here... The Ten Tec kit is a full 2M transceiver,
and is priced comparably to the Ramsey FTX-146 (which, according to the
QST review, is also a kit of questionable performance and legality...)
On features, the Ten Tec 1220 beats the FTX-146 hands-down; it has a
full front panel, CTCSS, mike and mobile bracket, and place for an
internal 35W amp for about $20 more than the Ramsey.

>or withg a rope on it as a boat anchor.

A "boatanchor" in this instance is a rig manufactured from the 1930' s
through, say, the 1960's. An example would be a Johnson Valiant, a
Collins 32V-1, a Hammurland HQ150, etc.

>But if that is true, why spend a news group on it?

Many hams (and non-hams) are very much interested in the acquisition,
restoration, and operation of this vintage equipment. Radios that
"Glow in the Dark" , weigh about a 100 lbs. or so, and that very well
could be used as a "boatanchor," are the passion of many of us.

Sort of like 1957 Chevrolets, MacIntosh stereos, and vintage Leica
cameras are to some.

>I don't like to see again those posts about my rig is better than yours;
>yours is dog s??t; toss it overboard ("boatanchor"). Whit this kind of
>postings we all can do without.

I don't see how this relates to the discussion. Maybe I missed some
postings.

I am personally in favor of the name for the group being
"rec.radio.amateur.boatanchors." I don't understand what the problem
is; of course, I am well versed with the usage of the term
"boatanchors" since I have many of them myself and am a contributor to
Electric Radio. However, I also have modern "state-of-the-art"
equipment and am not interested in getting into a big fight over the
name to be used for the group.

Let's just vote on it and get on with it. I am looking forward to the
group, irregardless of its name.

2243. Re: I support the LEO and the loss of ham frequencies.

>would be unaffected as they are either dead, should be dead, or
>inactive.

Gosh! Who licked the red off your candy? But then again, I rather doubt that hams will have the spectrum we do now in the next hundred years or so. "Traffic" as we know it now will not be needed; "important" conversations are probably best left to another mode anyway, and "contests".....

I guess we better enjoy it while we have it, because I think it will be a thing of the past in the foreseeable future. Maybe not in my lifetime (I hope not), but the eventual loss of spectrum is a certainty. I would hate to see the reaction of Congress if someone played a tape of the goings-on that occur on portions of 75, 20, and 2 meters.

73, and hope for the best. But prepare for the worst.

2244. Numbers stations.....what are they?

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-30 00:00:00 UTC
From: Neil Soane <nsoane@pavilion.co.uk>
Message-ID: <31AE350C.2200@pavilion.co.uk>
Source record: 224282

Does anyone have any thoughts on what are known as 'Numbers stations'? No-one seems to know where they are transmitted from and the fact that they are sent on unscrambled voice channels and in areas of the HF spectrum that are easily listened to, leads me to believe that they are not intended for subversive operations. What are they used for? Who would need such a simple code such as "Sierra Yankee Oscar two" or such like?

I can hear loads of these stations in the UK and most of them are transmitted on the standard AM bands with some on USB.

They come and go, they may transmit for an hour or so and then are gone, also they definitly pre-recorded or computer generated and are mostly in English, although I have heard some in German and Slovak languages.

The other anomaly is the single letter CW stations, these are the stations that continually send just a single letter of morse day in day out. The frequency never changes and nor does the letter. Any thoughts?

I am sure that many people have asked this question and I would like to hear the thoughts from some of the knowlegable people on here.

Please either mail directly to me or onto the newsgroup, I think it would be interesting to see what people think.

Regards,

Neil

2245. HF oscillator

I am building a scanner (on low budget) and for
that I need a oscillator. By software I must be
able to choose between a number of different
frequences starting at 100MHz, 200MHz, 300MHz....
Ten different oscillators is a possibility but too
expensive. I have thought of something with a
cap.diode.
Maybe some of you has a good construction or some
good ideas.

Thanx.

I just received the following URGENT e-mail bulletin from Bill Burden (WB1BRE) ARRL New England Division Director and Warren Rothberg (WB1HBB) New England Vice-Director.

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT (LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS LIST INCLUDES 144-148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ (THE CURRENT AMATEUR 70 CM BAND)!

IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF BANDS!

QST has just finished their July editorial, and it deals exclusively with this latest threat. The editorial was e-mailed to me with the bulletin. I know some of you may have already seen it, but for those of you that haven't, I have excerpts of it at my web site. Plus, I have written some copy for those who would like to join in the letter writing campaign to stop this distructve proposal. The information is provided to help those of you (including myself) who have some difficulty getting your throught on paper. Feel free to use what you like, and if you would like to add some additional letter writing copy, just e-mail it to me and I will add it to the web page. My URL is http://www.sarrio.com 73's, Ray WB6SIV

>There is a book on the best seller list about German hams
>from WWII.

>If you read the book you will know why I avoid German hams.

Burt (K1OIK),

since the day when I was born, 6 years after the WWII, approx. every week,
I am hearing or reading that I am a bad guy because I am born in Germany.

Anyway, I have learned to deal with it. Because I have been in many countries
all over this world on all continents for many times I have learned that it
is very important to meet people and to see the human behind a person and
not his nationality or his race!

Today we are living in the year 1996 and the WWII is about more than 50 years
history. Since 1945 many things have changed here in Germany. Do you have
been in Germany during the last past 20 years? What do you realy know about
Germany and The Germans?

I am not in the position to give you any advice, but maybe you should open
your mind .. just a little bit ..?

: This is a survey to determine the average time it takes one
: to learn 13wpm CW. I've heard people claim 2 weeks to 2 years.
:
: Took me one year.
It took me about 6 months, I think, after passing my 5 wpm novice
test. I had just missed the FCC examiner and had to wait for him to
come around again to Nashville,TN. I could copy solid 18 wpm by the
time I had the opportunity to take my general test. I could not take
a Extra class exam because I did not have a general class license.
Then , 1962-63, you had to have an general or advanced license for
2 years and general class licensed hams had the same privileges as
extra and the call signs were the same as well.

Well, one *GOOD* thing we've done is to populate these bands. We have a
fighting chance to save these, thanks to the no-code tech.

Remember the failure of "Novice enhancement"? And the subsequent loss of
220-222 mhz when it didn't work? At least we didn't make that mistake twice.

At this point I rely on an old family friend Jim W8BU, who copied messages from the sinking Titanic and participated in the Transatlantic tests. He says the term "DX" came from _D_istant _X_mtr or _X_mission. There was nothing in there at all about weak or foreign signals. Jim also reminds me that 1 watt into a good antenna will far outperform a full gallon into a dummy load - antennas are still the key to good signal strength.

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could
lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this

information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."

Here's what's happening, and what you can do about it.

The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."

Hold that thought while we shift gears to the substance of the issue.

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time. We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.
Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember

that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

Write now. Right now! -- David Sumner, K1ZZ

Several years ago (late '80s or early '90s)I recall reading an article in QST or possibly CQ Magazine on building an antenna made from copper pipe. In the construction article it described a process of bathing and rinsing the copper that first turned it green, then returned it to a flat finish that would not corrode in the weather.

I now find myself in need of the process, but unable to locate the article. Does anyone know the process or preferably have a reference to the article?

Thanks,
Harold - N4FLZ

Hopefully you will shoot for more than just a tech license. I would get an older transceiver such as an IC730 ($300 to $400) or TS140, or FT747 ($400)..one of the best is the older Ten-Tec Triton IV (540) these go as low as $200 + power supply. We use old Drake Lines (R4A/B, T4X) for new hams in Metro Atlanta, too.

Go to a hamfest with a friend who knows or buy one used from Amateur Electronic Supply (more expensive but you can take it back).

Do this for 5WPM CW (13too) before you get a 2 meter FM transceiver. Mobile or hand held.

Good luck,

Dave Thompson K4JRB

Did anyone notice that nobody has been able to tell the original poster how to add the roger beep? All these highly technical folks, and all the original poster gets is stupid remarks with no information he can use. I personally do not mind the roger beep, especially on DX, so many times others are trying to call the station it is difficult to tell when the other station has ended his transmission. On the other hand all the guys trying to break into the QSO, had roger beeps also it would be very annoying.

I do not know how to add the roger beep, I have seen ads for adding them, but I would suggest the poster try the rec.radio.cb conference to get the technical information.

A nice note saying that roger beeps are considered not the best operating practice for normal contacts would have been very helpful. I still talk to a lot of hams on HF and VHF that say "over" at the end of every statement.

: Eric,

: If this is medically diagnosed you are entitled to a waiver. The waver
: system was put in place to comply with the Americans with Disabilities
: Act. The fact that this tortures the folks I affectionatly refer to as
: "Code Nazis" is just a pleasant coincidence, not part of an evil plot.
: Any MD or DO can sign off on the back of the 610 and then you have a
: year to pass the written tests for as high as you care to go. This
: assumes you have passed the 5 WPM required by international agreement.

: There are a number of jerks who will take issue with the system but
: since it is based in law they can suck eggs. I imagine that they are
: the same people who park in handicaped parking places and made fun of
: the kid with the lisp in school. pay no more attention to them than you
: would to pond scum.

I'm aware of the waiver program but I've seen so much condemnation of
people using this program that I'm not willing to use it even though
I'm entitled (on 2 counts).

a few months ago there was a letter published in QST where some ham
was whinging about how someone came in to an exame with a medical
waiver based on a neurological condition. When the person passed the
theory tests without any problem, this ham assumed the medical waiver
was fraudulent.

This letter was very telling to me on a couple of levels. First, it
showed the complaining ham had a basic lack of understanding of brain
functionality(*) and compassion. Second, by publishing the letter, the
ARRL also demonstrated a significant lack of understanding and a
willingness to propagate suspicion of anyone with a handicap
especially an invisible one. At the very least, they should have
provided editorial commentary about how not all handicaps are visible

and that it's not appropriate for a VEC to exhibit any prejudices

--- eric

* the assumption the ham seem to be making was that if one the cognitive capabilities sufficient to pass an theory test, then they should have the capability to pass a CW test. In reality, the theory test exercises long term memory and higher level cognitive functions. Since the test is untimed, people with attention or focus problems (like ADD) aren't penalized. They just take longer.

The CW test exercises the ability to multitask (writing at the same time as listening and comprehending), sustain attention, and not much in the way of higher level cognitive skills. Brains with ADD and related neurological problems don't have very good wiring for this kind of task.

Hi everybody,

In a few weeks time we will travel to the US (already got my licence) and I plan to operate HF from the rental car. I plan to use a TS-50 and outbacker perth on the booth of the car. The rental car will probably be an Oldsmobile Cutlass Cierra and I wonder if there are any known problems with using a 100W HF tranceiver in this car (It'll have Cruise control and ABS on it). I wouldn't like the car to stall on the highway just because I push the PTT :-)

BTW, it might be a Buick Sabre instead of an Olds.

Any comments??
Thanks in advance.

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

> Jose KD1SB

Thanks, Jose! There's the first bit of common sense in this thread
discussed in a positive manner. For years, amateurs have been seen by many
as egotistical about their craft in comparison to citizens band radio
enthusiasts ("the unlicensed scum that they are" -- or so many amateurs
would say). A lot of people in this discussion already have shown their
"snootiness." Thanks for not being that way.

It's about time that someone stuck up for both uses of the PUBLIC (read:
not amateur-owned or ham-regulated) airwaves. Best to regognize that
amateurs frequently come from the CB ranks. Let's support a variety of
uses of the airwaves and not just look out for our own.

True, CB should have been up (UHF) there all along.

Ed -a RADIO enthusiast.

2266. TenTec 6M Kit Issue

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-30 00:00:00 UTC
From: levine@mc.com
Message-ID: <4okba4$4pj@newsy.mc.com>
Source record: 224341

While at Dayton, I visited the TenTec booth and checked out their
6m kit. This kit provides 8 (I think, maybe 5?) watts FM and they
claim it is illegal for them to sell a higher power version like
the 2m kit. The 2m kit has an optional final stage to provide 35W.
They quoted me some FCC law prohibiting amplifiers for low power
6 meter gear. Even their literature mentions this "law".

MFJ sells a 10w 6m ssb/cw rig that provides 10w and in their ad for
this piece, they specifically reccomend usin the Mirage 10W-->150W
amp (A-1015-G) or the Mirage 10W-->350W amp (A-1035-G) if you want
more power.

The folks at the TenTec booth told me that they don't know how Mirage
can get away with violating this law. The TenTec folks told me that
since amps in this freq range (50mhz) can be used on 11m it was illegal
to sell.

I must admit having no experience with 6m but am now thinking of trying
this band becuase of the challenge. Can anyone shed some light on this
issue?

Bob

It must have happened in some small Kentucky town (perhaps like an Eastern Kentucky town I used to live in) where one would be pulled over if you had an out-of-county license plate and a CB antenna on your car. (You must have been up to something illegal... bootlegging... etc.) Sometimes our little town cops get so hungry for action they're overzealous.

Having been a news reporter in Kentucky (exempted by law from prosecution in such matters) I carried with me at all times a copy of the attorney general's opinion exempting news reporters, so that I could argue the law right then and there if stopped. Never had to use it.

The message states that 2 meters and 70 cm are included on the list. Has anyone seen the entire list of frequencies that have been suggested?

I wonder if the LEO industry guys actually lust for one of the other bands, but have included amatuer bands in order to help their cause in some way. Perhaps if they had amatuer operators arguing that one of the other frequency bands should be used, it would lend them some support for acquiring it. Could this be their tactic?

About 10 minutes...actually it took me almost 9 years to get motivated
to upgrade from OLD-TECH to ADVANCED, and I did it in one evening's time
at a VE session. 10 minutes for the Element 1b, almost didnt make it..I
had just 6/10 on the questions (all fill-in, not multiple choice!) BUT
I did have close to 3 minutes of PERFECT copy. So..I passed. Then the
VE said:"Psst! Wanna take your 4a tonite too? No extra charge." Passed
it with a 100%!

Actual time spent studying for the 13WPM? About 5 weeks, using the W5YI
Morse Academy program on my PC and some on the air practice and QSOs.

The ADVANCED written was much easier!

Digging out and dusting off my copy of Part 97, I find the discussion and standards for type acceptance of external amplifiers in paragraphs 97.315 and 97.317. The folks at TenTec are definitely working from a misunderstanding of what the FCC rules actually say and require. Nothing in these sections would prohibit TenTec from providing a type-accepted amplifier (or kit) as you requested, just as Mirage and TPL do today.

The amplifier must be basically incapable of operation from 24 to 35 MHz, as defined in 97.317b, and the filter components will increase the production cost. TenTec may feel that this places them at an economic disadvantage, but if the input and output striplines are designed correctly, they could have a completely acceptable unit suitable for commercial sales (in assembled form only). Realize too that the TPL units are actually type-accepted as a Part 90 product, carry a commercial price tag. They JUST HAPPEN to work in the adjacent 6M amateur band quite well, but they work not at all below 35 MHz, exactly as the FCC requires!!

Wayne's tenuous grip on reality?!? What?? When?? Who?? WAYNE? WAYNE GREEN?
Nahhhh, you're kidding! Can't be!

Wayne lost his grip on reality many, many years ago. If you don't believe me, read over the transcripts of his testimony in his divorce and tax proceedings. Total fantasy. As is most of the braggadoccio in his numerous and rambling editorials, going back to when he was the editor of CQ. Good grief!

For even more of an education, you should read the book "Run, Wayne, Run" written about his ill-fated run for the Vice Presidency of the United States. (Yes, heaven forbid, THESE United States!) THe book discusses some of his better lies, er, uh, stories, speeches, and sandbagging.

Yes, indeed, Wayne Green was quite a character long before our friend Peter up top here noticed a degradation in the quality of "73".

73 (ouch, it almost hurts me to say it),

That is a pretty good way to do it. However, there is another way. Send e-mail to
unused@fido261.qis.net
and the gateway will send you a complete list of unused 1X2 and 2X1 calls as an e-mail message.

WINDTRAX VII FLIGHT IS SATURDAY!!!

June 1, 1996 at approximately 1200 UTC (start checking about 6am Indiana time),

Launch site: 2.5miles east of Whiteland, Indiana (south of Indy about 10 miles)

Prelaunch Freqs: Check-ins: 3.871MHz, & 146.835/R locals
Nets begin at 1130UTC

Balloon Type: Kaymont 1200 Gr.

Parachute Size: 5 foot diameter custom made by KB9BSV

Flight packages;
Crossband repeater (by Paul /W9DUU)
2m rcvr to 6m & 70cm xmtrs, with voice ID & nicad pwr pack, dual half wave antennas
GPS/Packet(By Chuck/WB9IHS)
Garmin rcvr, Paccom controlled (HandiPacket) & down-linked on TEKK 446MHz xmtr.
Self contained, nicad & lithum powered, 1/4 wave xmtr antenna, Ball Corp stripline rcvr.
Stripline antenna on top of box. Audio beeper for ground retrival of packages.
ATV(by Terry/KT9V)
Two (2) B&W CCD cams, WB8ELK color video graphics downlinked on Wyman ATV xmtr
with 1/4 wave antenna. Self contained, lithum powered. CCD cams are mounted one
shooting horz., and one up, solid state switching controlled.

Flight Package Freqs;
Crossband rptr; Dn 52.525 & 444.85 MHz (VP) 50 & 100mW output Up @ 144.3MHz (VP)

GPS/PAcket: Dn 446.0 MHZ @1200 Baud packet (VP) 250mW output.

ATV: Dn 439.25 MHz (VP) 1.5 WATTS OUT!!!

All amateurs are welcome to participate, checkin, monitor feeds, etc. Pix will be posted on the following WEBSITE:

www.surf-ici.com/marc Stop by and get a birds eye view from 95,000 feet up!

For details on the WindTrax Group and the WindTrax program, contact Chuck Crist/WB9IHS via email, mai@iquest.net

From: kenwb0qna@aol.com
Message-ID: <4ood87$lql@newsbf02.news.aol.com>
Source record: 224115

The new Icom radios have captured my interest (mainly the '738) but I can't find
the transmit mod listed anywhere. Can anyone e-mail, post or somehow direct
me to this mod? The all-HF transmit capability of my current transceiver has been a wonderful poor-man's synthesized signal generator for 12+ years and I wouldn't consider buying anything without the mod first.
Ken - WB0QNA KenWB0QNA@aol.com

2290. This Week in Amateur Radio #166 (for air through 6/7/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-31 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5hBNyL8.sanderman@delphi.com>
Source record: 224116

Here is a summary of news items covered on edition #166 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 7-Jun:
-
1. New Incursion by Commerical Interests Threatens Two Ham Bands
2. FCC's Vanity Call Sign Program is Finally a Reality
3. Federal Judge Attacks Enforcement of Communications Decency Act
4. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
5. "The RAIN Dial-up" from Chicago
6. Weekly Propagation Forecast with George Bowen, N2LQS
7. Two Young Scientists Win Numerous Awards in Satellite Research
8. Power to Mir Beefed-up with Installation of New Solar Array
9. Minnesota Ham Wins Zoning Fight with Golf Course
10. New US Senator Has Ham Connection
11. "Amateur Radio Newsline" - Edition #981 from Los Angeles
12. Special Event Station Calendar with George Bowen, N2LQS
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

One of my theories about CW is, it keeps the wantabees from buying a radio and just jumping on the bands that are crouded enough.

2300. Letter to 73 Magazine Cancelling Subscription

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-31 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4on2at$a0r@orion.aoc.nrao.edu>
Source record: 224126

As many others have said, this truly is a sad development.

The deterioration of the magazine probably will accelerate rapidly from this point. Soon after the "AIDS cure" issue hit the stands, I got a letter from 73 that (rather desperately) sought article submissions from authors. Wayne and his staff will become more desperate for articles because no author with any concern for their reputation now will allow their byline to appear in 73.

Advertisers, too, will have to consider the wisdom of having their material appear next to the pseudoscience.

I hope this does not damage the reputation of ham radio itself, at a time when we need as much respect and support as we can muster from the general public.

Dave Finley, N1IRZ

2302. * Menace a nos bandes *

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-31 00:00:00 UTC
From: belsan@odyssee.net
Message-ID: <4omvus$9m5@pegasus.odyssee.net>
Source record: 224128
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.space

visees sont celles qui sont les plus fortement congestionnees et utilisees. D'autres bandes qui auraient ete aussi bonnes au point de vue technique, et qui n'auraient pas nui a quiconque, ne sont pas comprises dans la liste. Il semble avoir un but politique ou personnel quelconque derriere ca, mais qu'importe la raison, ces propositions ne devront jamais devenir realite. C'est la premiere fois, de memoire, qu'un autre service serait propose pour la bande de 144 MHz. Faisons en sorte que ce soit la derniere.

Les deux bandes amateur visees consitituent les pierres angulaires de nos activites de service au public. Bien plus souvent qu'autrement, ce sont ces bandes qui servent le plus sur un site d'un sinistre ou d'une urgence quelconque, ou lors des activites de communications pour les evenement communautaires. La phonie, les donnees numeriques, mobile, fixe, meme la television, et la liste se prolonge, autant dans l'immediat que dans l'avenir. Quelle logique y a-t-il dans ces choix??

Meme apres que l'ARRL ait explique ces enjeux aupres des representants de l'industrie, on ne recut pas plus d'assurances que nos bandes seraient retirees. Meme qu'il fut repete que jusqu'a ce que leurs besoins soient satisfaits, toutes les bandes resteront sur la liste. Ceci n'est pas satisfaisant pour nous.

Alors, on vous appelle pour votre assistance pour defendre NOS bandes. Nous devons faire pression aupres des autorites americaines et canadiennes pour que ces propositions meurent dans l'oeuf. Nous devons faire valoir notre position avec une telle force, avec un tellement grand nombre de reponses que plus personne ne sera tente de recommencer une telle betise. Il ne faut pas attendre WRC-97 pour combattre cette menace, IL FAUT COMMENCER MAINTENANT.

Voici une liste d'adresses des gens impliques dans cette affaire, y compris celles des gens de l'industrie satellite (commercial) qui ont pris partie dans cette menace:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554,
E-MAIL: choliday@fcc.gov FAX: 202-418-0748

Warren G. Richards, President, IWG-2A, Dept. of State, CIP 2529,
Washington, DC, 20520
E-MAIL: richardswg@ms6820wpoa.us-state.gov FAX: 202-647-7407

Tracey Weisler, Representant FCC, IWG-2A, International Bureau, FCC,
Washington, DC, 20554
E-MAIL: tweisler@fcc.gov FAX: 202-418-2824

Mary Kay Williams, Final Analysis Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD, 20770 FAX 301-474-3228

Il y aurait aussi Industrie Canada, qui pourrait etre interesse. Ou votre depute federal. Envoyez-leur vos commentaires,

en autant qu'ils sont polis. Si vous etes capables de faire vos arguments d'une facon intelligente et sans recourir aux insultes et aux menaces, c'est d'autant plus efficace pour attirer l'attention. L'objectif, c'est d'eduquer et de persuader, et non d'intimider, car les faits sont de notre cote.

Les preparatifs pour WRC-97 peuvent etre consultes sur le site WWW de la conference: http://www.fcc.gov/ib/wrc97/

Ecrivez maintenant. C'est important.

From: ap0001@pacificnet.net
Message-ID: <4om3qr$fm4@news2.cais.com>
Source record: 224200

hi...

this may be the wrong place to post but here goes..

I'm not really into amateur radio but i am into computers, in fact I am involved with a project to bring a new non html based Internet browser to market.

My question here is about packet radio, I have a friend who is involved involved a little in amateur radio and he has asked me about "packet radio" computers..

In my business I tend to encounter (now) inexpensive 286 and 386 class computers and parts (some with network adapters), which are not really suitable for operating in a Windows environment, but run DOS software well..

Are these suitable for packet radio systems ?? If so and if anyone is in need of such machines, let me know..

I would also be interested in information as to what sort of peripheral hardware is required?

As I mentioned, my forte is primarily computers (I have a basic understanding of analog electronics) so I could probably assist in setting up systems..

Thanks..

Ed Manges

> I doubt that you would ...

How an I uninformed. Germans killed Jews, Germans sent poison gas to Iraq,
Germans started both World Wars. This activity is not restricted to Germans
but they are pretty good at it.

Of course mant Germans are caring decent people but there is a trait
that causes them to think they are the superior race.

Clearly almost anyone can better use ham frequencies than hams can.
Have you listened to the important conversations plus contests
and useless traffic on ham bands. If the FCC wiped out ham radio
today 99% of the public would be unaffected. Even most hams
would be unaffected as they are either dead, should be dead, or
inactive.

I think I will write my congressIT.

After reading the recent postings about the subject, I still don't know for sure what the term "boatanchors" means.

My association with this word I think of out dated, not properly working equipment, that are only good enough to be used as ballast or dead weight or withg a rope on it as a boat anchor.

But if that is true, why spend a news group on it?

I don't like to see again those posts about my rig is better than yours; yours is dog s??t; toss it overboard ("boatanchor"). Whit this kind of postings we all can do without.

I started working him on CW (and voice.. SSB, we being "outre" for those times) ... Not only was he F A S T .. he was very good. I was jealous and that spurred me on. Thanx to Gary, I got my code up to 18 wpm + 5 months after acheiving my novice ham license, and 2 months after getting my conditional .. that being old time license that Gary and I held back then, which meant we were over 200 miles from the FCC testing sight in San Francisco and could take our license from the "VE" of those times, a fellow ham holding the proper license class .....now have held Extra for 20 years ////....

That darn CW has become a part of my life, and I enjoy it much like others like typing messages .. and I am proud of my being able to operate at 40+ wpm -- well, + / - -- for hours during a CW contest ... or while on a DXpedition.
Thanx, Gary ... and all the other ELMERS that spurred me on! `preciate!

73 to all ... Mark -- AA6DX

Are these folks allowed the privilege of driving? It seems to me that that they would be endangering others on the highway if they were to carry on a conversation and drive at the same time. Code should be the least of their worries. Even walking while talking might prove dangerous to themselves.

Hi,
It took me about 200 hrs of listening to code tapes. It took my son who was 11 at that time, 5 (five) hours. He never listened to a code tape. He 'did code' an hour a week at the class that our local club puts on. He had a much tougher time with the theory because he had little to equate the analogies to.
It took me about 50 hrs to get to 20 WPM. I was 30 years older than when I did the 13 WPM but, I didn't feel any pressure to do it. I just thought it might be fun to try, and it turned out to be just that. I can take or leave code. Whatever works, however cw will get through a heck of a lot of QRM. Thinking of QRM, we need a Q signal for net made noise. QRW? W for whining.

Jim

Take a look at Part 97 -- it spells out that an *external* amplifier of that sort must be type accepted, and must meet certain standards preventing it from being easily used in a certain band surrounding CB (unfortunately including 10m). I don't see how this would apply to a module designed to go inside the transceiver, though.

What:
HAMFEST - COMPUTER SHOW - ELECTRONICS FLEA MARKET

When:
June 16, 1996

Time:
8AM - 1PM

Where:
Nordonia High School, Macedonia, Ohio (Just south of Cleveland)

Join the Cuyahoga Amateur Radio Society at its 5th annual Hamfest!

This years Grand Prize:
- An Icom 2350H Dual Band Mobile!

And don't miss out on these door prizes:
- An Icom 2GXAT 2m Handheld!
- A 28.8K External Modem!
- A Handheld Scanner!

Tickets are $3.00 in advance. ($4.00 at the door.)

Inside Vendor Spaces are $11.00 each and include one admission ticket.
Additional spaces are available for $8.00. (Inside vendor setup will be on
Saturday night 6pm-9pm and Sunday morning at 6am.)

Outdoor Vendor Spaces are $4.00 each.

For reservations or info, call Rich James, N8FIL at 1-800-404-2282, visit

1) Naturally.

A) True, if it were built in at the design stage, like the Radio Shack HTX-202 HT. Probably the most FAQ about that transceiver is how to modify it for out-of-band *receive* which I understand is not possible. But, since the Japanese manufacturers design for a world market, would it be as simple as the various models of VHF/UHF transceivers, depending on the country of import? I'm no engineer, but I would theorize that opening up a 2-meter rig for 144-148 MHz operation, when it was intended for a 2-MHz segment of that band, may be as simple as including/snipping a diode.

B) This is a good argument on paper but, followed to an extreme, my wife would not have been able to have bought the HTX-202 for my birthday last year.

Good thoughts, though.

From: 72527.01012@compuserve.com
Message-ID: <4on5s5$bl@dub-news-svc-6.compuserve.com>
Source record: 224222

Hi Guys!

Here is a copy of a disturbing ARRL bulletin I received the other day.
Please read it and act if you will!

73 de WA3RVT, Steve

ARRL Bulletin follows:

Subject: URGENT ARRL NEDIV BULLETIN

*****ARRL NEW ENGLAND DIVISION SPECIAL BULLETIN 96-9A*****

QST to all Amateurs

May, 1996

Strafford, VT

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could
lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.
In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."
Hold that thought while we shift gears to the substance of the issue.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.
Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.

Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.

Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97

home page at: http://www.fcc.gov/ib/wrc97/.

I have had three MFJ tuners. In general, I have been extremely happy with them with one exception. Their roller inductor tuners are pretty crappy. The roller inductor is hard to turn. The tuner that I used with this was the Differential T tuner. The counter was also driven by a belt instead of a chain which can lead to inaccurate readings due to slippage.

Anyway, the two with tapped/swithched inductors have worked like a charm. I have also been using it with an Ameritron 811A and it works well with that also.

In Belgium (not part of the former USSR) we are NOT allowed to listen to police, fire dept..... We can't even own a radio capable of receiving these frequencies. The law here states clearly that we can only listen to broadcaststations and amateurbands. If you take this very strictly then it's even illegal to listen (or monitor) pressagency RTTY, weathersatellites...
The last few years scanners came into the belgian market thatr were type approved because their coverage was modified from 25-1200 Mhz to 88-108, 144-146 and 430-440 Mhz (just BC and Ham).
The funny part is that a Belgian citizen living just meters inside the Belgian border cannot listen to the police but his Dutch neighbour living a few meters accross the border can do so completely legal! Now that what I call European unity.... :-)
BTW, I think that Belgium will not be able to restict reception of radiosignal much longer because of the 'free movement of people and services' within the European Union.....

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

Hi Robert, Why not subscribe to the Boatanchors newsgroup for a few days to see exactly why such a list should be turned into a newsgroup? All your questions will be answered and you'll walk away from the experience with a new understanding.

To sub, send an email to listproc@theporch.com and only write:
subscribe boatanchors <your name here>
and you'll be hooked up. The list owner requires a subscription fee of $12/yr but I believe there is a free trial period.

73 from Hawaii,
Jeff KH2PZ/KH6

P.S. Make sure you keep the FAQ that will be sent to you so you'll know how to unsubscribe.

>Here's another point - WHO would you sell your equipment to?

That's part of the arguement for dismissing this frequency grab,
alright. If there's no 70cm (for example) band, then all your 70cm
gear is now worthless. That's expropriation in my book, and you can
demand compensation. Anyone care to guess how much that might total?
Talk about a class-action suit waiting to happen :).

I've *got* to think this whole deal is an exercise in political horse
trading - the commercial guys have no hope in hell of taking the 2m
and/or 70cm bands, but hope to use this `loss' as a bargaining chip to
gouge someone else. If they need spectrum, how about a few of the
65-odd broadcast TV channels @ 4 MHz apiece? It's not like the
networks have the clout they once did; broadcast TV isn't the
moneyspinner it once was.

The third thing that occurs is that nobody has mentioned what the
proposed LEO modulation scheme is to be. If we're talking spread
spectrum techniques with a high chipping rate and long codes, nobody
will ever know they're there and we'll be able to share the bands
painlessly. Naturally the CW-only-and-forever crowd (hi guys, you
know who you are :) would never think of that since they're sure
progress in the radio art stopped in 1935.

regards,
Ross ve6pdq

>What did I miss here? I must have one or more facts wrong....

Only the fact that some of the Police in Kentucky are about as intelligent
as transmission fluid! Usually this has a great deal to do with the fact
that they can't attract and keep good cops on the small salaries that most
of the towns can afford to pay.

Not to worry, EVENTUALLY this matter will escalate to a State Court level,
and then heads will roll! The Kentucky State Court system has developed a
very short fuse regarding the 'good-ole-boys' local police systems and have
been working overtime to help their state shed it's former image regarding
these sorts of problems. Yep...Boss Hogg is on the run!

In places where the lawman's salary was determined to be a percentage of the
fines collected, Kentucky and 4 other states have outlawed the practice, in
light of the abuses, especially against out of state tourists! Good to know.

Hi gang:

I think this article speaks tongues towards what *could* happen to the 440 Mhz. band IF we don't start using the band in more states than California. If this is a sign of things to come, that little dual bander may become WORTHLESS otherwise.

As I was once told "If we SNOOZE, we LOOZE" (and right now we are on the brink of LOSING the 70 cm band if we don't start USING IT!!!)

Subject: Ham radio threat

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

AMATEURS MOBILIZE AGAINST THREAT TO 2 METERS, 70 CM

The American Radio Relay League is asking radio amateurs across the United States to help defeat a threat to the two most heavily used amateur VHF and UHF bands.

An industry working group known as IWG-2A that is preparing draft US proposals for the 1997 World Radiocommunication Conference has before it a list of "candidate bands" for low-earth orbit mobile satellites ("little LEOs") that includes, among a number of others suggested for consideration, the 144 and 420 MHz bands. Little LEOs are intended mainly to offer commercial paging and other low-data-rate messaging services.

The list of candidate bands was submitted by little LEO industry representatives at a meeting of IWG-2A on May 7. ARRL Technical Relations Manager Paul Rinaldo, W4RI, was present and objected strongly to the inclusion of these two bands. He was told that objections should be submitted in written comments, and the ARRL did so on May 15. At the same time the ARRL advised the industry participants in IWG-2A along with its chairman, Warren Richards of the Department of State, that if we did not receive assurance that the bands would be dropped from the list of candidate bands we would have no choice but to advise members in July QST that the bands were under threat. No such assurances were forthcoming. Instead, we were told that as long as little LEO allocations requirements remained unsatisfied, everything had to remain on the table.

This response was not acceptable. Accordingly, when July QST went to the printer on Tuesday, May 28, it included the following editorial. The editorial speaks for itself, but it is worth emphasizing that there is no reason for panic. What we are dealing with is an ill-considered industry effort that is in its early stages; there is no reason to believe there is any government support for any move against these two amateur bands. Our mission is to quash the idea before it goes any further. An outpouring of thoughtful comment by amateurs, explaining why the public interest would not be served by the introduction of commercial services into these bands, will go a long way toward ensuring the desired outcome.

The editorial may be reprinted in its entirety with the credit line: "Reprinted with permission from July 1996 QST."

It Seems to Us, July 1996 QST:

Write Now! Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right--the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic." Here's what's happening, and what you can do about it.

The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee, or to Damon C. Ladson, the alternate federal officer." Hold that thought while we shift gears to the substance of the issue.

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile-satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests. At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate

bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected--the point being that some political, rather than purely technical, judgment already has influenced the list. Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television--the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that--both at the meeting and in a followup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile-satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again. Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; e-mail choliday@fcc.gov; fax 202-418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; e-mail richardswg@ms6820wpoa.us-state.gov; fax 202-647-7407.

Tracey Weisler, FCC Rep, IWG-2A, International Bureau, FCC, Washington, DC 20554; e-mail tweisler@fcc.gov; fax 202-418-2824.

Mary Kay Williams, Final Analysis, Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD 20770; fax 301-474-3228.

Leslie Taylor, President, LTA, 6800 Carlynn Ct, Bethesda, MD 20817; e-mail ltaylor@lta.com; fax 301-229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97 home page at http://www.fcc.gov/ib/wrc97/. Write now. Right now!--David Sumner, K1ZZ

KENWOOD ANNOUNCES NEW DISTRIBUTION CHANNELS

Longing for a new Kenwood TS-870S or maybe a TM-733? Soon, you might find them in your local CB shop or truck stop. Citing concerns about the future of Amateur Radio and a changing business climate, Kenwood Communications Corp announced to its dealers on May 21 it's taking "some bold steps" to turn things around. Kenwood has appointed three new companies (as yet unnamed) to wholesale Kenwood Amateur Radio products "to CB radio stores, truck stops, 2-way radio stores, and electronic re-sellers," according to a letter to its dealer network.

Kenwood says it believes its new distribution strategy will benefit the hobby by increasing the visibility of its Amateur Radio line through small dealers to help draw newcomers into the hobby.

The company also says it plans to offer a new pamphlet or "primer" about Amateur Radio to introduce people to the hobby. The primer will be free. In addition, Kenwood will start selling Amateur Radio study guides and has urged its authorized dealer network to help distribute the new materials. In conjunction with its Kenwood Report--distributed to ham radio clubs--the company also plans to offer "incentives for local clubs to gain new members using the Kenwood Amateur Radio primer and licensing materials." In a May 28 letter to authorized dealers, Kenwood described the moves as "our first stage of activities to promote Amateur Radio."

Kenwood says the extra step in the new distribution chain will guarantee that existing authorized dealers always have a price advantage over the smaller resellers. The company also denied rumors that it plans to exit the Amateur Radio market.

> : math - it's pretty clear that it wouldn't work without them).
>
> I suggest you try doing the calculations again. It would be easier than
> Amateur VHF/UHF moonbounce communication - for a variety of reasons.
>
> Bill

Assumptions:

- Distance of Moon = 3.6 x 10^8 Meters
- Laser Pulse Power = 10^6 Watts
- Diameter of Laser Spot on Moon = 10 Kilometers
- Albedo of Moon Surface = 0.05
- Collecting Area of Receiving Telescope = 3 Square Meters (ie, a pretty big telescope with a 2 meter diameter mirror)

The laser pulse illuminates a spot on the moon without a retroreflector. The light emerging from the illuminated spot has lost coherence and collimation. A spot 10KM in diameter on the Moon is small when viewed from the Earth. Thus, for practical purposes, it is a point source of light, shining equally in all directions possible from the Moon's surface (ie, a half sphere of illumation).

Calculations:

Given the Albedo of the Moon, the power of the reflected light is:

1) 10^6 Watts * 0.05 = 5 x 10^4 Watts

The area of the shell of illumation reaching the Earth's distance is:

2) 2 * Pi * (3.6 x 10^8)^2 ~= 8.5 x 10^17 Square Meters (a half sphere)

The collecting area of the receiving telescope is 3 Square Meters. Thus, the ratio of collected light to total light is:

3) 3 / 8.5 x 10^17 ~= 3.5 x 10^-18

Thus, the power of the collected energy is:

4) 5 x 10^4 * 3.5 x 10^-18 ~= 1.8 x 10^-13 Watts

Summary:

Without retroreflectors, using a one megawatt illuminating laser and a two meter diameter collecting telescope, the power received from the Moon is 0.18 Picowatts.

Unlike for radio frequencies, there are no tuned resonant antenna/receiver systems with detectors that I know of for light frequencies. Thus, this energy must be detected directly. Even with the retroreflectors (which essentially preserve collimation and coherence), one counts the returning photons (that's not really an exaggeration!).

Bill, where have I erred in my assumptions/calculations? How is this easier than VHF/UHF moonbounce? Please list your variety of reasons?

Cheers,

Chris

About 10 minutes...actually it took me almost 9 years to get motivated
to upgrade from OLD-TECH to ADVANCED, and I did it in one evening's time
at a VE session. 10 minutes for the Element 1b, almost didnt make it..I
had just 6/10 on the questions (all fill-in, not multiple choice!) BUT
I did have close to 3 minutes of PERFECT copy. So..I passed. Then the
VE said:"Psst! Wanna take your 3b tonite too? No extra charge." Passed
it with a 100%!

Actual time spent studying for the 13WPM? About 5 weeks, using the W5YI
Morse Academy program on my PC and some on the air practice and QSOs.

The ADVANCED written was much easier!

I'm new (actually reborn) into the amateur radio hobby. Just upgraded my 15 year old Novice license so I can play on VHF. I've read a lot and listened a lot but heard a comment on the radio last night I can't find any reference to. A fellow was having a problem keying up a repeater (and was quickly talking on the tails of another user). The successful user told the other fellow that he need to enter a "PL of 1414". What the heck is a PL??? I understand CTCSS and DTMF but have never seen or heard reference to a PL.

Thanks

WB7VSG (old newbie)

At a fairly low sky temperature, a low noise receiver will detect several orders of magnitude weaker signal than this.

<<lots o' stuff deleted>>

>--Well, you can enjoy world-wide, independant communication on HF with
> simple, inexpensive, low-powered, and even homebuilt equipment.
>
> Frankly, I would get more satisfaction working a station 1000 miles
> distant on 40 meters, with 25 watts CW and a long wire antenna, with
> a transmitter I built myself.
>
> VHF and UHF seem so pre-packaged and unchallenging.

If you simply buy an HT and sit on a local repeater, then there
is little/no challenge. Guess what... there isn't much challenge
in buying a pre-built HF rig, coax with connectors already soldered
on, and a pre-made dipole either.

You can homebrew on the VHF/UHF/uwave bands too, although it takes
a bit more skill to get started. I can build a 40 meter CW QRP
rig with stuff in my closet, but getting a 10 GHz transverter
working is a challenge!

BTW, I've got a lousy antenna on 1296, but even I managed to work
a few hundred miles on 3 watts, SSB. 1000 miles with 25 watts
on 40 is VERY disappointing. You should be working DX with less
than 1 watt, HI! There are MANY challenges in ham radio if you're
willing to look for them.

I can definitely help, but first you need to establish that you are legally permitted to transmit outside of the amateur bands using a non-type accepted transmitter. If you have a MARS or other military station license, you can visit a Kenwood dealer with your permit and they will provide you with the mod.

If not, pay attention to the public notice reproduced below. These types of notices usually mean some forthcoming action from the FCC. We shall see if they order the manufacturers to stop building amateur radios capable of being opened up for all band TX. This may finally be the start of new enforcement action to control illegal operation of amateur equipment.

PUBLIC NOTICE
FEDERAL COMMUNICATIONS COMMISSION
1919 M STREET NW
WASHINGTON, D.C. 2055462882

News media information 202/418-0500.
Recorded listing of releases and texts 202/418-2222.

May 13, 1996

Extended Coverage High Frequency Transceivers

The purpose of this Public Notice is to clarify the Commission's Rules regarding equipment that is intended to operate in various radio services in the high frequency radio spectrum, including "10-Meter" Amateur Radio Service (ARS) equipment.

The Commission has noted that a number of transceivers imported as ARS equipment are also capable of transmitting and are being operated in nearby frequency bands allocated to other radio services such as the Private Land Mobile Radio Services, Maritime Services, Auxiliary Broadcast Services, International Broadcasting Services, the Citizens Band Radio Service, and the U.S. Government. Operation of this equipment causes interference to the authorized users of these frequencies. Some of these transceivers are capable of using output powers or emission types which

are not permitted for the radio services listed above and some are capable of transmitting in the radio astronomy band where no two-way radiocommunication is permitted. Some manufacturers are promoting the sale of conversion kits, or have designed their transceivers such that they can easily be modified by the users, to extend the operating frequency range into the frequency bands listed above. In addition, so called "export" radios which are deliberately designed to facilitate this capability are also being imported and marketed.

Manufacturers, importers, vendors and users of these transceivers are reminded that transmitters intended for operation on frequencies allocated to any of the FCC authorized radio services listed above, except the ARS, must be type accepted by the Commission for the particular radio service(s) in which they are intended to operate prior to their importation, marketing or use. The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range. Transmitters designed and intended for use only in the ARS must comply with the applicable technical standards contained in Part 97 of the Commission's Rules but are not required to be type accepted.

It is a violation of the Commission's regulations to:
(1) import or market a transmitter that is designed or intended to operate on frequencies outside of the ARS bands, if it has not been issued a grant of equipment authorization for the radio service(s) in which the transmitter is capable of operating;
(2) import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued; or,
(3) transmit on a frequency allocated to a licensed radio service without the appropriate Commission-issued station license.
Violation of the Commission's regulations will subject manufacturers, importers, vendors and users of this equipment to appropriate criminal penalties as provided for by federal law(s), including fines and/or imprisonment. In addition, the equipment described above can be seized by, and forfeited to, the government.

For further information concerning this Public Notice, contact Gary Hendrickson at the FCC Laboratory, 7435-A Oakland Mills Road, Columbia, Md. 21046, (301) 725-1585, Extension 223, or E-mail: ghendric@fcc.gov.

The discussion is about detection at OPTICAL wavelengths. If you do indeed mean this (thus confusing me about the reference to sky temperature), then what type of receiver would detect such low level visible light energy?

Cheers,

Chris

2355. Complaints against jammers...

Newsgroup: rec.radio.amateur.misc
Date: 1996-05-31 00:00:00 UTC
From: starwind@dal1820.computek.net
Message-ID: <4olj7n$edn@news2.texas.net>
Source record: 224286

This is being posted in an attempt to gather information for a friend, who is being falsely acused of jamming an Amateur Emergency Services [used for RACES, ARES and to assist law enforcement in the area with things like searches, etc] Repeater. He is a licenced amateur operator and even participates in the above organizations. However, several of the people int eh organizations do not like him personally and so have decided that he wil be the scapegoat.

The repeater IS being jammed by SOMEONE. The people who have DF'd to attempt to find the jammer have managed to do so to within about 5 miles of my friend's house. They have decided that *HE* is the one doing it.

The Official Observer for the area [who also does not like him personally] has called him and told him he has enough "evidence" to report him to the FCC and that the OO is going to do so. My friend has being fighting the accusations for a few years now [they have never goneso far as to report him, just accuse him to himself and otehrs of being the jammer], and at this point is so fed up he is planing on mailing his licence back to the FCC and selling all his radio equipment. OF course, the jamming will continue once that happens, but he will no longer be a ham. He has no money to fight a legal battle against them.

My first question is, once the OO files the complaint, what exactly wil happen? Will the FCC themselves DF to find out who is jamming, or wil they just go by the OO's word [apparently deliberately falsified reports ahve been made by that OO and his gang of friends in the past against totally innocent people, and the people gave up rather then try to fight, so the FCC is not even aware that anything was flasified]?

What recourse does my friend have, either administratively or through legal channels?

IS he presumed innocent until conclusively proven guilty [i.e. caught in the act or a an impartial FCC DF'er DF's to his house], or is the onus on him to prove he is NOT doing the jamming??

Are there any resources that anyone can suggest that my friend can utilize, or people he can contact? Can the ARRL help at all, or are they going to automatically be on the side of the OO and his gang?

Any suggestions or advice greatly appreciated. Although I will be readingthis group, email replies [even if copies of posts] are appreciated as my ISP sporadically carried articles...

Thanks,

SW

73 Magazine used to impress me. It was a viable alternative to
CQ's contest and award oriented view and offered something different
from QST. At one time I was a subscriber but took offense to a
"contract" that was offered on the table of contents page and
cancelled my subscription (late '80's).
Since that time I have bought less than a dozen copies at the
news stand and saw no reason to purchase the following issue. It seems
that Wayne no longer has the intensity of his earlier days and his
publication is not worth spending the occasional $3.95(?) for. His
editorials (the few that I have read recently) seem to glorify his
experiences and abilities of the past and bear no relevance to today.
The tech and construction articles leave a lot to be desired. Why is
an annual antenna issue required when it merely rehashes the same old
old? Two transistor crystal-controlled transmitters and regenerative
receivers for HF are not the construction articles I look for.
The N2NSD/1 I used to feel I knew has passed on leaving an
empty shell. I regret this apparent fact and can only thank God he
doesn't spend his time posting his editorial comments to
rec.radio.amateur.misc.
Wayne, I am sincerely sorry it has come this.

hi,

i am 36 years old, i live near Louisville, Ky (Greenville, IN, zip 47122). i have worked with electronic equipment including radio, aircraft nav, computers, and sats for about 16 years. i am a college grad and have about 8 hrs in classes from the EE dept. as a kid i knew code.

i have never had an amateur license, but i would like to get one now. i have 2 very young boys and they may be interested in radio some day.

i am new to this area and don't know anyone here. how do i go about taking a test for a license? which test should i study for? i don't think i'll be erecting any 160 m antennas. tests on electronic stuff don't scare me. i would have to relearn morse code.

thanks a bunch for any help or links to someone else who can.

No, because they commercial interests have the money to buy both the politicians and enforcement. If they were awarded the frequencies, they could simply buy enough politicians to pass a law requiring mandatory 20 year prison sentences for anyone convicted of interfering with their communications. I am willing to bet, with even light enforcement, that there are not many amateurs who would be willing to take the risk.

Ralph Lindberg & Ellen Winnie <dragonsl@scn.org> wrote:
> Once more we see a non-US ham who has problems with the name boatanchor,
>and has to have the term explained.

Hi again Ralph,
There are 700,000+ US hams, and more than one million outside the US. To expect every one of them to have heard the word BA (or homebrew, or DX, or packet) is expecting *way* too much. If only 1% in the US (7000) are familiar with a particular term, even that many could jam up a so-named newsgroup. But to counter you comment, I've noted several non-US hams who were overjoyed to hear that a BA group was being discussed.

A group's FAQ is usually the very first article that appears when one enters that group for the first time (the FAQs are either given a looooong expiration date or remain until superceeded by an updated one). The first-time reader is supposed to peruse the FAQ prior to posting - those that don't do create a bit of noise but so what? Someone@somewhere just posted a beer article to rec.radio.amateur.homebrew. It's really no big deal - an email gently asking the person to read the FAQ suffices.

Also, the terms BA, DX, homebrew, et al, aren't meant to target *every* person interested in radio.

>I still think r.r.a.antique should be acceptable. For the most part these
>radios are antique, but then so is a Ford Model T. But that doesn's stop
>people from using it either.

1. When does a radio become an antique? Is there a cut off date? My Galaxy GT-550 is a mid 60s rig. Is it an antique? It certainly falls under the catagory of BA. Are 50s era radios antiques? Most of the discussions on the BA list concern rigs of the 50s and 60s. These radios are used daily by their owners - in most cases these rigs are the *primary* station radios. [My Puch 10-speed bike was made in 1965 - is it an antique?]

2. There is already a radio group that contains the name antique: rec.antiques.radio+phono, and our topics are *not* welcome on that group (check its charter).

>In closing, yes Jeff (KH2PZ/KH6) I have owned several 'boatanchors'
>through the years; old military gear, Drake Twins, and a Drake TR6
>(still the best SSB 6meter rig ever made). Also I am a Tech, so what, I've
>also been a ham for over 25 years.

Hmmmmm, I believe you said you weren't familiary with the word BA in a previous message... I know you said your wife had never heard of the

term. But again, a rec.radio.amateur newsgroup is not meant to target *every* ham. For 20 years I've only operated CW. Years went by before I had heard of the word "packet" - just wasn't intereted in it. Yet wasn't there group dedicated to it?

How many folks on the r.r.a.misc group know that there is a .policy group that was created just for the code debate? (Not many judging by its continuence on .misc!)

How many V/UHF-only techs know what homebrew means? HF lends itself very well to building but a newly licensed Tech who has never held a soldering iron before wouldn't know what homebrew means.

And how many V/UHF-only techs who only own an HT to talk on the local repeater would know what DX means?

Again (and again!), a particular group is not meant to target *every* ham worldwide.

>I also know a -lot- more then you do about newsgroup creation (I've been
>the group proponent for several newsgroups). One of the things I know that
>you obviously don't is that I need support, which I wouldn't get by

>newsgroup creation.

No insult was intended - I'm sorry that you took it that way. I'm just unhappy that folks for whom the newsgoup is not intended for are threatening to vote NO rather than just ABSTAIN.

Keep in mind that the BA email list generates at least 70 articles per day which is more than many rec.radio.amateur groups (.policy, .homebrew .antenna).

Hi again, Ralph,
Have you (or your wife) ever heard of the term "top band"? 160 meters has been called that for decades and decades, and there is a thriving email list with that name (50+ emails per day).

We've all got our little niches of interest that others in the hobby are not even aware of.

I tend to disagree on this point. What's the cost of yet another newsgroup? There are people who would enjoy discussing the topic in their own space, what's the big problem?

[snip]

I've learned quite a few lessons about newsgroup creation and, frankly, I wonder if the present system is broken, or at least needs improvement?

I also notice that this discussion is slowing, as all do. I understand that the RFD should commence shortly, so it looks like a good time for all of us to cool down until the formal discussion begins.

Just as a sidenote, I notice that the newsgroup rec.radio.amateur.dx passed by a large margin. No doubt there was a lot of heated debate about that name, as well.

As I found out from the boatanchors mailing list, having tubes does not
a boatanchor make. My oldest equipment, which is still very
operational, is the vintage Drake R-4/T-4X twins (no suffix here) but
I understand that it does not qualify as a boatanchor. Doesn't bother
me, as long as it still works. :-)

Actually, I've been a ham since 1966, and I never heard the term
"topband" until I found the mailing list of the same name. Of course,
I've never operated on that band, either.

I had also never heard the term "Elmer" but it was exactly this person,
a neighbor down the street, who initially interested me in ham radio,
and saw me through my Novice, General and Advanced licenses in the
space of two years.

2379. It's *Gotta* Be "Boatanchors"!

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-01 00:00:00 UTC
From: Dick Dillman <ddillman@igc.apc.org>
Message-ID: <APC&1'0'92ecea44'3b3@igc.apc.org>
Source record: 224061

I may be a late comer to the debate, but I'd like to weigh in on the question of a new newsgroup devoted to boatanchors.

I understand the debate centers around the use of the term "boatanchors" in the newsgroup name. Perhaps some think the term is not widely understood or may cause confusion or maybe that it's simply inappropriate.

To me, the debate is similar to the entry into the dictionary of a new word that is in fact in common usage. But such new entries are what cause the language to grow and evolve. The fact is that the term "boatanchor", used to mean a classic piece of communications equipment, is in common and ever increasing usage.

As to the term being appropriate, it's true that "boatanchor" has been used as a term of derision for old, outdated, obsolete equipment that no one would want. But, much in the way Americans of the revolution adopted the derisive term "yankee doodle" used by the British and made it their own, boatanchor enthusiasts have adopted the term for the gear they love.

This equipment may indeed be old and obsolete. But plenty of people want it - just check the increasing prices it demands. After all, a Deusenberg is an old and obsolete car and a DC-3 is an old and obsolete plane but, representing as they do the best in their particular fields, people fork over great sums to possess restored models of each.

My point is this: the term "boatanchor" is not only acceptable in polite Usenet company, it is *the* single name that describes what the newsgroup is about. It should be, without question in my opinion, included in the newsgroup name.

Best Regards,

Dick Dillman

Just an observation:

Has anyone noticed that there has been no one to come forward all through this thread to defend W2NSD? I guess that really means he is losing it. Hell, in his (and my) younger days, there would have been a bunch of name calling and flames about this topic. Now it's just pity and contempt for a man who is obviously going senile.

Sure. 3880, 3885, 7290, 7295, 14286 to name a few. Give it a try.
If you have a linear, you can use it also. Be sure to only drive it
so that at dead carrier, you only have about 25% output from the
linear. For example, if your linear is capable of 1500 watts output
PEP, only drive your linear so that you produce a 250 watt carrier.
Your modulation will take you to the legal limit.

Also be sure that your linear can handle the key-down carrier output.

You may have to attenuate the output from your exciter. If you need
specs for an attenuator, I'll be glad to send you a copy of the
article I wrote for Electric Radio.

I have used a Drake L4B with success, along with others.

You'll need about a 100 watt carrier to be heard under most
circumstances. 250-350 will be aplenty.

Good luck, and "See you on the radio."

73, Steve, WB4IJN

Especially since any non-verbal mode (packet, tor, rtty, ssty, etc.)
has the same "advantage".

The Mirage amplifier has apparently been around before the April 1978
date that type acceptance became a requirement, and are grandfathered.
Have a look at the specifics in Part 97...

Oh Im sorry...I have to take exception with this! There is NO reason for
a 'roger-beep'...if you cant tell when the other station has unkeyed - you
should find another hobby! The only two reasons those damn things exist is
to 1) Seperate the foolish from their money 2) Annoy those listening, usually
on 11m but Ive found an alarming share of Amateurs who seem to think highly

of their use - probably ex-CBers who havent outgrown the fetish!

Get real! Do you really believe that, given the literally MILLIONS of amateur operators currently occupying 2m and 70cm, another service would even be considered for approval to use the frequencies in question. Even if the unthinkable happened...that these frequencies were taken from amateurs and given over to commercial interests, do you actually think that those same MILLIONS of amateurs will simply say "Oh, too bad", throw their equipment away, and cease operations? Uh, no...I don't think so.

2397. State Dept hostility to hams

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-01 00:00:00 UTC
From: wf3h@enter.net
Message-ID: <4ooav0$99u@news.enter.net>
Source record: 224137

I called one of the people identified as being involved in the possible reallocation of our freqs today. This was Warren Richards, head of IWG-2A. Since I have headed professional committees myself, and know that the chair sometimes does not agree with committee action, I was cordial, explaining that I was calling to get information and express my concern.

This guy was EXTREMELY hostile and arrogant. He said that the ARRL was spreading "bullshit" by going "outside of channels" and appealing directly to its membership. I explained that, as a citizen, I had a right to express my opinion. His reply was that he wasn't interested in the opinions of hams. In addition, he complained about our attempts to "intimidate" him, and the number of "goddamn" emails he's received. He also said that our frequencies will continue to be considered for reallocation.

Im not sure what's going on with the government, but if this is a representative section of people who work for US we've got a problem!

Well....I certainly thought SOMEONE out there would have found my original letter (actually sent of course) unreasonable. It seems thst the prevelant response is that I've been naive for years.

Perhaps that's true, but Wayne has had some reasonable things to say not too many years ago...and he has in years gone by offered an interesting counterpoint to the League (of which I am also a member). Perhaps I just like to support fellow New Hampshirites..I don't know.

Anyway....the thread got longer than anticipated. Funny how no one from 73 responded, if I get anything by mail I'll post it.

Hi Pat, Oh I have absolutely nothing to hide at all! In fact, I'm all
for warrantless search and seizures. My home and computer are open to
the feds or locals at any time they care to check. We need to give law
enforcement *much* more power than they currently have.

You say the the owner of that .sig line works for the police - he's a
dispatcher, Pat, not a police officer. I find it contradictory that
he receives his paycheck from the police yet he displays so much fear
of them (as shown in his .sig).

Have a great weekend!

>signals may be coming from New York state.

>Any one else heard this garbage?

>Jack, WB8BFS, Cincinnati...

Been hearing it for years. Hong Kong cab drivers, and in Indonesia,
10 meters *is* the CB band. I even had one guy from Australia call
me a few years back, and when I ask him his call he replied with
something like 'Road Runner 69'. When I explained to him that I
couldn't talk to him if he was not a licensed amateur, he proceeded
to read me the riot act about how screwed up 'yanks' are......

The United States doesn't have problem with bootleggers on the ham
bands when you compare it to S.E. Asia. In Hong Kong you can buy
two meter equipment in any drug store and they people selling it have
no idea what it is. In the Philippines, there are one hundred fold
more bootleggers on two meters than there are hams, and if you put
up an amateur radio repeater you must constantly fight to keep the
slims off of it. Japan has big time problems with slims on VHF/UHF
also. Loads of fishing boats on 10 meter FM, etc.,etc.,etc.......

We have had a few people migrate to ten meters in Guam from lower
frequencies, including the installation of a few simplex auto patches.
The greyhound track here decided 146.00 would be a great frequency
for their 'business' radios, so they bought a bunch of HT's and gave
that a shot for a year or so also. Since Guam is so small we didn't
have much trouble solving those type of problems as it very easy
to locate the source of the problem.

Anyway, not at all supprised at what you are hearing. If the band
gets open to out here, you will really have something to complain
about.

Isn't it interesting that this was released AFTER the Dayton HamVention...

A proposal like this requires planning time. It looks like the other
side has done its research on the way amateurs are organized, at least
so far as Dayton in concerned.

The next major ham convention is the HamCom, at Arlington, Texas.
(I regret a long term prior commitment for this date keeps me from being
there on Friday & Saturday.)

To help hams with the letter writing campaing recommended by the ARRL.

I have taken the liberty to write down some information that anyone can use in their FCC letter opposing any realocation of the 2 meter or 70 cm bands. The material is available at my web site. The information is provided to help those of you (including myself) who at times have some difficulty getting throughts down on paper. Feel free to use what you like, and if you would like to add some additional letter writing copy, just e-mail it to me and I will add it to the web page.

I have also established e-mail links to allthe FCC commissioners that are listed as the critical decision makers on this issue by the ARRL.

> Exactly. The whole proposal seems VERY impractical, doesn't it?

What makes this whole thing unbelievable is the equipment issue. When we lost 11m, lots of equipment got retuned for 10m. When we lost 220-222, everyone just moved to the top of that band. If they take away 2m & 70cm, what can we do with the equipment? Sell it? To WHOM?

Let's not forget the manufacturers! Are we supposed to believe that Alinco, Icom, Kenwood, Standard and Yaesu are going to let the government take away the majority of thier buisness? NOT!

Either this whole issue is some kind of flame bait joke or someone is taking a statement WAY out of context!

A few years ago, Radio Nederland carried a program on numbers stations. In addition, swl mags like "monitoring times" and "popular communications" routinely carry articles on them.

These stations are run by various intelligence services throughout the world. Mossad, Israeli Intelligence, for many years ran one right in the middle of the ham 30 meter band which I used to copy here at WF3H. The US intelligence services also run them, as does Cuban Intelligence.

Our intelligence services have several tx's in Florida which are used for this purpose, using both spanish and english. Four and five number groups are sent by us or cuba (i forget which is which).

Some of these msgs are actually encoded instructions to operatives in various countries, and some are just "dummies" to throw off listeners.

These stations were far more common during the cold war, and the guerrilla wars were raging in central america.

>-Drew in Sunny Central Florida-

Drew, if y ou get some facts straight, I think you'll see why this is
a problem.

First, there are only about 600,000 hams in the US, some of whom are
inactive.

Second, there are a number of precedents for this...consider:

1. US taxpayers support the cattle industry by having the industry
graze on federal lands at a FRACTION of what it would cost these guys
to graze on private lands

2. US taxpayers support the mining industry to the tune of BILLIONS of
dollars by giving away mining rights to federal property at 2 or 3
dollars per acre due to old homesteading laws. The industry has fought

successfully to keep this.

3. The US taxpayer supports the timber industry by having the US Forest Service build roads for the timber companies at NO expense to them so they can log in federal lands.

The LEO industry has MONEY MONEY MONEY. What else do they need. The state dept has already told me that hams, literally, are a goddamn nuisance, and they dont CARE what we say.....

2420. Why the threat is real

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-01 00:00:00 UTC
From: wf3h@enter.net
Message-ID: <4opjdl$j0d@news.enter.net>
Source record: 224160

A number of hams have expressed skepticism as to whether the proposed reallocation of our bands is real. Yes it is, and this is why.

First, the State Dept, which is pushing this, has already told me personally that they dont CARE what our opinion is. When I talked with Mr warren richards on Friday 5/31 he said our concerns were "bullshit" and we were a "goddamn" nuisance. Plain enough for you?

Second the US taxpayer already provides giveaways to business in a number of forms:

1. The US Forest Service builds road at TAXPAYER expense to allow the timber industry to log in federal lands.

2. The mining industry gets mineral rights for 2 or 3 dollars per acre for rights worth BILLIONS of dollars due to outmoded homesteading laws. The industry has successfully fought changes in this for years.

3. The cattle industry grazes its cattle on federal lands at a FRACTION of what it costs on private lands.

The govt has already said they dont give a DAMN about our opinions. We are only 600,000 hams. The LEO industry has MONEY MONEY MONEY.

Who do you think will win if push comes to shove?

"PL" Stands for the trademark sqelch system from motorola - "Private Line".
It is the same as CTCSS or sub audible tones. The number you heard refers to
the standard tone of 141.4hz.

Hmmmm WB7VSG - We'll beatup 7 very small gerbals? :-)

While the above is certainly true, it doesn't justify wanting a
newsgroup name that you have to explain.

>>I don't like to see again those posts about my rig is better than yours;
>>yours is dog s??t; toss it overboard ("boatanchor"). Whit this kind of
<snip>
>Perhaps you don't quite understand the concept of a "boatanchor?"
Once more we see a non-US ham who has problems with the name boatanchor,
and has to have the term explained.

I still think r.r.a.antique should be acceptable. For the most part these
radios are antique, but then so is a Ford Model T. But that doesn's stop
people from using it either.

In closing, yes Jeff (KH2PZ/KH6) I have owned several 'boatanchors'
through the years; old military gear, Drake Twins, and a Drake TR6
(still the best SSB 6meter rig ever made). Also I am a Tech, so what, I've
also been a ham for over 25 years.
I also know a -lot- more then you do about newsgroup creation (I've been
the group proponent for several newsgroups). One of the things I know that
you obviously don't is that I need support, which I wouldn't get by
insulting the people who could help me. Like the Hams involved in
newsgroup creation.

Good morning. It's Sunday the 2nd of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start this week with news from Geoff Brown, GJ4ICD, of some spectacular Sporadic E openings on 6 and 2 metres. Thursday the 23rd saw one of the biggest Sporadic E events ever during the month of May. In the afternoon the 6 metre band came alive with signals from the Eastern Mediterranean and the Canary Islands. At 1430 UTC the 2 metre band opened to Italy and the Balkans. And last Monday Geoff had an S9 contact with TR8CA in Gabon, West Africa, on 6 metres SSB at 1654 UTC. He believes this contact was by multi-hop Sporadic E. More about Sporadic E in the solar factual data at the end of the national news.

Three new RSGB QSL Bureau sub-managers have recently been appointed. The sub-manager for the G0Y and G0Z series of callsigns is Frank Stanbridge, G3PZS. He is also the sub-manager for the G0X series. For the new M0A series of calls, Bob Hamer, G0MOK, has been appointed sub-manager, whilst in Scotland, Fred Roe, GM0ALS, is the sub-manager for the MM0A to MM0L series of callsigns. The addresses of G3PZS, G0MOK and GM0ALS are correct in the RSGB Call Book.

From Sunday the 16th of June, the Tyne/Tees area GB2RS 2 metre FM broadcast will be at 9.00am instead of 10.00am. This broadcast, from the station of G0IID, has G4OLK as the first reserve newsreader, and is on 2 metres channel S21.
